

SAR TEST REPORT

Equipment Under Test :	GSM 850&PCS1900 MOBILE PHONE
Model No. :	R600
Market name:	GF210
FCC ID :	OY6-GF210
Applicant :	UTStarcom
Address of Applicant :	No.368 LiuHe Road, BinJiang Zone, HangZhou, 310053,PRC
Date of Receipt :	2006.08.20
Date of Test :	2006.08.25 – 2006.09.06
Date of Issue :	2006.12.06

Standards:

**FCC OET Bulletin 65 supplement C,
ANSI/IEEE C95.1, C95.3, IEEE 1528-2003**

In the configuration tested, the EUT complied with the standards specified above.

Remarks:

This report details the results of the testing carried out on one sample, the results contained in this test report do not relate to other samples of the same product. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of SGS-CSTC Shanghai GSM Lab or testing done by SGS-CSTC Shanghai GSM Lab must approve SGS Shanghai GSM Lab in connection with distribution or use of the product described in this report in writing.

1. General Information

1.1 Test Laboratory

GSM Lab
 SGS-CSTC Standards Technical Services Co.Ltd Shanghai Branch
 9F,the 3rd Building, No.889, Yishan Rd, Xuhui District, Shanghai, China
 Zip code: 200233
 Telephone: +86 (0) 21 6495 1616
 Fax: +86 (0) 21 5450 0149
 Internet: <http://www.cn.sgs.com>

1.2 Details of Applicant

Name: UTStarcom
 Address: No.368 LiuHe Road, BinJiang Zone, HangZhou,
 310053,PRC

1.3 Description of EUT(s)

Brand name	UTStarcom	
Model No.	R600	
Market Name	GF210	
Serial No.	IMEI: 35287400000002-8	
State of sample	Production	
Battery Type	Lithium-Ion	
Antenna Type	Inner Antenna	
Operation Mode	GSM850/PCS1900	
Modulation Mode	GMSK	
Frequency range	GSM850	Tx: 824~849 MHz
		Rx: 869~894 MHz
	PCS1900	Tx: 1850~1910 MHz
		Rx: 1930~1990 MHz
Maximum RF Conducted Power	GSM850: 33dBm, PCS1900: 30dBm	
GPRS	MultiSlot class 10 Uplink 2TS	
GPRS Operation Mode	Class B&C	
802.11b Max Conducted Power	17.21dBm	
802.11b Modulation Type	(CCK11M/5.5M)/(DQPSK2M)/(DBPSK1M)	

1.4 Test Environment

Ambient temperature: 22.0° C

Tissue Simulating Liquid: 22° C

Relative Humidity: 39%~45%

1.5 Operation Configuration

Configuration 1: GSM 850, LeftHandSide Cheek & 15 ° Tilt Position

Configuration 2: GSM 850, RightHandSide Cheek & 15 ° Tilt Position

Configuration 3: PCS 1900, LeftHandSide Cheek & 15 ° Tilt Position

Configuration 4: PCS 1900, RightHandSide Cheek & 15 ° Tilt Position

Configuration 5: WiFi802.11b, LeftHandSide Cheek & 15 ° Tilt Position

Configuration 6: WiFi802.11b, RightHandSide Cheek & 15 ° Tilt Position

Configuration 7: GPRS 850, BodyWorn (2.0 cm between EUT and phantom)

Configuration 8: GPRS 1900, BodyWorn (2.0 cm between EUT and phantom)

Configuration 9: WiFi802.11b, BodyWorn (2.0 cm between EUT and phantom)

1.6 Test Procedure

- a). Select device positions (cheek and tilt, for both left and right sides of the SAM phantom); select operation modes for each device position in each frequency band.
- b). Test the above configuration one by one. For each configuration, test highest channel, middle channel and lowest channel.
- c). Compare all the above test results; then select the configuration where the SAR value is worst.
- d). Select the Tissue Simulating Liquid for frequency band 850MHz or 1900MHz respectively and establish a call in each GSM mode, open the WiFi and keep uninterrupted transmitting. Evaluate GSM and WiFi co-transmitting SAR at the worst configuration.

