# 1 Revision Record

Issue Number	Issue Date	Revision History
A	29 January 2021	Original

# 2 Summary

TEST REPORT NUMBER:	TRA-048544-47-05A
WORKS ORDER NUMBER:	TRA-048544-05
PURPOSE OF TEST:	USA: Testing of radio frequency equipment per the relevant authorization procedure of chapter 47 of CFR (code of federal regulations) Part 2, subpart J.
TEST SPECIFICATION(S):	47CFR15.247
EQUIPMENT UNDER TEST (EUT):	JCB Livelink 4
FCC IDENTIFIER:	ТВС
EUT SERIAL NUMBER:	DGG64967
MANUFACTURER/AGENT:	Microlise Engineering Limited
ADDRESS:	Farrington Way Eastwood Nottingham Nottinghamshire NG16 3AG United Kingdom
CLIENT CONTACT:	Craig White ☎ 01773 537000 ⊠ craig.white@microlise.com
ORDER NUMBER:	PO804323
TEST DATE:	2020-10-15 to 2020-10-23
TESTED BY:	D Moncayola S Garwell Element

#### 2.1 Test Summary

Test Method and Description		47CFR15	Applicable to this equipment	Result / Note	
Radiated spurious emissions (restricted bands of operation and cabinet radiation)		15.205	$\boxtimes$	Pass	
AC power line conducted emissions		15.207		Note 1	
Occupied bandwidth		15.247(a)(2)	$\boxtimes$	Pass	
Conducted carrier power	Peak	15 247(b)(2)	$\boxtimes$	Page	
	Max.	13.247(0)(3)		F 835	
Conducted / radiated RF power out-of-band		15.247(d)	$\boxtimes$	Pass	
Power spectral density, conducted		15.247(e)	$\boxtimes$	Pass	
Calculation of duty correction		15.35(c)		Note 2	

## Notes:

- 1- Battery powered device, it is not going to be connected to the mains.
- **2-** Duty ≥ 98 %

The results contained in this report relate only to the items tested, in the condition at time of test, and were obtained in the period between the date of initial receipt of samples and the date of issue of the report.

The apparatus was set up and exercised using the configurations, modes of operation and arrangements defined in this report only. Any modifications made are identified in Section 8 of this report.

Particular operating modes, apparatus monitoring methods and performance criteria required by the standards tested to have been performed except where identified in Section 5.2 of this test report (Deviations from Test Standards).

## 4 Introduction

This report TRA-048544-47-05A presents the results of the Radio testing on a Microlise Engineering Limited, JCB Livelink 4 to specification 47CFR15 Radio Frequency Devices.

The testing was carried out for Microlise Engineering Limited by Element, at the address detailed below.

Element Hull	$\boxtimes$	Element Skelmersdale
Unit E		Unit 1
South Orbital Trading Park		Pendle Place
Hedon Road		Skemersdale
Hull		West Lancashire
HU9 1NJ		WN8 9PN
UK		UK

This report details the configuration of the equipment, the test methods used and any relevant modifications where appropriate.

All test and measurement equipment under the control of the laboratory and requiring calibration is subject to an established programme and procedures to control and maintain measurement standards. The quality management system meets the principles of ISO 9001, and has quality control procedures for monitoring the validity of tests undertaken. Records and sufficient detail are retained to establish an audit trail of calibration records relating to its test results for a defined period. Under control of the established calibration programme, key quantities or values of the test & measurement instrumentation are within specification and comply with the relevant traceable internationally recognised and appropriate standard specifications, which are UKAS calibrated as such where these properties have a significant effect on results. Participation in inter-laboratory comparisons and proficiency testing ensures satisfactory correlation of results conform to Elements own procedures, as well as statistical techniques for analysis of test data providing the appropriate confidence in measurements.

Throughout this report EUT denotes equipment under test.

FCC Site Listing:

Element is accredited for the above sites under the US-EU MRA, Designation number UK0009.

IC Registration Number(s): Element Hull 3483A Element North West 3930B

The test site requirements of ANSI C63.4-2014 are met up to 1GHz.

The test site SVSWR requirements of CISPR 16-1-4:2010 are met over the frequency range 1 GHz to 18 GHz.

# **5** Test Specifications

#### 5.1 Normative References

- FCC 47 CFR Ch. I Part 15 Radio Frequency Devices.
- ANSI C63.10-2013 American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices.
- ANSI C63.4-2014 American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz.

