a	Power transfer frequency is less that 1 MHz →The power transfer frequency is set from 110kHz to 205kHz. Therefore the frequency specification is satisfied with the device.
b	Output power from each primary coil is less than 5 watts →The maximum output power of each coil is less than 5 watts.
c	The transfer system includes only single primary and secondary coils. This includes charging systems that may have multiple primary coils and clients that are able to detect and allow coupling only between individual pairs of coils →The DUT(Device Under Test) includes only one coil in transmitter. A secondary coil is detected and coupled by transmitter.