- e). Select the Tissue Simulating Liquid for frequency band 2450MHz and open the WiFi and keep uninterrupted transmitting, then establish a call in each GSM mode. Evaluate GSM and WiFi co-transmitting SAR at the worst configuration.

1.7 SAM Twin Phantom

The SAM twin phantom is a fiberglass shell phantom with 2mm shell thickness (except the ear region where shell thickness increases to 6mm). It has three measurement areas:

- Left hand
- Right hand
- Flat phantom

A white cover is provided to tap the phantom during off-periods to prevent water evaporation and changes in the liquid parameters. Free space scans of devices on the cover are possible.

On the phantom top, three reference markers are provided to identify the phantom position with respect to the robot.

Phantom specification:

Construction: The shell corresponds to the specifications of Specific Anthropomorphic Mannequin (SAM) Phantom defined in IEEE 1528-2003, EN 50361:2001 and IEC 62209. It enables the dosimetric evaluation of left and right hand phone usage as well as body mounted usage at the flat phantom region. A cover prevents evaporation of the liquid.

Shell Thickness $2 \pm 0.2 \text{ mm}$

Filling Volume Approx. 25 liters

Dimensions

Height: 850mm Length: 1000mm Width: 500mm

1.8 Device Holder for Transmitters

The SAR in the phantom is approximately inversely proportional to the square of the distance between the source and the liquid surface. For a source in 5mm distance, a positioning uncertainty of $\pm 0.5\text{mm}$ would produce a SAR uncertainty of $\pm 20\%$. An accurate device positioning is therefore crucial for accurate and repeatable measurements. The positions, in which the devices must be measured, are defined by the standards.

The DASY device holder is designed to cope with different positions given in the standard. It has two scales for the device rotation (with respect to the body axis) and the device inclination (with respect to the line between the ear reference points). The rotation centers for both scales are the ear reference point (ERP). Thus the device needs no repositioning when changing the angles.

The DASY device holder has been made out of low-loss POM material having the following dielectric parameters: relative permittivity $\epsilon_r=3$ and loss tangent $\tan \delta=0.02$. The amount of dielectric material has been reduced in the closest vicinity of the device, since measurements have suggested that the influence of the clamp on the test results could thus be lowered.

1.9 Description of Test Position

1.9.1 SAM Phantom Shape

Figure 1—front, back, and side views of SAM (model for the phantom shell). Full-head model is for illustration purposes only—procedures in this recommended practice are intended primarily for the phantom setup of Figure 2. Note: The center strip including the nose region has a different thickness tolerance.

Figure 2—Sagittally bisected phantom with extended perimeter (shown placed on its side as used for SAR measurements)

Figure 3—Close-up side view of phantom showing the ear region, N-F and B-M lines, and seven cross-sectional plane locations

Figure 4—Side view of the phantom showing relevant markings and seven cross-sectional plane locations

1.9.2 The following pictures present the different DUT constructions.

Figure 5a—Handset vertical and horizontal reference lines—"fixed case"

Figure 5b—Handset vertical and horizontal reference lines—"clam-shell case"

1.9.3 Definition of the "cheek" position:

- Position the device with the vertical centre line of the body of the device and the horizontal line crossing the centre of the ear piece in a plane parallel to the sagittal plane of the phantom ("initial position" see Figure 6). While maintaining the device in this plane, align the vertical centre line with the reference plane containing the three

ear and mouth reference points (M, RE and LE) and align the centre of the ear piece with the line RE-LE;

- b) Translate the mobile phone box towards the phantom with the ear piece aligned with the line LE-RE until the phone touches the ear. While maintaining the device in the reference plane and maintaining the phone contact with the ear, move the bottom of the box until any point on the front side is in contact with the cheek of the phantom or until contact with the ear is lost.

1.9.4 Definition of the “tilted” position:

- a) Position the device in the “cheek” position described above;
- b) While maintaining the device in the reference plane described above and pivoting against the ear, move it outward away from the mouth by an angle of 15 degrees or until contact with the ear is lost.

