#### FCC PART 15 SUBPART C TEST REPORT

#### **FCC PART 15.247**

Compiled by

( position+printed name+signature) .: File administrators Joan Wu

Supervised by

( position+printed name+signature) .: Project Engineer Zoey Cao

Approved by

( position+printed name+signature) .: RF Manager Eric Wang

Date of issue ...... Mar. 07, 2025

Testing Laboratory Name ...... Shenzhen CTA Testing Technology Co., Ltd.

Fuhai Street, Bao'an District, Shenzhen, China

Applicant's name...... Dongguan Jinhongmei Electronics Co.,Ltd

Guangdong Province, China

Test specification .....:

Standard FCC Part 15.247

#### Shenzhen CTA Testing Technology Co., Ltd. All rights reserved.

This publication may be reproduced in whole or in part for non-commercial purposes as long as the Shenzhen CTA Testing Technology Co., Ltd. is acknowledged as copyright owner and source of the material. Test item description ...... Bluetooth headset

Trade Mark .....: N/A

Manufacturer ...... Dongguan Jinhongmei Electronics Co.,Ltd

Model/Type reference ...... JHM-B1

Modulation ...... GFSK, Π/4DQPSK

Frequency ...... From 2402MHz to 2480MHz

Rating ...... DC 3.7V From battery and DC 5.0V From external circuit

Result ...... PASS

Page 2 of 48 Report No.: CTA25030501401

#### TEST REPORT

Equipment under Test Bluetooth headset

Model /Type JHM-B1

JHM-B2, JHM-B3, JHM-B4, JHM-B5, JHM-B6 Listed Models

Model difference The PCB board, circuit, structure and internal of these models are the

same, Only model number and colour is different for these model.

Dongguan Jinhongmei Electronics Co.,Ltd **Applicant** 

3/F, No.411, Keji Road, Sanxing Village, OingxiTown, Dongguan City, Address

Guangdong Province, China

Dongguan Jinhongmei Electronics Co.,Ltd Manufacturer

Address 3/F, No.411, Keji Road, Sanxing Village, OingxiTown, Dongguan City,

Guangdong Province, China

Test Result: PASS

The test report merely corresponds to the test sample.

It is not permitted to copy extracts of these test result without the written permission of the test CTATESTING laboratory.

#### TEST STANDARDS 1

The tests were performed according to following standards:

FCC Rules Part 15.247: Frequency Hopping, Direct Spread Spectrum and Hybrid Systems that are in operation within the bands of 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz. ANSI C63.10-2013: American National Standard for Testing Unlicensed Wireless Devices

Page 5 of 48 Report No.: CTA25030501401

# SUMMARY

#### 2.1 General Remarks

| Date of receipt of test sample |           | Mar. 03, 2025 |
|--------------------------------|-----------|---------------|
|                                | 1         |               |

Power supply system utilised

| Power supply voltage :     230V / 50 Hz     120V / 60Hz |         |      |  |  |  |  |  |  |
|---|---------|------|--|--|--|--|--|--|
|   |         | 0    | 12 V DC                                  |  |  |  |  |  |
| Other (specified in blank below)                        |         |      |  |  |  |  |  |  |
| DC 3.7  | 'V Fror | n ba | attery and DC 5.0V From external circuit |  |  |  |  |  |
|   |         |      |  |  |  |  |  |  |

#### **Short description of the Equipment under Test (EUT)**

This is a Bluetooth headset.

For more details, refer to the user's manual of the EUT.

#### 2.5 EUT configuration

The following peripheral devices and interface cables were connected during the measurement:

supplied by the manufacturer

| <ul> <li>supplied by the lal</li> </ul> | ov the lab | ł | plied | - sup | $\bigcirc$ |

#### **EUT** operation mode 2.6

The Applicant provides communication tools software(Engineer mode) to control the EUT for staying in continuous transmitting (Duty Cycle more than 98%) and receiving mode for testing .There are 79 channels CTATES provided to the EUT and Channel 00/39/78 were selected to test.

**Operation Frequency:** 

| Channel | Frequency (MHz) |
|---------|-----------------|
| 00      | 2402            |
| 01      | 2403            |

# **Block Diagram of Test Setup**

#### Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for the device filing to comply with Section 15.247 of the FCC Part 15, Subpart C Rules.

