1.Introduction

GV55W is a powerful GPS locator designed for vehicle or asset tracking. It has superior receiver sensitivity, fast TTFF (Time to First Fix) and supports Dual-Band GSM frequencies 850/1900, its location can be monitored in real time or periodically tracked by a backend server or other specified terminals. GV55W has multiple input/output interfaces that can be used for monitoring or controlling external devices. Based on the integrated @Track protocol, the GV55W can communicate with a backend server through the GPRS network to transfer reports of emergency, geo-fence boundary crossings, low backup battery or scheduled GPS position as well as many other useful functions. Users can also use GV55W to monitor the status of a vehicle and control the vehicle by its external relay output. System Integrators can easily set up their tracking systems based on the full-featured @Track protocol.

1.1. Reference

Table 1. GV55W Protocol Reference

SN	Document name	Remark
[1]	GV55W @Track Air Interface Protocol	The air protocol interface between GV55W and backend server.

1.2. Terms and Abbreviations

Table 2. Terms and Abbreviations

Abbreviation	Description
AGND	Analog Ground
AIN	Analog Input
DIN	Digital Input
DOUT	Digital Output
GND	Ground
MIC	Microphone
RXD	Receive Data
TXD	Transmit Data
SPKN	Speaker Negative
SPKP	Speaker Positive

2. Product Overview

2.1. Check Parts List

Before starting, check all the following items have been included with your GV55W. If anything is missing, please contact your supplier.

Figure 1. Appearance of GV55W

2.2. Parts List

Table 3. Parts List

Name	Picture
GV55W Locator	63mm*50mm*21.8mm 
User Cable	

DATA_CABLE_W (Optional)

2.3. Interface Definition

GV55W has a 6PIN interface connector. It contains the connections for power, and I/O. The sequence and definition of the 6PIN connector are shown in the following figure:

Figure 2. 6PIN Connector on GV55W

Table 4. Description of 6 PIN Connections

Index	Description	Remark
1	VIN	External DC power input, 12/24V
2	GND	GND
3	IGN	Ignition input, positive trigger
4	IN1	Digital input, negative trigger
5	OUT2	Open drain, 150mA max
6	OUT1	Open drain, 150mA max, with latch circuit

2.4. GV55W User Cable Color

Table 5. GV55W User Cable Color Definition

Definition	Color	PIN No.	Cable
VIN	Red	1	
GND	Black	2	
IGN	White	3	
IN1	Orange	4	
OUT2	Green	5	
OUT1	Blue	6	

3. Getting Started

3.1. Open the Case

Figure 3. Opening the Case

Insert the triangular-pry-opener into the gap of the case as shown above, and push the opener up until the case unsnaps.

3.2. Close the Case

Figure 4. Closing the Case

Place the cover on the bottom. Gently slide the cover until it snaps.

3.3. Install a SIM Card

Open the case and ensure the unit is not powered (unplug the 6Pin cable and switch the internal battery to OFF position). Slide the holder right to open the SIM card. Insert the SIM card into the holder as shown below with the gold-colored contact area facing down. Take care to align the cut mark. Close the SIM card holder. Close the case.

Figure 5. SIM Card Installation

3.4. Install the Internal Backup Battery

Figure 6. Backup Battery Installation

There is an internal backup Li-ion battery.

3.5. Switch ON the Backup Battery

To use the GV55W backup battery, the switch must be in the ON position. Switch and ON/OFF position are shown below.

Figure 7. Switch and ON/OFF position

Note:

1. The switch must be in the “OFF” position when shipped on an aircraft.
2. When the switch is in the “OFF” position, the battery cannot be charged or discharged.
3. To reset the device: Remove the external DC power and switch off the backup battery. Then supply the external power and switch on the backup battery.

3.6. Power Connection

PWR (PIN1) / GND (PIN2) are the power input pins. The input voltage range for this device is from 8-32V.

The device is designed to be installed in vehicles that operate on 12/24V vehicle without the need for external transformers.

n

Figure 8. Typical Power Connection

3.7. Ignition Detection

Table 6. Electrical Characteristics of Ignition Detection

Logical State	Electrical State
Active	5.0V to 32V
Inactive	0V to 3V or Open

Figure 9. Typical Ignition Detection

IGN (Pin3) is used for ignition detection. It is strongly recommended to connect this pin to ignition key "RUN" position as shown above.

An alternative to connecting to the ignition switch is to find a non permanent power source that is only available when the vehicle is running. For example, the power source for the FM radio.

IGN signal can be configured for the device to start transmitting information to backend server when the ignition is on and enter power saving mode when the ignition is off.

3.8. Digital Input

There is one general purpose digital input on GV55W, i.e. IN1 (PIN3). It is negative trigger.

Table 7. Electrical Characteristics of Digital Input

Logical State	Electrical Characteristics
Active	0V to 0.8V
Inactive	Open

The following diagram shows the recommended connection of a digital input.

Figure 10. Typical Digital Input Connection

3.9. Digital Outputs

There are two digital outputs on GV55W. Both are of open drain type and the maximum drain current is 150mA. Each output has built-in overcurrent protection self-recovery PTC fuse.

Figure 11. Digital Output Internal Drive Circuit

Table 8. Electrical Characteristics of Digital Outputs

Logical State	Electrical Characteristics
Enable	<1.5V @150mA
Disable	Open drain

Figure 12. Typical Connection with Relay

Figure 13. Typical Connection with LED

Note:

1. OUT1 will latch the output state during reset.
2. Many modern relays come with a flyback diode pre-installed internal to the relay itself. If the relay has this diode, ensure the proper relay polarity connected is used. If this diode is not internal, it should be added externally. A common diode such as 1N4004 will work in most circumstances.

3.10. Device Status LED

GV55W has three status LEDs that are GSM LED, GPS LED, and PWR LED.

Figure 14. GV55W LED on the Case

Table 9. Definition of Device Status and LED

LED	Device Status	LED Status
GSM (Note 1)	Device is searching GSM network.	Fast flashing (Note 3)
	Device has registered to GSM network.	Slow flashing (Note 4)
	SIM card needs pin code to unlock.	ON
GPS (Note 2)	GPS chip is powered off.	OFF
	GPS sends no data or data format error occurs.	Slow flashing
	GPS chip is searching GPS information.	Fast flashing
	GPS chip has got GPS information.	ON
PWR (Note 2)	No external power and internal battery voltage is lower than 3.35V.	OFF
	No external power and internal battery voltage is in the range of 3.35V~3.5V.	Slow flashing
	External power in and internal battery is charging.	Fast flashing
	External power in and internal battery is fully charged.	ON

Note:

1. GSM LED cannot be configured.
2. GPS LED and PWR LED can be configured to turn off after a period of time using the configuration tool.
3. Fast flashing is about 60ms ON/780ms OFF.
4. Slow flashing is about 60ms ON/1940ms OFF.

3.11. Motion Sensor Direction

GV55W has an internal 3-axis accelerometer supporting driving behavior monitoring, power conservation and motion detection. The following shows the directions of the motion sensor.

Figure 15. Motion Sensor Direction

FCC Statement

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.
