22 October 1999

Dear Sir

Please find enclosed an application for certification for the following equipment:

DataLogic DLL6000-R series.

The unit is a low power intentional radiator and has been tested according to the rules of CFR47 part 15 subpart C.

The unit forms part of a system with another device - the DataLogic OM6010-R . This is also a low power intentional radiator and a separate application for certification has been submitted for this device under FCC ID: OMJ0001.

As a result of a telephone conversation with an FCC engineer I understand that, although the unit contains digital electronics, it would be considered as an intentional radiator only and not subject to the rules of Part 15 subpart B - digital devices.

dB Technology is acting as an agent for the applicant in respect of this submission and would therefore appreciate it if any questions are initially forwarded to ourselves.

Yours Sincerely

Dave Smith

EMC Engineer
