RF Exposure Exemption Report for FCC

Applicant Name : Hykso

Applicant Address : 936 W. 17th Street Costa Mesa, CA 92627 United States

Product Name : FightCamp Tracker

Brand Name : FightCamp

Model Number : FC200

FCC ID : 2AK2R-TRKR

Report Number : USSC241063001

Compliant Standards : FCC 47 CFR §2.1093

Sample Received Date : Jan. 05, 2024

Report Issued Date : Jul. 16, 2024

The above equipment has been tested by **Eurofins E&E Wireless Taiwan Co., Ltd.**, and found compliance with the requirement of the above standards. The test record, data evaluation & Device Under Test (DUT) configurations represented herein are true and accurate accounts of the measurements of the sample's characteristics under the conditions specified in this report.

Note:

- 1. The test results are valid only for samples provided by customers and under the test conditions described in this report.
- 2. This report shall not be reproduced except in full, without the written approval of Eurofins E&E Wireless Taiwan Co., Ltd.
- 3. The relevant information is provided by customers in this test report. According to the correctness, appropriateness or completeness of the information provided by the customer, if there is any doubt or error in the information which affects the validity of the test results, the laboratory does not take the responsibility.

Approved By:

Roy Wu / SAR Technical Director

1. Test Regulations

1.1. Reference Standard and Guidance

The Low Power Exemption Exposure evaluation documented in this report were performed in accordance with following FCC published KDB guidance and standard:

47 CFR Part 1.1307

47 CFR Part 1.1310

47 CFR Part 2.1093

KDB Publication 447498 D01 - General RF Exposure Guidance v06

KDB Publication 447498 D04 – Interim General RF Exposure Guidance v01

1.2. RF Exposure Limits

According to 47 CFR §1.1310, for operations within the frequency range of 300 kHz and 6 GHz (inclusive), the limits for maximum permissible exposure (MPE), derived from whole-body SAR limits and listed in below table, may be used instead of whole-body SAR limits to evaluate the environmental impact of human exposure to RF radiation as specified in §1.1307(b), except for portable devices as defined in §2.1093 of this chapter as these evaluations shall be performed according to the SAR provisions in §2.1093.

- 1. Occupational / Controlled Exposure Limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. The phrase fully aware in the context of applying these exposure limits means that an exposed person has received written and/or verbal information fully explaining the potential for RF exposure resulting from his or her employment. With the exception of transient persons, this phrase also means that an exposed person has received appropriate training regarding work practices relating to controlling or mitigating his or her exposure. In situations when an untrained person is transient through a location where occupational / controlled limits apply, he or she must be made aware of the potential for exposure and be supervised by trained personnel pursuant to §1.1307(b)(2) of this part where use of time averaging is required to ensure compliance with the general population exposure limit. The phrase exercise control means that an exposed person is allowed and also knows how to reduce or avoid exposure by administrative or engineering work practices, such as use of personal protective equipment or time averaging of exposure.
- 2. <u>General Population / Uncontrolled Exposure Limits</u> apply in situations in which the general public may be exposed, or in which persons who are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure. For example, RF sources intended for consumer use shall be subject to the limits for general population / uncontrolled exposure in this section.

| | Tx Frequency (MHz) | Operating Mode | | | |
| Supported Wireless Technologies | Bluetooth 2402 ~ 2480 | BR, EDR, LE | | | |

Note:

The above DUT information is declared by manufacturer and for more detailed features description please refers to the manufacturer's specifications or User's Manual.

Issued Date: Jul. 16, 2024

4. Low Power Exemption Assessment

4.1. Introduction

According to $47 \ CFR \ \S 2.1093$, a portable device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that the RF source's radiating structure(s) is/are within 20 centimeters of the body of the user. the exposure limits in $\S 1.1310$ of this chapter, and preparation of an EA if the limits are exceeded, is necessary for portable devices having single RF sources with more than an available maximum time-averaged power of 1 mW, more than the ERP listed in Table 1 to $\S 1.1307(b)(3)(i)(C)$, or more than the Pth in the following formula, whichever is greater. The following formula shall only be used in conjunction with portable devices not exempt by $\S 1.1307(b)(3)(i)(C)$ at distances from 0.5 centimeters to 20 centimeters and frequencies from 0.3 GHz to 6 GHz.

4.2. Determination of Exemption for Low Power Devices

For Single RF Sources, a single RF source is exempt if:

Option A:

The available maximum time-averaged power is no more than 1 mW, regardless of separation distance. This exemption may not be used in conjunction with other exemption criteria other than those in paragraph $\S1.1307(b)(3)(ii)(A)$. Medical implant devices may only use this exemption and that in paragraph $\S1.1307(b)(3)(ii)(A)$.

