RF Exposure Evaluation Declaration

FCC ID: 2BCGWBE25

Applicant: TP-LINK CORPORATION PTE. LTD.

Product: BE5000 Whole Home Mesh Wi-Fi 7 System,

BE3600 Whole Home Mesh Wi-Fi 7 System

Model No.: Deco BE25, Deco BE23, Deco BE5000, Deco WB10800

Brand Name: tp-link

FCC Rule Part(s): FCC Part 2.1091

Result: Complies

Evaluation Date: 2025-04-11

1.4. Product Information

Product	BE5000 Whole Home Mesh Wi-Fi 7 System,			
	BE3600 Whole Home Mesh Wi-Fi 7 System			
Model No.	Deco BE25, Deco BE23, Deco BE5000, Deco WB10800			
Brand Name	tp-link			
Wi-Fi Specification	802.11a/b/g/n/ac/ax/be			
Antenna Information	Refer to Section 1.5			
Operating Temperature	0 ~ 40 °C			
Power Type	AC/DC Adapter			
Accessories				
Adapter #1	Model No.: T120150-2E4			
	Input: 100-240 V ~ 50/60 Hz, 0.6 A			
	Output: 12.0 V - 1.5 A			
Adapter #2	Model No.: T120150-2B4			
	Input: 100-240 V ~ 50/60 Hz, 0.6 A			
	Output: 12.0 V = 1.5 A			

Note: The information of EUT was provided by the manufacturer, and the accuracy of the information shall be the responsibility of the manufacturer.

Model Differences

Model	Differences					
Woder	Product name	Cover	Operating frequency			
Deco BE25	BE5000 Whole Home Mesh					
(Original)	Wi-Fi 7 System					
Deco BE23	BE3600 Whole Home Mesh	Same as Deco BE25	Close 240MHz BW via			
(Variant)	Wi-Fi 7 System	Same as Deco BE25	software			
Deco BE5000	BE5000 Whole Home Mesh	Cover with ripple	Same as Deco BE25			
(Variant)	Wi-Fi 7 System	Cover with ripple	Same as Deco BE25			
Deco WB10800	BE3600 Whole Home Mesh	Cover with ripple	Close 240MHz BW via			
(Variant)	Wi-Fi 7 System	Cover with ripple	software			

Note: The differences of models are as above, the other was the same.

1.5. Antenna Details

Antenna	Frequency Band	Tx	Antenna Gain		Beamforming	CDD Dir	ectional
Туре	(MHz)	Paths	(dBi)		Directional	Gain	(dBi)
			Ant 0 Ant 1		Gain	For	For
					(dBi)	Power	PSD
Dipole	2400 ~ 2483.5	2	2.00	2.00	5.01	2.00	5.01
Dipole	5150 ~ 5895	2	3.00	3.00	6.01	3.00	6.01

Note 1: The device supports CDD Mode and Beamforming Mode, details refer to the table as below.

Note 2: The device supports 2 N_{SS} and power level is the same of spatial multiplexing. The worst case is N_{SS}=1.

Note 3: For CDD Mode, directional gain is calculated as follows.

Directional Gain = G_{ANT Max} + Array Gain, where Array Gain is as follows.

• For power spectral density (PSD) measurements on all devices,

Array Gain = 10 log (N_{ANT}/ N_{SS}) dB;

• For power measurements on IEEE 802.11 devices,

Array Gain = 0 dB for $N_{ANT} \le 4$.

Note 4: For Beamforming Mode, the directional is calculated as follows.

Directional Gain = G_{ANT Max} + 10 log (N_{ANT}) dB.

Note 5: The information as above is from the antenna report.

1.6. Device Classification

According to the user manual, this device is classified as a Mobile Device. So, the RF exposure evaluation requirements of § 2.1091 for mobile device exposure conditions subject to MPE limits.

1.7. Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

FCC Part 2.1091 & KDB 447498 D04 Interim General RF Exposure Guidance v01

2. RF Exposure Evaluation

2.1. Limits

According to FCC §1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in §1.1307(b)

Limits For Maximum Permissible Exposure (MPE)

Frequency Range	Electric Field	Magnetic Field	Power Density	Average Time			
(MHz)	Strength (V/m)	Strength (A/m)	(mW/cm ²)	(Minutes)			
	(A) Limits for Occupational/ Control Exposures						
0.3-3.0	614	1.63	*(100)	≤6			
3.0-30	1842/f	4.89/f	*(900/f ²)	<6			
30-300	61.4	0.163	1.0	<6			
300-1,500			f/300	<6			
1,500-100,000			5	<6			
	(B) Limits for General Population/ Uncontrolled Exposures						
0.3-1.34	614	1.63	*(100)	<30			
1.34-30	824/f	2.19/f	*(180/f ²)	<30			
30-300	27.5	0.073	0.2	<30			
300-1,500			f/1500	<30			
1,500-100,000			1.0	<30			

f= frequency in MHz. * = Plane-wave equivalent power density.

2.2. MPE Exemptions

For single RF sources (i.e., any single fixed RF source, mobile device, or portable device, as defined in paragraph §1.1307(b)(2) of this section): A single RF source is exempt if:

(Option A) The available maximum time-averaged power is no more than 1 mW, regardless of separation distance. This exemption may not be used in conjunction with other exemption criteria other than those in paragraph §1.1307(b)(3)(ii)(A) of this section.