Figure 6 - Definition of the reference lines and points, on the phone and on the phantom and initial position

Figure 7 -“Cheek” and “tilt” positions of the mobile phone on the left side

2.0 Recipes for Tissue Simulating Liquid

The following tables give the recipes for tissue simulating liquids to be used in different frequency bands.

Ingredient	835MHz	1900MHz
Water	40.29%	55.24%
Sugar	57.90%	-
Salt (NaCl)	1.38%	0.31%
DGBE	-	44.45%
Preventol	0.18%	-
HEC	0.24%	-
Relative Permittivity	41.5	40.0
Conductivity (S/m)	0.90	1.40

Table 1: Composition of the Head Tissue Equivalent Matter

Ingredient	835MHz	1900MHz
Water	50.75%	70.17%
Sugar	48.21%	-

Salt (NaCl)	0.94%	0.39%
DGBE	-	29.44%
Preventol	0.10%	-
Relative Permittivity	55.2	53.3
Conductivity (S/m)	0.97	1.52

Table 2: Composition of the Body Tissue Equivalent Matter

Ingredient	WiFi802.11b(Head)	WiFi802.11b(Body)
Water	45.0%	69.83%
DGBE	55.0%	30.17%
Relative Permittivity	39.2	52.7
Conductivity (S/m)	1.80	1.95

Table 3: Composition of the Head and Body Tissue Equivalent Matter

2.1 Measurement procedure

Step 1: Power reference measurement

The SAR measurement was taken at a selected spatial reference point to monitor power variations during testing. This fixed location point was measured and used as a reference value.

Step 2: Area scan

The SAR distribution at the exposed side of the head was measured at a distance of 3.9mm from the inner surface of the shell. The area covered the entire dimension of the head and the horizontal grid spacing was 20mm*20mm. Based on the area scan data, the area of the maximum absorption was determined by spline interpolation.

Step 3: Zoom scan

Around this point, a volume of 30mm*30mm*34mm (fine resolution volume scan, zoom scan) was assessed by measuring 7*7*7 points. On this basis of this data set, the spatial peak SAR value was evaluated with the following procedure:

The data at the surface was extrapolated, since the center of the dipoles is 2.1mm away from the tip of the probe and the distance between the surface and the lowest measuring point is 1.2mm. (This can be variable. Refer to the probe specification) The extrapolation was based on a least square algorithm. A polynomial of the fourth order was calculated through the points in z-axes. This polynomial was then used to evaluate the points between the surface and the probe tip. The maximum

interpolated value was searched with a straight-forward algorithm. Around this maximum the SAR values averaged over the spatial volumes (1g or 10g) were computed using the 3D-Spline interpolation algorithm. The volume was integrated with the trapezoidal algorithm. One thousand points (10*10*10) were interpolated to calculate the average. All neighboring volumes were evaluated until no neighboring volume with a higher average value was found.

Step 4: Power reference measurement (drift)

The SAR value at the same location as in step 1 was again measured. (If the value changed by more than 5%, the evaluation is repeated.)

2.2 The SAR Measurement System

A photograph of the SAR measurement System is given in Fig.8.

This SAR Measurement System uses a Computer-controlled 3-D stepper motor system (Speag Dasy 4 professional system). A Model ES3DV3 3088 E-field probe is used to determine the internal electric fields. The SAR can be obtained from the equation $SAR = \sigma (|E_i|^2) / \rho$ where σ and ρ are the conductivity and mass density of the tissue-simulant.

The DASY4 system for performing compliance tests consists of the following items:

- A standard high precision 6-axis robot (Stabile RX family) with controller, teach pendant and software. An arm extension for accommodation the data acquisition electronics (DAE).
- A dosimetric probe, i.e., an isotropic E-field probe optimized and calibrated for usage in tissue simulating liquid. The probe is equipped with an optical surface detector system.
- A data acquisition electronics (DAE) which performs the signal amplification, signal multiplexing, AD-conversion, offset measurements, mechanical surface detection, collision detection, etc. The unit is battery powered with standard or rechargeable batteries. The signal is optically transmitted to the EOC.
- The Electro-optical converter (EOC) performs the conversion between optical and electrical of the signals for the digital communication to DAE and for the analog signal from the optical surface detection. The EOC is connected to the measurement server.

