To Whom It May Concern::

This letter is to provide justification for the mobile device categorization of Intermec Technologies Corp. Model 700C. Model 700C is a penkey computer intended for business and industrial markets in data gathering applications such as warehouse inventory tracking, parcel delivery tracking etc. The product does not have a QWERTY style keypad, and is too small for laptop applications. At the same time, as can be seen in the attached picture, it is too big to be used in regular cell phone type applications. Although it contains a speaker and a microphone, those features along with body-worn accessories such as holster, belt clip etc. have been disabled or left out in the current configuration. As configured, it can only be used in handheld computing applications using the display or the laser scan engine for data entry. Wireless transmission needs to be activated via on-screen commands. Because of that and the product's size, it cannot transmit while in a person's pocket.

In addition, user documents provided with each product contain strong caution statements specifically prohibiting body-worn applications.

If you have any questions, regarding this application, please feel free to contact me (phone: 425 356 1765, fax: 425 348 2633, email: carl.turk@intermec.com).

Sincerely,

Carl K. Turk, MSEE
Sr. EMC Engineer
Intermec Technologies Corp.