Medical implant devices may only use this exemption and that in paragraph §1.1307(b)(3)(ii)(A);

(Option B) Or the available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold P (mW) described in the following formula. This method shall only be used at separation distances (cm) from 0.5 centimeters to 40 centimeters and at frequencies from 0.3 GHz to 6 GHz (inclusive). P is given by:

$$P th(mW) = \{ERP_{20cm}(d / 20cm)^x d \le 20cm\}$$

$$P th(mW) = \{ERP_{20cm} 20cm < d \le 40cm\}$$

Where

$$x = -\log_{10}\left(\frac{60}{ERP_{20cm}\sqrt{f}}\right)$$
 and f is in GHz;

and

$$ERP_{20cm}(mW) = \{2040f \ 0.3GHz \le f < 1.5GHz\}$$

$$ERP_{20cm}(mW) = \{3060 \ 1.5GHz \le f \le 6GHz \}$$

(Option C) Or using Table 1 and the minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. For the exemption in Table 1 to apply, R must be at least $\lambda/2\pi$, where λ is the free-space operating wavelength in meters. If the ERP of a single RF source is not easily obtained, then the available maximum time-averaged power may be used in lieu of ERP if the physical dimensions of the radiating structure(s) do not exceed the electrical length of $\lambda/4$ or if the antenna gain is less than that of a half-wave dipole (1.64 linear value).

RF Source Frequency (MHz)	Threshold ERP (watts)
0.3-1.34	1920R ²
1.34-30	3450R ² /f ²
30-300	3.83R ²
300-1,500	0.0128R ² f
1,500-100,000	19.2R ²

For multiple RF sources: Multiple RF sources are exempt if:

- (A) The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required). This exemption may not be used in conjunction with other exemption criteria other than those is paragraph §1.1307(b)(3)(i)(A) of this section. Medical implant devices may only use this exemption and that in paragraph §1.1307(b)(3)(i)(A).
- (B) in the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^{a} \frac{P_i}{P_{th,i}} + \sum_{j=1}^{b} \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

Where:

a = number of fixed, mobile, or portable RF sources claiming exemption using paragraph §1.1307(b)(3)(i)(B) of this section for P_{th} , including existing exempt transmitters and those being added.

b = number of fixed, mobile, or portable RF sources claiming exemption using paragraph 1.1307(b)(3)(i)(C) of this section for Threshold ERP, including existing exempt transmitters and those being added.

c = number of existing fixed, mobile, or portable RF sources with known evaluation for the specified minimum distance including existing evaluated transmitters.

 P_i = the available maximum time-averaged power or the ERP, whichever is greater, for fixed, mobile, or portable RF source i at a distance between 0.5 cm and 40 cm (inclusive).

 $P_{th,i}$ = the exemption threshold power (P_{th}) according to paragraph §1.1307(b)(3)(i)(B) of this section for fixed, mobile, or portable RF source i.

 ERP_j = the ERP of fixed, mobile, or portable RF source j.

 $ERP_{th,j}$ = exemption threshold ERP for fixed, mobile, or portable RF source j, at a distance of at least $\lambda/2\pi$ according to the applicable formula of paragraph §1.1307(b)(3)(i)(C) of this section.

Evaluated_k = the maximum reported SAR or MPE of fixed, mobile, or portable RF source k either in the device or at the transmitter site from an existing evaluation at the location of exposure.

Exposure Limit_k = either the general population/uncontrolled maximum permissible exposure (MPE) or specific absorption rate (SAR) limit for each fixed, mobile, or portable RF source k, as applicable from §1.1310 of this chapter.

2.3. Calculated Result

Product	BE5000 Whole Home Mesh Wi-Fi 7 System
Test Item	RF Exposure Evaluation

Test Mode	Frequency Band	Conducted Power	Tune-up Power	Directional Gain	Tune-up EIRP
	(MHz)	(dBm)	(dBm)	(dBi)	(dBm)
802.11b/g/n/ax/be	2412 ~ 2462	27.25	27.75	5.01	32.76
802.11a/n/ac/ax/be	5180 ~ 5895	27.47	27.97	6.01	33.98

Note 1: Tune-up power was declared by manufacturer.

Note 2: Tune-up EIRP (dBm) = Tune-up Power (dBm) + Directional Gain (dBi).

For single RF source, Option B

Test Mode	λ/2π	R	Tune-up ERP	Threshold ERP
	(m)	(m)	(mW)	(mW)
Wi-Fi (DTS)	0.0198	0.2	1150.8	3060
Wi-Fi (NII)	0.0092	0.2	1524.1	3060

Note 1: R is from user manual.

Note 2: ERP (mW) = $10^{[(Tune-up EIRP(dBm)-2.15)/10]}$.

For multiple RF sources

The EUT supports Wi-Fi 2.4GHz + Wi-Fi 5GHz simultaneous transmissions.

So the Max Simultaneous Transmission = 1150.8/3060 (DTS) + 1524.1/3060 (NII) = 0.8741 < 1

CONCLUSION:

The device qualifies for RF exposure test exemption at 20cm distance.

The End