Fig. 8 SAR System Configuration

- The function of the measurement server is to perform the time critical tasks such as signal filtering, control of the robot operation and fast movement interrupts.
- A probe alignment unit which improves the (absolute) accuracy of the probe positioning.
- A computer operating Windows 2000.
- DASY4 software.
- Remote control with teach pendant and additional circuitry for robot safety such as warning lamps, etc.
- The SAM twin phantom enabling testing left-hand, right-hand and body-worn usage.
- The device holder for handheld mobile phones.
- Tissue simulating liquid mixed according to the given recipes.
- Validation dipole kits allowing to validate the proper functioning of the system.

2.3 SAR System Verification

The microwave circuit arrangement for system verification is sketched in Fig. 9. The daily system accuracy verification occurs within the flat section of the SAM phantom. A SAR measurement was performed to see if the measured SAR was within $\pm 10\%$ from the target SAR values. These tests were done at 900MHz & 1900MHz & 2450 MHz. The tests were conducted on the same days as the measurement of the DUT. The obtained results from the system accuracy verification are displayed in the table 1 (SAR values are normalized to 1W forward power delivered to the dipole). During the tests, the ambient temperature of the laboratory was in the range 22°C, the relative humidity was in the range 60% and the liquid depth above the ear reference points was above 15 cm in all the cases. It is seen that the system is operating within its specification, as the results are within acceptable tolerance of the reference values.

2.4 Tissue Simulant Fluid for the Frequency Band 850MHz &1900MHZ&2450MHz

The dielectric properties for this body-simulant fluid were measured by using the HP Model 85070D Dielectric Probe (rates frequency band 200 MHz to 20 GHz) in conjunction with Agilent E5071B Network Analyzer (300 KHz-8500 MHz). The Conductivity (σ) and Permittivity (ρ) are listed in Table 2. For the SAR measurement given in this report. The temperature variation of the Tissue Simulant Fluid was 22°C.

Frequency (MHz)	Tissue Type	Limit/Measured	Permittivity (ρ)	Conductivity (σ)	Simulated Tissue Temp (°C)
850	Head	Measured, 2006-08-28	41.64	0.887	22.2

Table 4. Dielectric parameters for the Frequency Band 850MHz&1900MHZ&2450MHz

2.5 Test Standards and Limits

According to FCC 47 CFR §2.1093(d) the limits to be used for evaluation are based generally on criteria published by the American National Standards Institute (ANSI) for localized specific absorption rate (SAR) in Section 4.2 of "IEEE Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3KHz to 300GHz," ANSI/IEEE C95.1-1992, Copyright 1992 by the Institute of Electrical & Electronics Engineers, Inc., New York, New York 10071.

Human Exposure	Uncontrolled Environment General Population
Spatial Peak SAR (Brain)	1.60 mW/g (averaged over a mass of 1g)

Table 5. RF Exposure Limits

Notes:

1. Uncontrolled environments are defined as locations where there is potential exposure of individuals who have no knowledge or control of their potential exposure.

2. Summary of Results

Head SAR Results

Mode	Test Configuration		SAR, Averaged over 1g(W/kg)			Temperature ()	Verdict
	Channel/Power(dBm)		Low/31.5	Middle/31.6	High/31.7		
GSM850	Left	Cheek	0.567	0.688	0.810	22	Pass
		Tilt	0.355	0.440	0.515	22	Pass
	Right	Cheek	0.516	0.646	0.757	22	Pass
		Tilt	0.307	0.400	0.317	22	Pass
	Worst case Left/ Cheek	Using battery2	-	-	0.820	22	Pass
		WiFi active Using battery1	-	-	0.848	22	Pass
		WiFi active Using battery2	-	-	0.902	22	Pass