#### 5.2 Deviations from Test Standards

There were no deviations from the test standard.

# 7 Equipment Under Test

#### 7.1 EUT Identification

- Name: JCB Livelink 4
- Serial Number: DGG64967
- Model Number: 728/J8518
- Software Revision: V 1
- Build Level / Revision Number: A

#### 7.2 System Equipment

Equipment listed below forms part of the overall test setup and is required for equipment functionality and/or monitoring during testing. The compliance levels achieved in this report relate only to the EUT and not items given in the following list.

Not Applicable – No support/monitoring equipment required.

#### 7.3 EUT Mode of Operation

#### 7.3.1 Transmission

The mode of operation for transmit tests was as follows...

The unit was transmitting permanently modulated carrier on a selected channel with a duty cycle  $\ge$  98%.

#### 7.4 EUT Radio Parameters

#### 7.4.1 General

Frequency of operation:	2402 MHz to 2480 MHz
Modulation type(s):	GFSK
Supported Data Rate(s):	1 Mbps only
Occupied channel bandwidth(s):	2 MHz
Channel spacing:	2 MHz
Declared output power(s):	0 dBm
Antenna type(s) and gain(s):	Integral PCB, 0 dBi
Nominal Supply Voltage:	27 Vdc

#### 7.5 EUT Description

The EUT is a tracking device with multiple wireless technologies. This report covers Bluetooth low energy.

# 8 Modifications

No modifications were performed during this assessment.

# 9 EUT Test Setup

#### 9.1 Block Diagram

The following diagram shows basic EUT interconnections with cable type and cable lengths identified:

## 9.2 General Set-up Photograph

The following photograph shows basic EUT set-up:

#### 9.3 Measurement software

Where applicable, the following software was used to perform measurements contained within this report.

Element Emissions R5 (See Note) Element Transmitter Bench Test (See Note) ETS Lindgren EMPower V1.0.4.2

Note:

The version of the Element software used is recorded in the results sheets contained within this report.

## **10** General Technical Parameters

#### 10.1 Normal Conditions

The E U T was tested under the normal environmental conditions of the test laboratory, except where otherwise stated. The normal power source applied 27 V dc from the adaptor.

#### 10.2 Varying Test Conditions

There are no specific frequency stability requirements for the type of device. The results contained in this report demonstrate that the occupied bandwidth is contained within the authorised band and the manufacturer has declared sufficient frequency stability (refer to section 7.4).

Variation of supply voltage is required to ensure stability of the declared output power. During carrier power testing the following variations were made:

	Category	Nominal	Variation
	Mains	110 V ac +/-2 %	85 % and 115 %
$\boxtimes$	Battery	New battery	N/A

# 11 Radiated emissions

#### 11.1 Definitions

#### Spurious emissions

Émissions on a frequency or frequencies, which are outside the necessary bandwidth and the level of which may be reduced without affecting the corresponding transmission of information. Spurious emissions include harmonic emissions, parasitic emissions, intermodulation products and frequency conversion products, but exclude out-of-band emissions.

#### Restricted bands

A frequency band in which intentional radiators are permitted to radiate only spurious emissions but not fundamental signals.

## 11.2 Test Parameters

Test Location:	Element Skelmersdale
Test Chamber:	SK03 Radio Chamber
Test Standard and Clause:	ANSI C63.10-2013, Clause 6.5 and 6.6
EUT Frequencies Measured:	2402 MHz, 2440 MHz, 2480 MHz
EUT Channel Bandwidths:	2 MHz
Deviations From Standard:	None
Measurement BW:	30 MHz to 1 GHz: 120 kHz
Measurement Detector:	Up to 1 GHz: 1 MHz Above 1 GHz: quasi-peak Above 1 GHz: RMS average and Peak

#### **Environmental Conditions (Normal Environment)**

Temperature: 22 °C	+15 °C to +35 °C (as declared)
Humidity: 44 % RH	20 % RH to 75 % RH (as declared)
Supply: 27 V dc	27 V dc (as declared)

#### 11.3 Test Limit

Unwanted emissions that fall within the restricted frequency bands shall comply with the limits specified:

# General Field Strength Limits for License-Exempt Transmitters at Frequencies above 30 MHz

Frequency (MHz)	Field Strength (μV/m at 3 m)		
30 to 88	100		
88 to 216	150		
216 to 960	200		
Above 960	500		

#### 11.4 Test Method

With the EUT setup as per section 9 of this report and connected as per Figure i, the emissions from the EUT were measured on a spectrum analyzer / EMI receiver.

