

Test Report

Report No.: DL-20240124053E

FCC ID: 2A4MT-N2002

Applicant: Shenzhen Zhenghaixin Technology Co., Ltd.

Address: Area 301A, No.7 Xiongyu Road, Tangxiachong Community, Yanluo Street, Baoan District,

Shenzhen

Manufacturer: Shenzhen Zhenghaixin Technology Co., Ltd.

Address: Area 301A, No.7 Xiongyu Road, Tangxiachong Community, Yanluo Street, Baoan District,

Shenzhen

EUT: Power Bank

Trade Mark: N/A

Model Number: N2002

Date of Receipt: Jan. 24, 2024

Test Date: Jan. 24, 2024 - Feb. 03, 2024

Date of Report: Feb. 03, 2024

Prepared By: Shenzhen DL Testing Technology Co., Ltd.

Address: 101-201, Building C, Shuanghuan, No.8, Baoqing Road, Baolong Industrial Zone, Baolong

Street, Longgang District, Shenzhen, Guangdong, China

Prepared (Engineer): Alisa Song

Reviewer (Supervisor): Jack Bu

Approved (Manager): Jade Yang

This test report is based on a single evaluation of one sample of above mentioned products. It is not permitted to be duplicated in extracts without written approval of Shenzhen DL Testing Technology Co., Ltd.

Instructions

- 1. This test report shall not be partially reproduced without the written consent of the laboratory.
- 2. The test results in this test report are only responsible for the samples submitted
- 3. This test report is invalid without the seal and signature of the laboratory.
- 4. This test report is invalid if transferred, altered, or tampered with in any form without authorization.
- 5. Any objection to this test report shall be submitted to the laboratory within 15 days from the date of receipt of the report.

Test Result Certification Applicant: Shenzhen Zhenghaixin Technology Co., Ltd. Area 301A, No.7 Xiongyu Road, Tangxiachong Community, Yanluo Street, Address: Baoan District, Shenzhen Shenzhen Zhenghaixin Technology Co., Ltd. Manufacturer: Area 301A, No.7 Xiongyu Road, Tangxiachong Community, Yanluo Street, Address: Baoan District, Shenzhen **Product description** Power Bank Product name: Trademark: N/A N2002 Model name: Series Model: N/A FCC CFR 47 PART 1, § 1.1310 Standards: FCC CFR 47 PART 2, § 2.1093 KDB 680106 D01 Wireless Power Transfer v04 Test method: **Date of Test** Jan. 24, 2024 - Feb. 03, 2024 Date of test: Pass Test result:

1 General Description

1.1 Description of the EUT

| Product name: | Power Bank |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Model name: | N2002 |
| Series Model: | N/A |
| Model difference: | N/A |
| Electrical rating: | USB-C Input: 5V/3A, 9V/2A, 12V/1.5A USB-C Output: 5V/3A, 9V/2.22A, 12V/1.67A USB-C(Cable) Output: 5V/3A, 9V/2.22A, 12V/1.67A Lightning(Cable) Output: 5V/2.4A USB-A Output: 5V/3A, 9V/2A, 12V/1.5A Wireless Output: 3W Max. Total Output: 5V/3A Battery capacity: 20000mAH/3.85V/77Wh |
| Accessories: | Cable: USB-C to USB-C Cable 100cm |
| RF specification: | |
| Operation frequency: | 115-205kHz |
| Modulation type: | MSK |
| Antenna type: | Coil |

1.2 Description of test modes

All the test modes were carried out with the EUT in normal operation, the final test mode of the EUT was the worst test mode for emission test, which was shown in this report and defined as:

| No. | Emission test modes |
|-------|------------------------------|
| Mode1 | Wireless Output(3W) |
| Mode2 | Charging+Wireless Output(3W) |
| Mode3 | Standby |

Note: All of the listed test mode were tested, only the data of the worst mode (Mode1) is recorded in the report

1.3 Description of support units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Support equipment list | | | | | | | | |
|-------------------------------------|----------|------------|--------------|--|--|--|--|--|
| Description | Model | Serial No. | Manufacturer | | | | | |
| XIAOMI Laptop Portable adapter(65W) | AD65G | / | XIAOMI | | | | | |
| Apple | Series 6 | / | Apple | | | | | |

2 Measurement uncertainty

| Parameter | Expanded Uncertainty | | |
|------------------------------------------|----------------------|--|--|
| Magnetic field measurement (9kHz~30MHz) | $\pm 7.8\%$ | | |
| Electric field measurements (9kHz~30MHz) | ±7.8% | | |

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

3 Test facilities and accreditations

3.1 Test laboratory

| Test laboratory: | Shenzhen DL Testing Technology Co., Ltd. | | | |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Test site location: | 101-201, Building C, Shuanghuan, No.8, Baoqing Road, Baolong Industrial Zone, Baolong Street, Longgang District, Shenzhen, Guangdong, China | | | |
| FCC Test Firm Registration Number: | 854456 | | | |
| Designation Number: | CN1307 | | | |
| IC Registered No.: | 27485 | | | |
| CAB ID.: | CN0118 | | | |

Page 8 of 20

Report No.: DL-20240124053E

4 List of test equipment

| Equipment | Manufacturer | Model | Serial No. | Cal. date | Cal. Due |
|----------------------------------------------|--------------|----------|------------|----------------|----------------|
| Electric and Magnetic Field Probe – Analyzer | Narda | EHP-200A | 101166 | June. 24, 2023 | June. 25, 2024 |

5 Test result

5.1 Requirement

§1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in §1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of FCC part 2.1093 of this chapter.

