

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On the left, a wooden workbench holds a spectrum analyzer. To its right, on the floor, is a power supply unit with a red terminal. On the right, another wooden workbench holds a smartphone connected to a small electronic device. The background is a plain grey wall with a power outlet.
Radiation Emission Test Setup (Below 30MHz)	 A photograph of a radiation emission test chamber. The interior walls are lined with white and blue electromagnetic interference (EMI) shielding tiles. In the center, a white test fixture sits on a metal stand. A green and white striped safety line is marked on the floor. A metal frame is visible in the foreground.

Radiation Emission Test Setup (30MHz to1GHz)	 A photograph of a radiation emission test setup for the 30MHz to 1GHz range. A white, box-like test item is placed on a black turntable in the center of an anechoic chamber. The chamber walls are covered with white, square-shaped pyramidal absorbers. To the right, a metal frame structure with vertical rods is visible. The floor is a smooth, reflective surface with green and white striped safety tape marking the area around the turntable.
Radiation Emission Test Setup (1GHz to18GHz)	 A photograph of a radiation emission test setup for the 1GHz to 18GHz range. The same white test item is on the turntable. A red, horn-shaped antenna is mounted on a stand to the right, pointing towards the test item. The chamber walls are covered with white, square-shaped pyramidal absorbers. The floor is a smooth, reflective surface with yellow safety tape marking the area around the turntable. A row of black, conical absorbers is visible along the bottom edge of the frame.

**Radiation Emission
Test Setup (Above18GHz)**

*** Means' only test and setup for PART 15C .**
