

The Hatch Baby Smart Changing Pad must be used on a level, stable and structurally sound surface. And, hopefully this goes without saying, but please do not leave your baby unattended on the Smart Changing Pad. Do not overload scale beyond capacity (44lbs/20kg) as this will damage it.

Please note that some feeding amount and weight fluctuation during the day or from day to day is normal. Please also note that if your baby is moving, the normal accuracy (5g/0.2oz) may be compromised. If you have questions or concerns regarding your feeding amount, your baby’s weight or fluctuations in weight, please consult your healthcare provider. And, hang in there — the joy to stress ratio gets better!

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.