Mode	Test Configuration		SAR, Averaged over 1g(W/kg)			Temperature ()	Verdict
	Channel/Power(dBm)		Low/28.3	Middle/28.3	High/28.5		
PCS1900	Left	Cheek	0.305	0.323	0.347	22	Pass
		Tilt	0.301	0.351	0.366	22	Pass
	Right	Cheek	0.217	0.290	0.267	22	Pass
		Tilt	0.212	0.266	0.229	22	Pass
	Worst case Left/Tilt	Using battery2	-	-	0.354	22	Pass
		WiFi active Using battery1	-	-	0.517	22	Pass
		WiFi active Using battery2	-	-	0.512	22	Pass

Mode	Test Configuration		SAR, Averaged over 1g(W/kg)			Temperature ()	Verdict
	Channel/Power(dBm)		Low/17.2	Middle/16.8	High/16.3		
802.11b	Left	Cheek	0.253	0.230	0.200	22	Pass
		Tilt	0.229	0.191	0.156	22	Pass
	Right	Cheek	0.396	0.321	0.308	22	Pass
		Tilt	0.280	0.255	0.229	22	Pass
	Worst case	Using battery2	0.387	-	-	22	Pass

Body SAR Results

Mode	Test Configuration		SAR, Averaged over 1g(W/kg)			Temperature ()	Verdict
	Channel/Power(dBm)		Low/31.5	Middle/31.6	High/31.7		
GSM850	2 slot GPRS	Using battery1	0.961	1.03	0.999	22	Pass
	Worst case	Using battery2	-	1.03	-	22	Pass

Mode	Test Configuration		SAR, Averaged over 1g(W/kg)			Temperature ()	Verdict
	Channel/Power(dBm)		Low/28.3	Middle/28.3	High/28.5		
PCS1900	2 slot GPRS	Using battery1	0.380	0.575	0.701	22	Pass
	Worst case	Using battery2	-	-	0.682	22	Pass

Mode	Test Configuration		SAR, Averaged over 1g(W/kg)			Temperature ()	Verdict
	Channel/Power(dBm)		Low/17.2	Middle/16.8	High/16.3		
802.11b	CCK	5.5M bps	0.072	0.074	0.070	22	Pass
	Worst case	Using battery2	-	0.074	-	22	Pass

Maximum Results

Head

Mode	Conducted Power	Configuration	SAR Limit (1g averaged)	Measured Value	Power Drift	Verdict
GSM850+WiFi	31.7dBm	Left/Cheek/Battery2	1.6W/Kg	0.902W/Kg	-0.037dB	Pass
PCS1900+WiFi	28.5dBm	Left/Tilt/Battery1	1.6W/Kg	0.517W/Kg	-0.207dB	Pass

Body

Mode	Conducted Power	Configuration	SAR Limit (1g averaged)	Measured Value	Power Drift	Verdict
2 slots GPRS850	31.6dBm	Middle Channel	1.6W/Kg	1.03W/Kg	-0.109dB	Pass
2 slots GPRS1900	28.5dBm	High Channel	1.6W/Kg	0.701W/Kg	-0.077dB	Pass

Note:

1. In GSM 850 band, the low, middle and high channels are CH128/824.2MHz, CH189/836.4MHz and CH251/848.8MHz separately.
2. In PCS 1900 band, the low, middle and high channels are CH512/1805.2MHz, CH661/1880.0MHz and CH810/1909.8MHz separately.
3. In WiFi802.11b, the low, middle and high channels are CH01/2412MHz, CH06/2437MHz and CH11/2462MHz separately
4. For the GSM Bodyworn measurements the sample was only placed with the antenna toward the phantom since this position delivers the highest SAR values, and the distance is 2.0 cm.
5. The Mobile Station (MS) supports Voice over WLAN, but can not have the GPRS and 802.11b working simultaneously.
6. There are two kinds of batteries applied: Battery1 and Battery2, which have the same shape but from different providers. They provide the MS with the same output power