Report No.: DL-20240124053E

Table 1 to §1.1310(e)(1) - Limits for Maximum Permissible Exposure (MPE)

| Frequency range (MHz) | Electric field strength (V/m) | Magnetic field strength (A/m) | Averaging time (minutes) | | | | | | |
|-------------------------------------------------|-------------------------------|-------------------------------|--------------------------|-----|--|--|--|--|--|
| (i) Limits for Occupational/Controlled Exposure | | | | | | | | | |
| 0.3-3.0 | 614 | 1.63 | *(100) | ≤6 | | | | | |
| 3.0-30 | 1842/f | 4.89/f | *(900/f²) | <6 | | | | | |
| 30-300 | 61.4 | 0.163 | 1.0 | <6 | | | | | |
| 300-1500 | | | f/300 | <6 | | | | | |
| 1500-100000 | | | 5 | <6 | | | | | |
| | (ii) Limits for Genera | al Population/Uncontrolled E | xposure | | | | | | |
| 0.3-1.34 | 614 | 1.63 | *(100) | <30 | | | | | |
| 1.34-30 | 824/f | 2.19/f | *(180/f²) | <30 | | | | | |
| 30-300 | 27.5 | 0.073 | 0.2 | <30 | | | | | |
| 300-1500 | | | f/1500 | <30 | | | | | |
| 1500-100000 | | | 1.0 | <30 | | | | | |

f = frequency in MHz

Note 1: Occupational/controlled exposure limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure.

Note 2: General population/uncontrolled exposure limits apply in situations in which the general public may be exposed, or in which persons who are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.

^{* =} Plane-wave equivalent power density

5.2 Test setup

For portable exposure conditions:

Notes: The EHP 200A Probe has a diameter of 10.9cm and a radius of 5.45cm.

Page 11 of 20

Report No.: DL-20240124053E

5.3 Test Procedures

For portable exposure conditions:

- a. The RF exposure test was performed in anechoic chamber.
- b. Perform H-field measurements for each edge/top surface of the host/client pair at every 2 cm, starting from as close as possible out to 20 cm
- c. The highest emission level was recorded and compared with limit.

Notes: The EUT was setted to transmit continuously with the duty cycle of 100%.

Page 12 of 20

Report No.: DL-20240124053E

5.4 Test results

For portable exposure condition: Note:

- (1). The portable test modes have covered the considerations of the mobile test, only record the test data of the portable conditions in this report.
- (2) Operating modes with client device (1 %, 50%, 99% battery status of client device) have been test, only show the data of worst case of 1% battery status of client device.
- (3) 20-2cm is the actual test value, and 0 cm is the estimated value.
- (4) Perform H-field/E-field measurements are taken along all three axes the device from 0cm~20cm in 2cm minimum increment for each edge surface of the host/client pair. If the center of the probe sensing element is more than 5mm from the probe outer edge, the field strengths need to be estimated for the positions that are not reachable.

Example of probe measurements in points close to the device surface: estimates compared with measurements at 4 and 6 cm provide validation

According to Calibration information and specification about EHP-200A, The Probe EHP-200A's sensitive elements center are 8mm below the external surface, and the dimensions is 92x92x109mm. so the actual 0cm field strengths need to be estimated for the positions that are not reachable. The Extrapolated Value Calculation Method please below). And the result of test distance 2cm~20cm was measured value.

| Probe | Length | Width | Height |
|-------|--------|-------|--------|
| Probe | 109mm | 92mm | 92mm |

Note: EUT is a loop/coil emitting structure, so E-field not required. Just recorded the H-field value.

The sensitive elements are located approximately 8 mm below the external surface

(5) Estimated method for portable RF Exposure condition:

We use Biot-Savart formula theory to estimate the strength of the magnetic field that the measuring instrument cannot measure. According to Biot-Savart formula:

Top & Bottom Side:

$$B = \frac{\mu_0 * I * N * R^2}{2 * (R^2 + x^2)^{3/2}}$$

Front, left, right & rear Side:

B: means H-field value;

 μ_0 is space permeability; $\mu_0=4\pi^*10-7$;

- I: A current element passing through a coil;
- **R**: means the Radius of coil(According to provided Antenna specification: We can get the minimum R=38/2=19mm=0.019m):

Test Distance: The distance from the sensing element of the probe to the edge of the device surface.

x: means the center of the coil to the sensing elements of the probe. (For top & bottom side: x=test distance; For other side: x=test distance+R)

- **N**: Number of turns, according to providing "Antenna specification" files: N=10.
- (6) For validation purposes: If the value to show a **30% agreement** between the mode and the (E- and/or H-field) probe measurements for the two closest points to the device surface, and with 2cm increments. Then this extrapolation method is reasonable.

Note: The percent ratio of agreement is the difference between the estimated and measured values divided by the average of the estimated and measured values.

Validation:

| Magnetic Field Emissions | | | | | | | |
|--------------------------|--------|--------|-----------|---------------|-----------|--------|-------------------------|