Radiated electromagnetic emissions from the EUT are checked first by preview scans. Preview scans for all spectrum and modulation characteristics are checked, using a peak detector and where applicable worst-case determined for function, operation, orientation, etc. for both vertical and horizontal polarisations. Pre-scan plots are shown with a peak detector and 100 kHz RBW.

If the EUT connects to auxiliary equipment and is table or floor standing, the configurations prescribed in ANSI C63.10 are followed. Alternatively, a layout closest to normal use (as declared by the provider) is employed, (see EUT setup photographs for more detail).

Emissions between 30 MHz and 1 GHz are measured using calibrated broadband antennas. Emissions above 1 GHz are characterized using standard gain horn antennas. Pre-amplifiers and filters are used where required. Care is taken to ensure that test receiver resolution bandwidth, video bandwidth and detector type(s) meet the regulatory requirements.

For both horizontal and vertical polarizations, the EUT is then rotated through 360 degrees in azimuth until the highest emission is detected. At the previously determined azimuth the test antenna is raised and lowered from 1 to 4 m in height until a maximum emission level is detected, this maximum value is recorded.

Power values measured on the test receiver / analyzer are converted to field strength, FS, in  $dB\mu V/m$  at the regulatory distance, using:

$$FS = PR + CL + AF - PA + DC - CF$$

Where,

PR is the power recorded on the receiver / spectrum analyzer in dBµV;

CL is the cable loss in dB;

AF is the test antenna factor in dB/m;

PA is the pre-amplifier gain in dB (where used);

DC is the duty correction factor in dB (where used, e.g. harmonics of pulsed fundamental);

CF is the distance factor in dB (where measurement distance different to limit distance);

This field strength value is then compared with the regulatory limit.

Upper Radiated Band Edge - Peak / Average

# 12 Occupied Bandwidth

#### 12.1 Definition

The emission bandwidth (x dB) is defined as the frequency range between two points, one above and one below the carrier frequency, at which the spectral density of the emission is attenuated x dB below the maximum in-band spectral density of the modulated signal.

#### 12.2 Test Parameters

Test Location:	Element Skelmersdale
Test Chamber:	Radio Lab
Test Standard and Clause:	ANSI C63.10-2013, Clause 11.8
EUT Channels / Frequencies Measured:	Low / Mid / High
EUT Channel Bandwidths:	2 MHz
EUT Test Modulations:	GFSK
Deviations From Standard:	None
Measurement BW:	100 kHz
Spectrum Analyzer Video BW: (requirement at least 3x RBW)	300 kHz
Measurement Span: (requirement 2 to 5 times OBW)	3 MHz
Measurement Detector:	Peak

#### **Environmental Conditions (Normal Environment)**

Temperature: 25 °C	+15 °C to +35 °C (as declared)
Humidity: 40 % RH	20 % RH to 75 % RH (as declared)
Supply: 27 Vdc	27 V dc (as declared)

#### 12.3 Test Limit

The minimum -6 dB bandwidth shall be at least 500 kHz.

#### 12.4 Test Method

With the EUT setup as per section 9 of this report and connected as per Figure iii, the bandwidth of the EUT was measured on a spectrum analyser.

The measurements were performed with EUT set at its maximum duty. All modulation schemes, data rates and power settings were used to observe the worst-case configuration in each bandwidth.

#### Figure iii Test Setup

# 13 Maximum peak conducted output power

#### 13.1 Definition

The maximum peak conducted output power is defined as the maximum power level measured with a peak detector using a filter with width and shape of which is sufficient to accept the signal bandwidth.

The maximum conducted output power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signaling alphabet when the transmitter is operating at its maximum power control level.

## 13.2 Test Parameters

Test Location:	Element Skelmersdale
Test Chamber:	Radio Lab
Test Standard and Clause:	ANSI C63.10-2013, Clause 11.9.1
EUT Channels / Frequencies Measured:	Low / Mid / High
EUT Channel Bandwidths:	2 MHz
Deviations From Standard:	None
Measurement BW:	2 MHz
Spectrum Analyzer Video BW: (requirement at least 3x RBW)	10 MHz
Measurement Detector:	Peak
Voltage Extreme Environment Test Range:	Mains Power = 85 % and 115 % of Nominal (FCC only requirement); Battery Power = new battery.

