## FCC ID: 2BFCM-X1PRO

## **RF** exposure evaluation

§ 2.1093 Radiofrequency radiation exposure evaluation: Portable Devices.

According to § 15.247(i) and § 1.1307b(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the commission's guidance.

The 1-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq$  50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)]  $\cdot [\sqrt{f(GHz)}] \le 3.0$  for 1-g SAR, where

- f(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- When the minimum test separation distance is < 5 mm, a distance of 5 mm according is applied to determine SAR test exclusion.
- The result is rounded to one decimal place for comparison
- · GFSK

Modulation	Frequency (MHz)	Max. Power (dBm)	Max. Tune up Power (dBm)	Max. Tune up Power (mW)	Test distance (mm)	Result	exclusion thresholds for 1-g SAR
8DPSK	2441	2.21	2.5	1.78	5	0.56	3.0
GFSK (2Mbps)	2440	1.46	1.5	1.41	5	0.44	3.0

## Conclusion:

For the max result:  $0.56W/Kg \le FCC$  Limit 3.0 for 1g SAR.

The Product unsupported at the same time to Transmitting.