3. Instruments List

Instrument	Model	Serial number	NO.	Date of last Calibration
Desktop PC	COMPAQ EVO	N/A	GSM-SAR-025	N/A
Dasy 4 software	V 4.6 build 23	N/A	GSM-SAR-001	N/A
Probe	ES3DV3	3088	GSM-SAR-034	2005.09.13
DAE	DAE3	569	GSM-SAR-023	2005.11.17

4. Measurements

4.1 LeftHandSide-Cheek-GSM850-Low

Date/Time: 2006-8-28 12:47:47

Test Laboratory: SGS-GSM

GSM850-LeftHandSide-Cheek-Low

DUT: GSM10035468AH; Type: Head; Serial: 35287400000002-8

Communication System: GSM850-GSM Mode; Frequency: 824.2 MHz; Duty Cycle: 1:8.3

Medium: HSL850-Head Medium parameters used: $f = 824.2$ MHz; $\sigma = 0.875$ mho/m; $\epsilon_r = 42.4$; $\rho = 1000$ kg/m³

Phantom section: Left Section

Measurement Standard: DASY4 (High Precision Assessment)

DASY4 Configuration:

- Probe: ES3DV3 - SN3088; ConvF(5.91, 5.91, 5.91); Calibrated: 2005-9-13
- Sensor-Surface: 4mm (Mechanical Surface Detection)
- Electronics: DAE3 Sn569; Calibrated: 2005-11-17
- Phantom: SAM 12; Type: SAM V4.0; Serial: TP-1283
- Measurement SW: DASY4, V4.6 Build 23; Postprocessing SW: SEMCAD, V1.8 Build 160

Cheek position - Low/Area Scan (61x101x1): Measurement grid: dx=15mm, dy=15mm

Maximum value of SAR (interpolated) = 0.595 mW/g

Cheek position - Low/Zoom Scan (7x7x7)/Cube 0: Measurement grid: dx=5mm, dy=5mm, dz=5mm

Reference Value = 21.5 V/m; Power Drift = 0.046 dB

Peak SAR (extrapolated) = 0.794 W/kg

SAR(1 g) = 0.567 mW/g; SAR(10 g) = 0.389 mW/g

Maximum value of SAR (measured) = 0.604 mW/g

0 dB = 0.604mW/g

4.2LeftHandSide-Cheek-GSM850-Middle

Date/Time: 2006-8-28 11:50:53

Test Laboratory: SGS-GSM

GSM850-LeftHandSide-Cheek-Middle

DUT: GSM10035468AH; Type: Head; Serial: 35287400000002-8

Communication System: GSM850-GSM Mode; Frequency: 836.4 MHz; Duty Cycle: 1:8.3

Medium: HSL850-Head Medium parameters used: $f = 836.4$ MHz; $\sigma = 0.886$ mho/m; $\epsilon_r = 42.3$; $\rho = 1000$ kg/m³

Phantom section: Left Section

Measurement Standard: DASY4 (High Precision Assessment)

DASY4 Configuration:

- Probe: ES3DV3 - SN3088; ConvF(5.91, 5.91, 5.91); Calibrated: 2005-9-13
- Sensor-Surface: 4mm (Mechanical Surface Detection)
- Electronics: DAE3 Sn569; Calibrated: 2005-11-17
- Phantom: SAM 12; Type: SAM V4.0; Serial: TP-1283
- Measurement SW: DASY4, V4.6 Build 23; Postprocessing SW: SEMCAD, V1.8 Build 160

Cheek position - Mid/Area Scan (61x101x1): Measurement grid: dx=15mm, dy=15mm

Maximum value of SAR (interpolated) = 0.730 mW/g

Cheek position - Mid/Zoom Scan (7x7x7) (7x7x7)/Cube 0: Measurement grid: dx=5mm, dy=5mm, dz=5mm