#### **Environmental Conditions (Normal Environment)**

Temperature: 25 °C	+15 °C to +35 °C (as declared)
Humidity: 40 % RH	20 % RH to 75 % RH (as declared)

#### 13.3 Test Limit

For systems employing digital modulation techniques operating in the bands 902 to 928 MHz, 2400 to 2483.5 MHz and 5725 to 5850 MHz, the maximum peak conducted output power shall not exceed 1 W.

#### 13.4 Test Method

With the EUT setup as per section 9 of this report and connected as per Figure iv, the resolution bandwidth of the spectrum analyser was increased above the EUT occupied bandwidth and the peak emission data noted.

The measurements were performed with EUT set at its maximum duty. All modulation schemes, data rates and power settings were used to observe the worst-case configuration in each bandwidth.

# 14 Out-of-band and conducted spurious emissions

#### 14.1 Definition

#### Out-of-band emission.

Emission on a frequency or frequencies immediately outside the necessary bandwidth that results from the modulation process but excluding spurious emissions.

Spurious emission.

Émission on a frequency or frequencies that are outside the necessary bandwidth and the level of which may be reduced without affecting the corresponding transmission of information. Spurious emissions include harmonic emissions, parasitic emissions, intermodulation products, and frequency conversion products, but exclude out-of-band emissions.

## 14.2 Test Parameters

Test Location:	Element Skelmersdale
Test Chamber:	Radio Lab
Test Standard and Clause:	ANSI C63.10-2013, Clause 11.11
EUT Channels / Frequencies Measured:	Low / Mid / High
EUT Channel Bandwidths:	2 MHz
Deviations From Standard:	None
Measurement BW:	100 kHz
Measurement Detector:	Peak
Measurement Range:	30 MHz to 26.5 GHz

#### **Environmental Conditions (Normal Environment)**

Temperature: 25 °C	+15 °C to +35 °C (as declared)
Humidity: 40 % RH	20 % RH to 75 % RH (as declared)
Supply: 27 Vdc	27 Vdc (as declared)

#### 14.3 Test Limit

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided that the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of root-mean-square averaging over a time interval, the attenuation required shall be 30 dB instead of 20 dB. Attenuation below the general field strength limits specified in FCC 47CFR15.209(a) / RSS-Gen is not required.

#### 14.4 Test Method

With the EUT setup as per section 9 of this report and connected as per Figure v, the emissions from the EUT were measured on a spectrum analyser.

The measurements were performed with EUT set at its maximum duty. All modulation schemes, data rates and power settings were used to observe the worst case configuration in each bandwidth.

# 15.3 Test Limit

The transmitter power spectral density conducted from the transmitter to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

#### 15.4 Test Method

With the EUT setup as per section 9 of this report and connected as per Figure vi, the peak emission of the EUT was measured on a spectrum analyser, with path losses taken into account.

The measurements were performed with EUT set at its maximum duty. All modulation schemes, data rates and power settings were used to observe the worst case configuration in each bandwidth.

# **16 Measurement Uncertainty**

## **Calculated Measurement Uncertainties**

All statements of uncertainty are expanded standard uncertainty using a coverage factor of 1.96 to give a 95 % confidence:

#### [1] Radiated spurious emissions

Uncertainty in test result (30 MHz to 1 GHz) = **4.75 dB** Uncertainty in test result (1 GHz to 18 GHz) = **4.46 dB** 

#### [2] AC power line conducted emissions

Uncertainty in test result = 3.2 dB

#### [3] Occupied bandwidth

Uncertainty in test result = 15.58 %

#### [4] Conducted carrier power

Uncertainty in test result (Power Meter) = 0.93 dB

#### [5] Conducted RF power out-of-band

Uncertainty in test result – up to 8.1 GHz = **3.31 dB** Uncertainty in test result – 8.1 GHz to 15.3 GHz = **4.43 dB** 

#### [6] Radiated RF power out-of-band

Uncertainty in test result (30 MHz to 1 GHz) = **4.75 dB** Uncertainty in test result (1 GHz to 18 GHz) = **4.46 dB** 

#### [7] Power spectral density

Uncertainty in test result (Spectrum Analyser) = 3.11 dB

#### [8] ERP / EIRP

Uncertainty in test result (Laboratory) = **4.71 dB** Uncertainty in test result (Pershore OATS) = **4.26 dB**
