

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup*	 A photograph showing a conducted emission test setup. On the left, a piece of electronic equipment (likely a spectrum analyzer or noise meter) sits on a light-colored wooden bench. A power supply unit is connected to the equipment and plugged into a wall outlet. A power strip is also visible on the bench. The background is a plain wall.
Radiation Emission Test Setup (Below 30MHz)	 A photograph showing a radiation emission test setup. A yellow cardboard box is placed on a rotating turntable inside an anechoic chamber. The chamber's walls are covered with white, square-shaped absorbers. A metal frame is positioned around the box, and a small metal container is on the floor of the chamber. The floor has yellow and black striped safety markings.

Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test setup for the 30MHz to 1GHz range. A yellow test chamber is positioned on a grey floor. To the left, a metal frame with several vertical rods and a horizontal bar is visible. The background wall is covered with white, square-shaped absorbers. A yellow and black striped caution tape is on the floor.
Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test setup for the 1GHz to 18GHz range. A yellow test chamber is positioned on a grey floor. In the foreground, there is a large, dark blue, conical-shaped absorber. A red, triangular-shaped absorber is also visible. A green cable is connected to the test chamber. The background wall is covered with white, square-shaped absorbers.

**Radiation Emission Test
Setup (Above 18GHz)**

*** Means' only test and setup for PART 15C .**