Reference Value = 23.1 V/m; Power Drift = 0.060 dB

Peak SAR (extrapolated) = 0.969 W/kg

SAR(1 g) = 0.688 mW/g; SAR(10 g) = 0.476 mW/g

Maximum value of SAR (measured) = 0.732 mW/g

0 dB = 0.732mW/g

4.3LeftHandSide-Cheek-GSM850-High

Date/Time: 2006-8-28 13:12:36

Test Laboratory: SGS-GSM

GSM850-LeftHandSide-Cheek-High

DUT: GSM10035468AH; Type: Head; Serial: 35287400000002-8

Communication System: GSM850-GSM Mode; Frequency: 848.8 MHz;Duty Cycle: 1:8.3

Medium: HSL850-Head Medium parameters used: $f = 848.8$ MHz; $\sigma = 0.896$ mho/m; $\epsilon_r = 42.3$; $\rho =$

1000 kg/m³

Phantom section: Left Section

Measurement Standard: DASY4 (High Precision Assessment)

DASY4 Configuration:

Accreditation No.: **SCS 108**

Client **SGS-CSTS (MTT)**

Certificate No: **ES3-3088_Sep05**

CALIBRATION CERTIFICATE

Object **ES3DV3 - SN:3088**

Calibration procedure(s) **QA CAL-01.v5
Calibration procedure for dosimetric E-field probes**

Calibration date: **September 13, 2005**

Condition of the calibrated item **In Tolerance**

This calibration certificate documents the traceability to national standards, which realize the physical units of measurements (SI).
The measurements and the uncertainties with confidence probability are given on the following pages and are part of the certificate.

All calibrations have been conducted in the closed laboratory facility: environment temperature $(22 \pm 3)^{\circ}\text{C}$ and humidity $< 75\%$.

Calibration Equipment used (M&TE critical for calibration)

Primary Standards	ID #	Cal Date (Calibrated by, Certificate No.)	Scheduled Calibration
Power meter E4419B	0B41293874	3-May-05 (METAS, No. 251-00486)	May-06

Glossary:

TSL	tissue simulating liquid
NORM _{x,y,z}	sensitivity in free space
ConF	sensitivity in TSL / NORM _{x,y,z}
DCP	diode compression point
Polarization ϕ	ϕ rotation around probe axis
Polarization θ	θ rotation around an axis that is in the plane normal to probe axis (at measurement center), i.e., $\theta = 0$ is normal to probe axis

Calibration is Performed According to the Following Standards:

- IEEE Std 1528-2003, "IEEE Recommended Practice for Determining the Peak Spatial-Averaged Specific Absorption Rate (SAR) in the Human Head from Wireless Communications Devices: Measurement Techniques", December 2003
- CENELEC EN 50361, "Basic standard for the measurement of Specific Absorption Rate related to human exposure to electromagnetic fields from mobile phones (300 MHz - 3 GHz), July 2001

Methods Applied and Interpretation of Parameters:

- NORM_{x,y,z}**: Assessed for E-field polarization $\theta = 0$ ($f \leq 900$ MHz in TEM-cell; $f > 1800$ MHz: R22 waveguide). NORM_{x,y,z} are only intermediate values, i.e., the uncertainties of NORM_{x,y,z} does not effect the E²-field uncertainty inside TSL (see below ConF).
- NORM(f)_{x,y,z}** = NORM_{x,y,z} * frequency_response (see Frequency Response Chart). This linearization is implemented in DASY4 software versions later than 4.2. The uncertainty of the frequency response is included in the stated uncertainty of ConF.
- DCP_{x,y,z}**: DCP are numerical linearization parameters assessed based on the data of power sweep (no uncertainty required). DCP does not depend on frequency nor media.
- ConF and Boundary Effect Parameters**: Assessed in flat phantom using E-field (or Temperature Transfer Standard for $f \leq 800$ MHz) and inside waveguide using analytical field distributions based on power measurements for $f > 800$ MHz. The same setups are used for assessment of the parameters applied for boundary compensation (alpha, depth) of which typical uncertainty values are given. These parameters are used in DASY4 software to improve probe accuracy close to the boundary. The sensitivity in TSL corresponds to NORM_{x,y,z} * ConF whereby the uncertainty corresponds to that given for ConF. A frequency dependent ConF is used in DASY version 4.4 and higher which allows extending the validity from ± 50 MHz to ± 100 MHz.
- Spherical Isotropy (3D deviation from isotropy)**: In a field of low gradients realized using a flat phantom exposed by a patch antenna.
- Sensor Offset**: The sensor offset corresponds to the offset of virtual measurement center from the probe tip (on probe axis). No tolerance required.

ES3DV3 SN:3088

September 13, 2005

Probe ES3DV3

SN:3088

Manufactured:	July 20, 2005
Calibrated:	September 13, 2005

Calibrated for DASY Systems

(Note: non-compatible with DASY2 system!)

ES3DV3 SN:3088

September 13, 2005

DASY - Parameters of Probe: ES3DV3 SN:3088**Sensitivity in Free Space^A****Diode Compression^B**

NormX	1.32 ± 10.1%	$\mu\text{V}/(\text{V}/\text{m})^2$	DCP X	95 mV
NormY	1.24 ± 10.1%	$\mu\text{V}/(\text{V}/\text{m})^2$	DCP Y	95 mV
NormZ	1.23 ± 10.1%	$\mu\text{V}/(\text{V}/\text{m})^2$	DCP Z	95 mV

Sensitivity in Tissue Simulating Liquid (Conversion Factors)

Please see Page 8.

Boundary Effect

TSL 900 MHz Typical SAR gradient: 5 % per mm

Sensor Center to Phantom Surface Distance		3.0 mm	4.0 mm
SAR _{iso} [%]	Without Correction Algorithm	5.8	2.7
SAR _{iso} [%]	With Correction Algorithm	0.0	0.1

TSL 1750 MHz Typical SAR gradient: 10 % per mm

Sensor Center to Phantom Surface Distance		3.0 mm	4.0 mm
SAR _{iso} [%]	Without Correction Algorithm	7.6	4.5
SAR _{iso} [%]	With Correction Algorithm	0.1	0.2

Sensor Offset

Probe Tip to Sensor Center 2.0 mm

The reported uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k=2, which for a normal distribution corresponds to a coverage probability of approximately 95%.

^A The uncertainties of NormX,Y,Z do not affect the E²-field uncertainty inside TSL (see Page 8).^B Numerical linearization parameter: uncertainty not required.

Certificate of conformity / First Article Inspection

Item	SAM Twin Phantom V4.0
Type No	QD 000 P40 CA
Series No	TP-1150 and higher
Manufacturer / Origin	Untersee Composites Hauptstr. 69 CH-8559 Fruttwilen Switzerland

Tests

The series production process used allows the limitation to test of first articles. Complete tests were made on the pre-series Type No. QD 000 P40 AA, Serial No. TP-1001 and on the series first article Type No. QD 000 P40 BA, Serial No. TP-1006. Certain parameters have been retested using further series units (called samples).

Test	Requirement	Details	Units tested
Shape	Compliance with the geometry according to the CAD model.	ITIS CAD File (*)	First article, Samples
Material thickness	Compliant with the requirements according to the standards	2mm +/- 0.2mm in specific areas	First article, Samples
Material parameters	Dielectric parameters for required frequencies	200 MHz - 3 GHz Relative permittivity < 5 Loss tangent < 0.05	Material sample TP 104-5
Material resistivity	The material has been tested to be compatible with the liquids defined in the standards	Liquid type HSL 1800 and others according to the standard.	Pre-series, First article

Standards

- [1] CENELEC EN 50361
- [2] IEEE P1528-200x draft 6.5
- [3] IEC PT 62209 draft 0.9
- (*) The ITIS CAD file is derived from [2] and is also within the tolerance requirements of the shapes of [1] and [3].

Conformity

Based on the sample tests above, we certify that this item is in compliance with the uncertainty requirements of SAR measurements specified in standard [1] and draft standards [2] and [3].
