MPE Calculation / RF Exposure

Product: Entry AVN

Applicant: MOTREX CO.,LTD.

Model: INE-W970HD

Address: Seoyoung Bldg., 25, Hwangsaeul-ro 258beon-gil, Bundang-gu, Seognam-si, Gyeonggi-do, Korea

FCC ID: BP9-INEW970HD

The FCC requires that the calculated MPE be equal to or less than a given limit dependent on frequency at a distance of 20 cm from the device to the body of the user. According to §2.1091, §2.1093 and §1.1307(b), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Classfication The antenna of this product is at least 20 cm away from the body of the user. So this product is

classified as mobile device.

 $S = EIRP/4 \pi R^2$

Where S = Power density

EIRP = Effective Isotropically Radiated Power

R = distance to the centre of radiation of the antenna

Values S = 1.0 mW/cm² for General population uncontrolled exposure (FCC Part 1.1310 Radiofrequency

radiation exposure limits)

 $S = 1.0 \text{ mW/cm}^2$

PT(BDR/EDR) = -1.43 dBm (0.72 mW): measured maximum output power

G = Antenna gain = -0.17 dBi (0.962 in linear terms)

EIRP = PT x G R = 20 cm

Calculation EIRP(BDR/EDR) = $0.72 \times 0.962 = 0.69 \text{ mW}$

 $S(BDR/EDR) = 0.69/12.56 \times (20)^2 = 0.69/5024$

 $S(BDR/EDR) = 0.00014 \text{ mW/cm}^2$

Conclusion This confirms compliance to the required radio frequency radiation exposure limit of 1.0

mW/cm² at 20 cm operation.
