Product Specifications

Model number	DC820
product name	DASH CAM
Features	WiFi dash cam
Colour	custom made
Camera lens	High-resolution ultra wide-angle Camera lens
Language	English, Japanese, French, Italian, German, Spanish, Thai Russian, Chinese (simplified 、Traditional), Korean, etc.
file format	MOV/MP4
Continuous loop recording	Seamless loop recording, do not leak seconds
Motion detection	Support
Year Month Day points	Support
Carrier media	Built-in memory (total: 64MB)
Camera mode	800W
Photo format	JPEG
Storage card	TF (recommended more than 10-speed, capacity 8G-128G TF card)
Microphone	Support

Built-in audio	Support
Infrared night vision	Support
Power Interface	5V 2 A

Troubleshooting:

Under normal operating conditions, if the products have problems, please refer to the solution:

1, Could not take photos, video Check TF card whether there is enough space, whether locked.

2, When recording, it will automatically stop Because of huge high-definition video data, use SDHC compatible high-speed TF card, high-speed TF card will be C10 identity.

3, Replay pictures and videos, the "File" prompt An error occurred when TF card memory data, resulting in incomplete files, use the Car DVR "Format" function, reformat the card.

4. The image is foggy

Please check the lens for dirt and finger prints. Before shooting, wipe the lens with lens paper.

5. The recorder does not work. You can press the reset key with a sharp object and then start it again to restore normal.

6. Open the network access permission for the first time, and open the local photo album

7. If the mobile phone cannot be connected to the product, first of all, check whether the mobile phone is connected to other WiFi hotspots. The app can only be connected to the recorder when the WiFi in the mobile phone settings is connected to the recorder (for example, at home, it is found that the recorder cannot be connected, so it is necessary to check whether the WiFi signal in the mobile phone settings is connected to the WiFi in the home)

8. The real-time picture of the mobile phone is stuck, which is generally related to the WiFi signal. For example, when the mobile phone is too far away from the recorder, the WiFi signal is weak, and the real-time picture of the mobile phone will get stuck. In addition, if there are too many WiFi signals around the recorder, it will also interfere with the recorder and cause the real-time picture to jam

9. The preview speed in the album is very slow. It may be that there are too many video files in the TF card, resulting in the timeout of obtaining file information. Consumers are advised to format TF cards regularly

10. record appearance many clients connect to it. But only one mobile phone can be used to link at the same time. If it is found that the mobile phone cannot be connected to the recorder, it should be ruled out whether the recorder is connected to other mobile phones

11. Use the computer to play video recordings:

The product uses H.264 compression format The file type is mov or MP4 format. Many Microsoft Windows computers' built-in playback software bodies (such as Windows Media Player) do not support H.264 encoding format It may not be able to play, or the playing of the movie is not smooth, the frame is fixed or broken, or the video and audio are not synchronized. It is recommended to download other professional playing software (such as potplayer, etc.).

FCC Warning

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference
received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection
against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause
harmful interference to radio communications. However, there is no guarantee that interference will not   occur in a particular installation. If this equipment does cause harmful interference to radio or television   reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-Reorient or relocate the receiving antenna.
-Increase the separation between the equipment and receiver.

-Connect the equipment into an outlet on a circuit different from that to which the receiver is

connected. -Consult the dealer or an experienced radio/TV technician for help.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.
