The firmware version used during testing was FW v.01.01.NA.01.08

6.5. WORST-CASE CONFIGURATION AND MODE

Radiated emissions below 1GHz, above 18GHz, and power line conducted emission were performed with the EUT set to transmit at the channel with highest average output power as worst-case scenario. This was found to be 11a 18Mbps, 5260 MHz.

Radiated emissions between 1GHz and 18GHz were performed with the EUT set to transmit at the highest power on low, mid, and high channels for the worst case modulation scheme, 11a, as determine by worst-case PSD for the 5.2, 5.3 and 5.6 GHz Band. For the 5.8 GHz Band, VHT80 was additionally ran as it was found to have the highest average output power of the band. Band edge was performed with the EUT set to transmit at the highest power on low and high channels for the largest bandwidth modulation schemes of VHT80, HT40, and HT20.

The fundamental of the EUT was investigated in three orthogonal orientations X,Y,Z, it was determined that X orientation was worst-case orientation; therefore, all final radiated testing was performed with the EUT in X orientation.

The EUT was tested in four configurations: dock charging, ac adapter charging, connected to POV camera, and battery powered, to find the worst-case emissions configuration Through pretesting, it was determined that charging with the AC adapter was the worst-case radiated and AC line emissions configuration. Therefore, all radiated emissions testing was performed with the EUT charging when connected to the AC adapter.

Worst-case data rates as determined by pre-testing were found to be:

802.11a mode: 18 Mbps
802.11n HT20mode: MCS2
802.11n HT40mode: MCS0
802.11ac VHT80 mode: MCS1
