Equipment Under Test (EUT)

Bluetooth Smart Ready Module

Model: BT121

Type: -

Serial no: -

FCC ID: QOQBT121

IC: 5123A-BGTBT121

Description of the EUT

The EUT is a Bluetooth Smart Ready module which supports Bluetooth Classic and Bluetooth Smart connectivity. This test report includes only Bluetooth Smart part of the test results.

Classification of the device

Fixed device	☐
Mobile Device (Human body distance > 20cm)	☒
Portable Device (Human body distance < 20cm)	☐

Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing

Ratings and declarations

Operating Frequency Range (OFR): 2402 – 2480 MHz
Channels: 40
Channel separation: 2 MHz
Channel bandwidth: 1.056439942 MHz
Effective conducted power: 11.88 dBm
Transmission technique: DSSS
Modulation: GFSK
Integral Antenna gain: 1 dBi

Power Supply

Operating voltage range: 2.2 – 3.6 VDC

Mechanical Size of the EUT

Height: 2.0 mm	Width: 11.0 mm	Length: 13.9 mm
----------------	----------------	-----------------

Samples

Two samples were used in the testing. Normal commercial sample with integral antenna for radiated emissions and a sample with integral antenna removed and replaced with coaxial cable and SMA-connector for conducted RF tests. During the tests the EUT was set into continuous transmit and was stopped to the channel under test. Normal test modulation and maximum transmit power was used in all tests. No modifications were done during the tests.

Disclaimer

Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only. This document cannot be reproduced except in full, without prior approval of the Company.

SUMMARY OF TESTING

Test Specification	Description of Test	Result
§15.247(b)(3) / RSS-210 A8.4	Maximum Peak Conducted Output Power	PASS
§15.247(a)(2) / RSS-210 A8.2	6 dB Bandwidth	PASS
§15.247(e) / RSS-210 A8.2	Power Spectral Density	PASS
RSS-GEN 4.6.1	99% Occupied Bandwidth	PASS
§15.247(d) / RSS-210 A8.5	100 kHz Bandwidth of Frequency Band Edges and Conducted Spurious Emissions	PASS
§15.209(a), §15.247(d) / RSS-210 A8.5	Radiated Emissions Within The Restricted Bands	PASS
§15.109 / RSS-GEN 7.2.3.2	Unintentional Radiated Emissions	PASS

EUT Test Conditions During Testing

The EUT was in continuous transmit mode during all the tests. The hopping was stopped and the EUT was configured into the wanted channel. Normal modulation and duty cycle was applied in all the tests.

Following channels were used during the tests when the hopping was stopped:

Channel Low (Ch 0) = 2402 MHz

Channel Mid (Ch 20) = 2442 MHz

Channel High (Ch 39) = 2480 MHz

Conducted Emissions In The Frequency Range 150 kHz – 30 MHz

TEST RESULTS

Conducted Emissions In The Frequency Range 150 kHz - 30 MHz.

Standard: ANSI C63.10 (2009)
Tested by: NKO
Date: 28.5.2015
Temperature: 20 °C
Humidity: 40 % RH
Barometric pressure: 1008.7 hPa
Measurement uncertainty: ± 2.9 dB

Level of confidence 95 % (k = 2)

FCC Rule: 15.207 (a)

Conducted disturbance voltage was measured with an artificial main network from 150 kHz to 30 MHz with 4.5 kHz steps and a resolution bandwidth of 9 kHz. Measurements were carried out with peak and average detectors.

During the test the EUT was powered from the separate power supply through the LISN.

Frequency of emission (MHz)	Conducted limit (dB μ V)	
	Quasi-peak	Average
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
5-30	60	50

*Decreases with the logarithm of the frequency.

Conducted Emissions In The Frequency Range 150 kHz – 30 MHz

Conducted Emission Mains FCC Part 15 Class B with ESH3-Z5 8019

Figure 1. The measured curves with peak- and average detector

Final measurements from the worst frequencies

Due to the low emission level no final measurements were made.

Maximum Peak Conducted Output Power**Maximum Peak Conducted Output Power**

Standard: ANSI C63.10 (2009)
Tested by: NKO
Date: 12.5.2015
Humidity: 25 %
Temperature: 21 °C
Measurement uncertainty $\pm 2.87\text{dB}$ Level of confidence 95 % (k = 2)

FCC Rule: 15.247(b)(3)

For systems using digital modulation in the 2400-2483.5 MHz bands the limit is 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power.

Results:

Channel	Conducted Power [dBm]	Limit [dBm]	Margin [dBm]	Result
Low	11.86	30	18.14	PASS
Mid	11.81	30	18.19	PASS
High	11.88	30	18.12	PASS

Maximum Peak Conducted Output Power

Figure 2. Channel Low.

Figure 3. Channel Mid.

Maximum Peak Conducted Output Power

Date: 12.MAY.2015 10:00:33

Figure 4. Channel High.

Transmitter Radiated Spurious Emissions 30 – 1000 MHz

Standard:	ANSI C63.10	(2009)
Tested by:	NKO	
Date:	13.5. – 14.5.2015	
Humidity:	20 – 41 %	
Temperature:	21 – 25 °C	
Measurement uncertainty	± 4.51 dB	Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a)

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a).

The correction factor in the final result table contains the sum of the transducers (antenna + amplifier + cables). The QuasiPeak value is the measured value corrected with the correction factor.

Transmitter Band Edge Measurement and Conducted Spurious Emissions

Transmitter Band Edge Measurement and Conducted Spurious Emissions

Standard: ANSI C63.10 (2009)
Tested by: NKO
Date: 12.5.2015
Humidity: 25 %
Temperature: 21 °C
Measurement uncertainty ± 2.87 dB Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a)

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).

Table 26. Band edge attenuation.

Band Edge Attenuation	
Lower Band Edge	Upper Band Edge
-61.41 dBc	-58.21 dBc
Limit: -20dBc	

Table 27. Conducted spurious emissions.

Conducted Spurious Emissions					
Channel	Frequency	Measured Attenuation [dBm]	EIRP Limit [dBm]	Margin [dB]	Result
Low	9.60983 GHz	-31.04	-21.36	9.68	Pass
Mid	9.76704 GHz	-31.58	-21.36	10.22	Pass
High	9.92070 GHz	-32.43	-21.36	11.07	Pass

Conducted spurious emissions limit is calculated from electric field strength result. Following formula was used in calculating electric field strength limit to EIRP:

$$E = \text{EIRP} - 20 \log D + 104.8$$

where,

D = specified measurement distance

E = Electric field strength

EIRP = equivalent isotropic radiated