Option B:

The available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold *Pth* (mW) described in the following formula. This method shall only be used at separation distances (cm) from 0.5 centimeters to 40 centimeters and at frequencies from 0.3 GHz to 6 GHz (inclusive). *Pth* is given by:

$$P_{th}(mW) = \begin{cases} ERP_{20 cm} (d/20 cm)^{x} & d \le 20 cm \\ ERP_{20 cm} & 20 cm < d \le 40 cm \end{cases}$$

Where

$$x = -\log_{10}\left(\frac{60}{ERP_{20\ cm}\sqrt{f}}\right)$$
 and f is in GHz

and

$$ERP_{20\ cm}(mW) = \begin{cases} 2040f & 0.3\ GHz \le f < 1.5\ GHz \\ 3060 & 1.5\ GHz \le f \le 6\ GHz \end{cases}$$

d = the separation distance (cm).

Option C:

Using *Table 1* and the minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. For the exemption in Table 1 to apply, R must be at least $\lambda/2\pi$, where λ is the free-space operating wavelength in meters. If the ERP of a single RF source is not easily obtained, then the available maximum time-averaged power may be used in lieu of ERP if the physical dimensions of the radiating structure(s) do not exceed the electrical length of $\lambda/4$ or if the antenna gain is less than that of a half-wave dipole (1.64 linear value).

| Table 1: Single RF Sources Subject to I | Routine Environmental Evaluation |
|---|----------------------------------|
|---|----------------------------------|

| RF Source Frequency (MHz) | Threshold ERP (Watts) |
|------------------------------|---------------------------------|
| 0.3 – 1.34 | 1.920 x <i>R</i> 2 |
| 1.34 – 30 | 3.450 x <i>R</i> 2 / <i>f</i> 2 |
| 30 – 300 | 3.83 x R2 |
| 300 – 1500 | 0.0128 x <i>R</i> 2 x <i>f</i> |
| 1500 – 100000 | 19.2 x <i>R</i> 2 |

For Multiple RF Sources, multiple RF sources are exempt if:

Option A:

eurofins

The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required). This exemption may not be used in conjunction with other exemption criteria other than those is $\S 1.1307(b)(3)(i)(A)$. Medical implant devices may only use this exemption and that in $\S 1.1307(b)(3)(i)(A)$.

Option B:

In the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^{a} \frac{P_i}{P_{th,i}} + \sum_{i=1}^{b} \frac{ERP_j}{ERP_{th,i}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

Where:

- **a** = number of fixed, mobile, or portable RF sources claiming exemption per §1.1307(b)(3)(i)(B) for Pth, including existing exempt transmitters and those being added.
- **b** = number of fixed, mobile, or portable RF sources claiming exemption per §1.1307(b)(3)(i)(C) for Threshold ERP, including existing exempt transmitters and those being added.
- **c** = number of existing fixed, mobile, or portable RF sources with known evaluation for the specified minimum distance including existing evaluated transmitters.
- **Pi** = the available maximum time-averaged power or the ERP, whichever is greater, for fixed, mobile, or portable RF source *i* at a distance between 0.5 cm and 40 cm (inclusive).
- **Pth,** i = 1 the exemption threshold power (*Pth*) according to $\S 1.1307(b)(3)(i)(B)$ for fixed, mobile, or portable RF source i.
- **ERPj** = the ERP of fixed, mobile, or portable RF source *j*.
- **ERPth,j** = exemption threshold ERP for fixed, mobile, or portable RF source *j*, at a distance of at least $\lambda/2\pi$ according to the applicable formula of §1.1307(b)(3)(i)(C).
- **Evaluatedk** = the maximum reported SAR or MPE of fixed, mobile, or portable RF source *k* either in the device or at the transmitter site from an existing evaluation at the location of exposure.
- **Exposure Limitk** = either the general population/uncontrolled maximum permissible exposure (MPE) or specific absorption rate (SAR) limit for each fixed, mobile, or portable RF source *k*, as applicable from §1.1310.

-&F

Report No.: USSC241063001 Issued Date: Jul. 16, 2024

4.3. Low Power Exemption Result

| Tx Bands | Frequency (MHz) | Max. Tune-up Power (dBm) | Max. Tune-up Power (mW) | Peak Antenna / Directional Gain (dBi) | ERP (mW) | LPE Level in Option A (mW) | LPE Level in Option B (mW) | LPE Level in Option C (mW) | Low-Power Exemption Verdict |
|-----------|--------------------|--------------------------------|-------------------------------|--|-------------|----------------------------------|----------------------------------|----------------------------------|--------------------------------|
| Bluetooth | 2402 | 0.46 | 1 | 1.68 | 1.00 | N/A | 2.72 | N/A | Pass by Option B |

Summary:

Since the maximum ERP of this device is less than the LPE level and this device is qualified for Low Power Exemption under the field reference level exposure exemption limits of §1.1310, the emitted RF fields will be incapable of producing exposures that exceed the exposure limits. Hence, this device complies with the reference levels and a complete SAR evaluation is not required.