#### 2.9 **Modifications**

CTATESTING No modifications were implemented to meet testing criteria.

Page 7 of 48 Report No.: CTA25030501401

# TEST ENVIRONMENT

## Address of the test laboratory

#### Shenzhen CTA Testing Technology Co., Ltd.

Room 106, Building 1, Yibaolai Industrial Park, Qiaotou Community, Fuhai Street, Bao'an District, Shenzhen, China

#### 3.2 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### FCC-Registration No.: 517856 Designation Number: CN1318

Shenzhen CTA Testing Technology Co., Ltd. has been listed on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements.

Shenzhen CTA Testing Technology Co., Ltd. has been listed by American Association for Laboratory
Accreditation to perform electromagnetic emission measurement

#### **CAB identifier: CN0127** ISED#: 27890

Shenzhen CTA Testing Technology Co., Ltd. has been listed by Innovation, Science and Economic Development Canada to perform electromagnetic emission measurement.

The 3m-Semi anechoic test site fulfils CISPR 16-1-4 according to ANSI C63.10 and CISPR 16-1-4:2010.

#### 3.3 Environmental conditions

CTA TESTING During the measurement the environmental conditions were within the listed ranges:

#### Radiated Emission:

| tadiated Efficient    |              |
|-----------------------|--------------|
| Temperature:          | 24 ° C       |
|                       |              |
| Humidity:             | 45 %         |
|                       |              |
| Atmospheric pressure: | 950-1050mbar |

#### AC Power Conducted Emission:

| Temperature:          | 25 ° C       |
|-----------------------|--------------|
| TES!"                 |              |

#### Remark:

- The measurement uncertainty is not included in the test result. 1.
- We tested all test mode and recorded worst case in report

#### 3.5 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to TR-100028-01" Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 1" and TR-100028-02 "Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 2 " and is documented in the Shenzhen CTA Testing Technology Co., Ltd. quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for Shenzhen CTA Testing Technology Co., Ltd.:

| Test                   | Range       | Measurement<br>Uncertainty | Notes |
|------------------------|-------------|----------------------------|-------|
| Radiated Emission      | 9KHz~30MHz  | 3.02 dB                    | (1)   |
| Radiated Emission      | 30~1000MHz  | 4.06 dB                    | (1)   |
| Radiated Emission      | 1~18GHz     | 5.14 dB                    | (1)   |
| Radiated Emission      | 18-40GHz    | 5.38 dB                    | (1)   |
| Conducted Disturbance  | 0.15~30MHz  | 2.14 dB                    | (1)   |
| Output Peak power      | 30MHz~18GHz | 0.55 dB                    | (1)   |
| Power spectral density | /           | 0.57 dB                    | (1)   |

Page 9 of 48 Report No.: CTA25030501401

| Spectrum bandwidth                       | /          | 1.1%    | (1) |
|--|------------|---------|-----|
| Radiated spurious emission (30MHz-1GHz)  | 30~1000MHz | 4.10 dB | (1) |
| Radiated spurious emission (1GHz-18GHz)  | 1~18GHz    | 4.32 dB | (1) |
| Radiated spurious emission (18GHz-40GHz) | 18-40GHz   | 5.54 dB | (1) |

<sup>(1)</sup> This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

# 4 TEST CONDITIONS AND RESULTS

#### 4.1 AC Power Conducted Emission

#### **TEST CONFIGURATION**

#### **TEST PROCEDURE**

- 1 The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10-2013.
- 2 Support equipment, if needed, was placed as per ANSI C63.10-2013
- 3 All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10-2013
- 4 The EUT received power from adapter, the adapter received AC120V/60Hz and AC 240V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
- 5 All support equipments received AC power from a second LISN, if any.
- 6 The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7 Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.
- 8 During the above scans, the emissions were maximized by cable manipulation.

