5	TV monitor	SONY	KV-13M31(400825)	Verification

Note:

- *1: The personal computer was operated with an AC Adaptor (Model No. PA3282U-2ACA) supplied by Toshiba Corporation.

-Table 2, Peripherals for Wireless LAN communication

Kind of Equipment	Manufacturer or Distributor	Model No. (Serial No.)
Personal computer	Toshiba	PPM30N(35031444HJ)
Access point	NETGEAR	JWAGR614(861622400073)

Note: These peripherals were used for only Wireless LAN communication mode (Data C). These were set up so that it is not affected to the result, to the most distant position (the right corner of turntable side in the Anechoic chamber) from a measurement antenna.

-Table 3, Connecting information for peripherals and cables

Connector name of		Peripherals (Equipment No. * ¹)			Interface cable information			
EUT	PC	Data			Cable type	Connector type	Length [m]	Description
		A	B* ²	C* ²				
USB port	-	1	1	1	Shielded	Metallic	1.2	USB cable
Headphone jack	-	2	-	2	Shielded	Metallic	1.2	Headphone cable
		-	5	-	Unshielded	Metallic	1.4	AV cable
-	Printer port	3	-	-	Shielded	Metallic	1.5	Printer cable
-	Serial port	4	-	-	Shielded	Metallic	1.2	Tablet cable

Note:

*¹ The Equipment numbers refers to the Table 1.

*² In these modes (Data B and C), this EUT can not send and receive any signals across the USB cable.
So PC which has regulator function is used as AC adaptor under measurement.
Hence, Subpart B measurement is performed without peripheral device of PC

1.3.3. Operating power supply

These measurements for all equipment were performed by 120Vac/ 60Hz power supply.

2. COMMENT ON THE MEASUREMENT

2.1. Measurement methodology

Both conduction and radiation measurement are performed in accordance with the procedures in ANSI 63.4-2003.

2.2. Deviation from standard

None

2.3 Measurement procedure

During the evaluation measurement, all available modes, all cabling and peripheral layouts were arranged to achieve the "WORST" case emissions.

The exploratory and final measurements were performed under the conditions (mode of operation and configuration) of EUT determined by evaluation measurement.

At least six highest emissions relative to the limits were recorded at the final measurement.

2.3.1. Conduction measurement

The investigated frequency range was 150 kHz to 30 MHz.

The exploratory measurement was made by peak detector function to determine the emission characteristics of the EUT. Based on the exploratory measurement, the one EUT cable configuration and arrangement and mode of operation that produces the emission with the highest amplitude relative to the limit is selected for the final measurement. The final measurement was made by quasi-peak and average detector function.

The signal output port of the LISN (Model No. KNW341C) for peripherals was terminated with a 50-ohms termination.

The measurement is in accordance with section 7 (AC line conducted emission measurements) in ANSI C63.4-2003.

2.3.2. Radiation measurement

The investigated frequency range was 30 MHz to 12.5 GHz.

The radiation measurement was performed at the measurement distance of 3 meter.

The exploratory measurement was made by peak detector function to determine the emission characteristics of the EUT. Based on the measurement results of the exploratory measurement, the one EUT, cable and wire arrangement, and mode of operation that produces the emission that has the highest amplitude relative to the limit is selected for the final measurement. The final measurement was made by quasi-peak (If above 1GHz, average and peak) detector functions.

This investigation is performed with the EUT rotated 360 degree, the antenna height scanned between 1m and 4m, and the antenna rotate to repeat the measurement for both the horizontal and vertical antenna polarizations.

The measurement is in accordance with section 8 (Radiated emission measurements) in ANSI C63.4-2003.

2.4. Measurement place

Both conduction and radiation measurement was performed in the Anechoic Chamber No.1.

- Table 4, measurement place -

Data	Conduction (150k - 30MHz)	Radiation (30M -1GHz)	Radiation (above 1GHz)
A to C	Anechoic Chamber No.1	Anechoic Chamber No.1	Anechoic Chamber No.1

2.5. Ambient condition

The ambient conditions at the time the measurement was conducted were as follows:

- Temperature / Relative humidity: Please see [Measurement Results] in this report.

2.6. Measurement Uncertainty

Derived from ISO Guide to the Determination of Uncertainties with a Coverage Factor K=2.
