

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Radiation Emission Test Setup (Below 30MHz)	 A photograph of a radiation emission test setup for frequencies below 30 MHz. A yellow test chamber is placed on a circular turntable, which is mounted on a metal frame. The chamber is surrounded by a dense array of white, square-shaped absorbers arranged in a grid pattern on the walls and floor of the test chamber. The floor has yellow and black diagonal safety stripes.
Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test setup for frequencies from 30 MHz to 1 GHz. A yellow test chamber is placed on a circular turntable, which is mounted on a metal frame. The chamber is surrounded by a dense array of white, square-shaped absorbers arranged in a grid pattern on the walls and floor of the test chamber. The floor has yellow and black diagonal safety stripes. In the foreground, there is a metal structure with several vertical rods, likely part of the test setup.

Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test setup for the 1GHz to 18GHz range. A white, rectangular test item is placed on a yellow wooden stand in the center of an anechoic chamber. The chamber walls are covered with white, square-shaped absorbers. The floor is covered with a dense layer of blue, conical-shaped absorbers. A red antenna is visible on the right side of the chamber.
Radiation Emission Test Setup (Above 18GHz)	 A photograph of a radiation emission test setup for frequencies above 18GHz. The setup is identical to the one in the first image, with a white test item on a yellow stand in the center of an anechoic chamber. However, a blue cable is connected to the test item, and a blue antenna is visible on the right side of the chamber.
