Theory of Op. Updated 2006-10-16 with DFS Statements.pdf
Hi Mike,

Pls see answer below.

Question #1: Please provide updated theory of operation to include additional 5.4 GHz band operation.

<answer>updated theory of operation is attached.

Question #2: Please provide a statement to describe how the additional 5.4 GHz band is enabled and indicate if there are any hardware changes to be made.

<answer>pls see updated theory of operation to address this question.

Question #3: Please submit an antenna list that will be used under this FCC ID number.

<answer>antenna list is attached.

Question #4: Only Channel move time and channel closing time with Radar Type 1 are provided. Please justify compliance with other radar types.

<answer> the EUT is a Slave without Radar Detection. According to Tables 1 and 2, plus Section 7.8.3, in FCC 06-96 Appendix, such a device only needs to be evaluated with respect to Move Time and Closing Time Requirements using any one of the Short Pulse Radar Types.

Question #5: Based upon the questions asked by FCC in reviewing Access point application, please confirm the data contained in this report is the final test data with software version used in the Access point DFS tests.

<answer>The revised report includes test data with the Master Device incorporating software version 5.1.0.42. This is the final software version used in the Access point DFS tests.

Thanks,

Claire