#### **AC Power Conducted Emission Limit**

For intentional device, according to § 15.207(a) AC Power Conducted Emission Limits is as following:

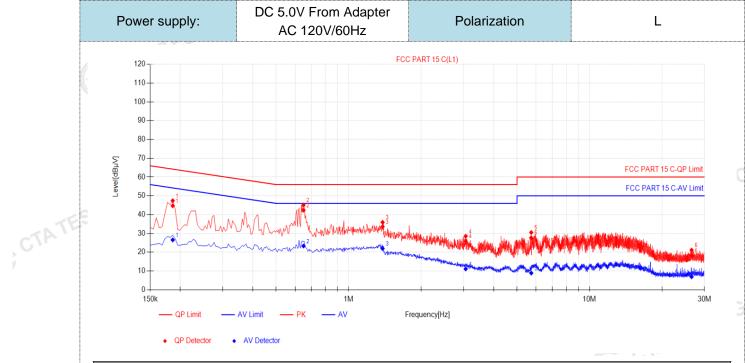

| Fraguency range (MHz)                         | Limit (    | dBuV)     |
|---|------------|-----------|
| Frequency range (MHz)                         | Quasi-peak | Average   |
| 0.15-0.5                                      | 66 to 56*  | 56 to 46* |
| 0.5-5   | 56         | 46        |
| 5-30  | 60         | 50        |
| * Decreases with the logarithm of the frequen | ncy.       |           |

#### **TEST RESULTS**

#### Remark:

1. All modes of GFSK,  $\Pi/4$  DQPSK were test at Low, Middle, and High channel; only the worst result of GFSK Middle Channel was reported as below:

#### 4.2 **Radiated Emission**

#### **TEST CONFIGURATION**

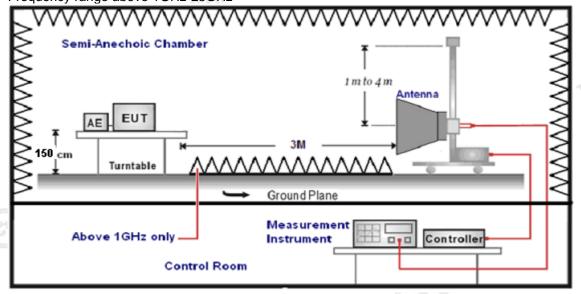

Frequency range 9 KHz – 30MHz

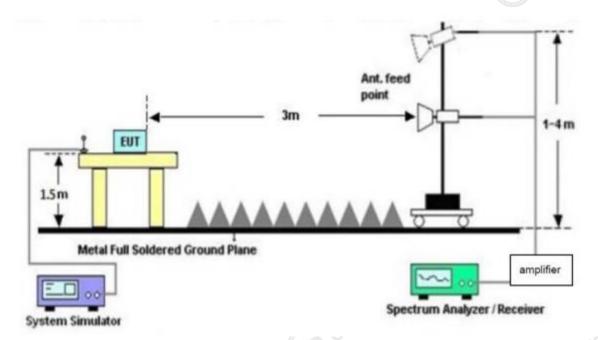

Frequency range 30MHz - 1000MHz

Page 15 of 48 Report No.: CTA25030501401

#### **TEST PROCEDURE**

- 1. The EUT was placed on a turn table which is 0.8m above ground plane when testing frequency range 9 KHz -1GHz; the EUT was placed on a turn table which is 1.5m above ground plane when testing frequency range 1GHz - 25GHz.
- 2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0° to 360° to acquire the highest emissions from EUT.
- And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- Repeat above procedures until all frequency measurements have been completed.
- Radiated emission test frequency band from 9KHz to 25GHz.
- 6. The distance between test antenna and EUT as following table states:

| Test Frequency range | Test Antenna Type          | Test Distance |
|----------------------|----------------------------|---------------|
| 9KHz-30MHz           | Active Loop Antenna        | 3             |
| 30MHz-1GHz           | Ultra-Broadband Antenna    | 3             |
| 1GHz-18GHz           | Double Ridged Horn Antenna | 3             |
| 18GHz-25GHz          | Horn Anternna              | 1             |

Setting test receiver/spectrum as following table states:

| Test Frequency range | Test Receiver/Spectrum Setting  | Detector |
|----------------------|---|----------|
| 9KHz-150KHz          | RBW=200Hz/VBW=3KHz,Sweep time=Auto  | QP       |
| 150KHz-30MHz         | RBW=9KHz/VBW=100KHz,Sweep time=Auto   | QP       |
| 30MHz-1GHz           | RBW=120KHz/VBW=1000KHz,Sweep time=Auto  | QP       |
| 1GHz-40GHz           | Peak Value: RBW=1MHz/VBW=3MHz,<br>Sweep time=Auto<br>Average Value: RBW=1MHz/VBW=10Hz,<br>Sweep time=Auto | Peak     |

#### Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor(if any) from the measured reading. The basic equation with a sample calculation is as follows:

#### FS = RA + AF + CL - AG

| Where FS = Field Strength | CL = Cable Attenuation Factor (Cable Loss) |
|---------------------------|--|
| RA = Reading Amplitude    | AG = Amplifier Gain                        |
| AF = Antenna Factor       | a cTA '                                    |

Transd=AF +CL-AG

Report No.: CTA25030501401 Page 16 of 48

#### RADIATION LIMIT

For intentional device, according to § 15.209(a), the general requirement of field strength of radiated emission from intentional radiators at a distance of 3 meters shall not exceed the following table. According to § 15.247(d), in any 100kHz bandwidth outside the frequency band in which the EUT is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the100kHz bandwidth within the band that contains the highest level of desired power.

The pre-test have done for the EUT in three axes and found the worst emission at position shown in test setup photos.

|          | Frequency (MHz) | Distance<br>(Meters) | Radiated (dBµV/m)                | Radiated (μV/m) |

|          | Above 960       | 3                    | 54.0                             | 500             |

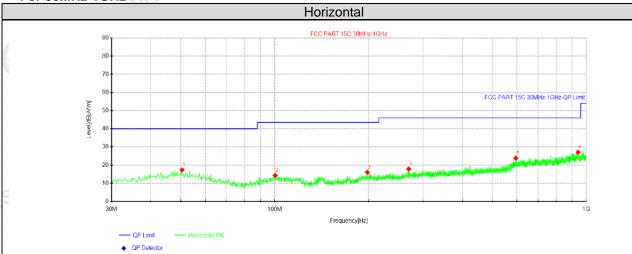

#### **TEST RESULTS**

#### Remark:

- This test was performed with EUT in X, Y, Z position and the worse case was found when EUT in X position.
- 2. We measured Radiated Emission at GFSK, π/4 DQPSK mode from 9 KHz to 25GHz and recorded worst case at GFSK DH5 mode.
- For below 1GHz testing recorded worst at GFSK DH5 middle channel.
- Radiated emission test from 9 KHz to 10th harmonic of fundamental was verified, and no emission found CTA TESTING except system noise floor in 9 KHz to 30MHz and not recorded in this report.

Page 20 of 48 Report No.: CTA25030501401

- 1. Emission level (dBuV/m) =Raw Value (dBuV)+Correction Factor (dB/m)
- 2. Correction Factor (dB/m) = Antenna Factor (dB/m)+Cable Factor (dB)- Pre-amplifier
- 3. Margin value = Limit value- Emission level.
- 4. -- Mean the PK detector measured value is below average limit.
- 5. The other emission levels were very low against the limit.

#### Results of Band Edges Test (Radiated)

Note: GFSK, π/4 DQPSK all have been tested, only worse case GFSK is reported.

#### **GFSK**

#### 20dB Bandwidth

#### Limit

For frequency hopping systems operating in the 2400MHz-2483.5MHz no limit for 20dB bandwidth.

#### **Test Procedure**

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 30 KHz RBW and 100 KHz VBW.

The 20dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 20dB.

#### **Test Configuration**

#### **Out-of-band Emissions** 4.8

#### Limit

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF con-ducted or a radiated measurement, pro-vided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter com-plies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required.

#### **Test Procedure**

Connect the transmitter output to spectrum analyzer using a low loss RF cable, and set the spectrum analyzer to RBW=100 kHz, VBW= 300 kHz, peak detector, and max hold. Measurements utilizing these setting are CTATES made of the in-band reference level, bandedge and out-of-band emissions.

#### **Test Configuration**

#### **Test Results**

Remark: The measurement frequency range is from 30MHz to the 10th harmonic of the fundamental frequency. The lowest, middle and highest channels are tested to verify the spurious emissions and bandage measurement data.

We measured all conditions (DH1, DH3, DH5) and recorded worst case at DH5

Test plot as follows:
