Giant Electronics Ltd.  
Elite Industrial Building,  
135-137 Hoi Bun Road, Kwun Tong,  
Kowloon, Hong Kong.

Dear Mr. Y. K. Ling:

Enclosed you will find your file copy of a Part 95 Certification (FCC ID: K7GT5500).

For your reference, TCB will normally take another 15-20 days for reviewing the report. Approval will then be granted when no query is sorted.

Please contact me if you have any questions regarding the enclosed material.

Sincerely,

Wilson Loke  
Manager

# **INTERTEK TESTING SERVICES**

---

## **EXHIBIT 1**

### **GENERAL DESCRIPTION**

## INTERTEK TESTING SERVICES

---

### 1.0 General Description

#### 1.1 Product Description

The Equipment Under Test (EUT) is a Two Way Radio with FRS and GMRS operating at 462.5500 and 467.7125MHz. The EUT is powered by 4.5V d.c. (3 x 1.5V "AA" size alkaline batteries).

##### Transmitter Portion

- i) Type of Emission : 10k2F3E
- ii) Frequency Range : FRS 7 Channels from 467.5625 to 467.7125MHz  
GMRS 15 Channels from 462.5500 to 462.7250MHz
- iii) Maximum Power Rating : FRS - 0.265W ERP, GMRS - 0.275W ERP
- iv) Antenna Type : Integral

The Model: Giant T5510, Giant T5520 and Giant T5550 are the same as the Model: Giant T5500 in hardware aspect except that Giant T5510 has no 22 RF Channel Scan function and Giant T5520 has 5 call tone only and no VOX function.

For electronic filing, the brief circuit description is saved with filename: descri.pdf

## INTERTEK TESTING SERVICES

---

### 1.2 Related Submittal(s) Grants

This is an Application for Certification of the transmitter portion of a GMRS + FRS Transceiver. The receiver section of this Transceiver is subject to verification process.

### 1.3 Test Methodology

Radiated emission measurements were performed according to the procedures in ANSI C63.4 (1992) and ANSI/TIA/EIA-603-1992. All measurement were performed in Open Area Test Sites. Preliminary scans were performed in the Open Area Test Sites only to determine worst case modes. For each scan, the procedure of maximizing emissions in Appendices D and E were followed. All Radiated tests were performed at an antenna the EUT distance of 3 meters, unless stated otherwise in the “**Justification Section**” of this Application.

### 1.4 Test Facility

The open area test site and conducted measurement facility used to collect the emission data is located at Garment Centre, 576 Castle Peak Road, Kowloon, Hong Kong. The test facility and site measurement data have been fully placed on file with the FCC.

## **INTERTEK TESTING SERVICES**

---

### **EXHIBIT 2**

### **SYSTEM TEST CONFIGURATION**

## INTERTEK TESTING SERVICES

---

### 2.0 System Test Configuration

#### 2.1 Justification

The device was configured for testing in a typical fashion (as a customer would normally use it). The device was placed on a turntable, which enabled the engineer to maximize emissions through its placement in the three orthogonal axes. When the radiated emissions are measured.

The device was powered by 3 fully charged 1.5V "AA" alkaline batteries.

The frequency range from 30 MHz to 4.69 GHz was searched for spurious emissions from the device. Only those emissions reported were detected. All other emissions were at least 20 dB below the applicable limits.

## INTERTEK TESTING SERVICES

---

### 2.2 EUT Exercising Software

There was no special software to exercise the device. Once the unit is powered on, a signal is transmitted.

### 2.3 Special Accessories

No special accessory is needed for compliance of this device.

A supplied headset is used during the test.

### 2.4 Measurement Uncertainty

When determining of the test conclusion, the Measurement Uncertainty of test has been considered.

### 2.5 Equipment Modification

Any modification installed previous to testing by Giant Electronics Ltd. will be incorporated in each production model sold/leased in the United States.

No modification were installed by Intertek Testing Services.

*Confirmed by:*

## **INTERTEK TESTING SERVICES**

---

### **EXHIBIT 3**

#### **RF POWER OUTPUT**

---

## INTERTEK TESTING SERVICES

---

### 3.0 **RF Power Output (Section 2.1046(a))**

#### A. Equipment Used

| Equipment            | Brand Name      | Model No.        |
|----------------------|-----------------|------------------|
| Biconical Antenna    | CDI             | B300             |
| Test receiver        | Rohde & Schwarz | ESVS30           |
| RF Filter            | Tailithic       | 3VF              |
| Tuned Dipole Antenna | CDI             | Robert Antenna 4 |
| Signal Generator     | Maconi          | 2024             |

#### B. Testing Procedure

1. On a test site, the EUT shall be placed at 1.5m height on a turn table, and in the position closest to normal use as declared by the applicant.
2. The test antenna shall be oriented initially for vertical polarisation located 3m from EUT to correspond to the frequency of the transmitter.
3. The output of the test antenna shall be connected to the measuring receiver and the quasi-peak detector is used for the measurement.
4. The transmitter shall be switched on, if possible, without modulation and the measuring receiver shall be tuned to the frequency of the transmitter under test.
5. The test antenna shall be raised and lowered through the specified range of height until a maximum signal level is detected by the measuring receiver.

## INTERTEK TESTING SERVICES

---

6. The transmitter shall then be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
7. The test antenna shall be raised and lowered again through the specified range of height until a maximum signal level is detected by the measuring receiver.
8. The maximum signal level detected by the measuring receiver shall be noted.
9. The transmitter shall be replaced by a tuned dipole (substitution antenna).
10. The substitution antenna shall be orientated for vertical polarisation and the length of the substitution antenna shall be adjusted to correspond to the frequency of the transmitter.
11. The substitution antenna shall be connected to a calibrated signal generator.
12. If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
13. The test antenna shall be raised and lowered through the specified range of height to ensure that the maximum signal is received.
14. The input signal to the substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuator setting of the measuring receiver.
15. The input level to the substitution antenna shall be recorded as power level in dBm, corrected for any change of input attenuator setting of the measuring receiver.
16. The measurement shall be repeated with the test antenna and the substitution antenna orientated for horizontal polarisation.
17. The measure of the effective radiated power is the larger of the two levels recorded, at the input to the substitution antenna, corrected for gain of the substitution antenna if necessary.

### **MODULATION CHARACTERISTICS**

## INTERTEK TESTING SERVICES

---

### 4.0 Modulation Characteristics

In order to satisfy the 95.637(a) requirement, Modulation Frequency Response and Modulation Limit Characteristics are attached in Exhibit 4.1 & 4.2.

Plots for each tests are saved with filename: mfr.pdf and mlc.pdf

---

## INTERTEK TESTING SERVICES

---

### 4.1 Modulation Frequency Response

#### A. Test Equipment

| Equipment              | Brand Name         | Model No.  |
|------------------------|--------------------|------------|
| Audio Signal Generator | Leader             | LFG-1300S  |
| dB meter               | Leader             | LMV-182A   |
| 20 dB RF Load          | Bird               | 8304-200-N |
| Modulation Meter       | Marconi Instrument | 2945       |

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Set the audio signal generator frequency to the sound pressure level 107 dBSPL at the microphone of the EUT.
- 3) The frequency of the audio signal generator is changed from 300Hz to 5kHz.
- 4) Record the frequency deviation.

## INTERTEK TESTING SERVICES

---

### 4.2 Modulation Limiting Characteristics (Section 2.1047(b))

#### A. Test Equipment

| Equipment              | Brand Name | Model No.  |
|------------------------|------------|------------|
| Audio Signal Generator | Leader     | LFG-1300S  |
| 20 dB RF Load          | Bird       | 8304-200-N |
| Modulation Meter       | Marconi    | 2950       |

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Set the frequency of the audio signal generator to 500Hz and adjust the level from 47dBSPL to 137dBSPL.
- 3) Record the maximum value of plus or minus peak frequency deviation.
- 4) Repeat the above procedure with frequency 1000Hz, 2500Hz & 3125Hz.

### 4.3 Audio Low Pass Filter Response (Section 95.637(b))

#### A. Test Equipment

| Equipment              | Brand Name | Model No. |
|------------------------|------------|-----------|
| Audio Signal Generator | Leader     | LFG-1300S |
| dB meter               | Leader     | LMV-182A  |

#### B. Testing Procedure

- 1) Connect the audio signal generator to the input of the post limiter low pass filter and the dB meter to the output of the post limiter low pass filter.
- 2) Apply a 1000 Hz tone from the audio signal generator and adjust the level per manufacturer's specifications. Record the dB level of the 1000 Hz tone as  $LEV_{REF}$ .
- 3) Set the audio signal generator to the desired test frequency between 3000 Hz and the upper low pass filter limit. Record the dB level at the test frequency as  $LEV_{FREQ}$ .
- 4) Calculate the audio frequency response at the test frequency as:

$$\text{low pass filter response} = LEV_{FREQ} - LEV_{REF}$$

- 5) Repeat the above procedure for all the desired test frequencies.

#### C. Test Result

For electronic filing, the audio low pass frequency response is saved with filename: lpf.pdf.

### 5.0 Occupied Bandwidth (Section 95.633(c))

#### A. Test Equipment

| Equipment              | Brand Name      | Model No.  |
|------------------------|-----------------|------------|
| Audio Signal Generator | Leader          | LFG-1300S  |
| dB meter               | Leader          | LMV-182A   |
| 20 dB RF Load          | Bird            | 8304-200-N |
| Spectrum Analyzer      | Hewlett Packard | 8951EM     |

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Set the level of audio signal generator to obtain 16 dB greater than required for 50% modulation.
- 3) The occupied bandwidth is measured with the spectrum analyzer set at 5kHz/div scan and 10dB/div.

#### C. Test Result

The occupied Bandwidth is measured to be 10.5 kHz.

For the electronic filing, the bandwidth plot is saved with filename: bw.pdf

## INTERTEK TESTING SERVICES

---

### 6.1 Field Strength of Spurious Radiation (Section 95.635)

#### A. Test Equipment

| Equipment     | Brand Name      | Model No.            |
|---------------|-----------------|----------------------|
| Antenna       | CDI             | B100,B200,B300, Horn |
| Test receiver | Rohde & Schwarz | ESVS30               |
| RF Filter     | Tailithic       | 3VF                  |

#### B. Testing Procedure

Radiated emission measurements were performed according to the procedures in ANSI C63.4(1992). All measurements were performed in Open Area Test Sites located at Roof Top of Garment Centre, 576 Castle Peak Road, Kowloon, Hong Kong.

| 3238.400           | -48.1                                   | 24.8                           | 72.9                | 37.8          | 35.1           |
| 3701.030           | -51.6                                   | 24.8                           | 76.4                | 37.8          | 38.6           |
| 4163.660           | -49.6                                   | 24.8                           | 74.4                | 37.8          | 36.6           |
| 4626.290           | -52.7                                   | 24.8                           | 77.5                | 37.8          | 39.7           |

- Remark:
1. Transmission power is 24.8 dBm or -5.2 dB(W).
  2. According to Section 95.635(b7), the unwanted emission should be attenuated below TP by at least  $43 + 10 \log_{10}(TP)$  dB or 37.8 dB.
  3. The test is performed according to ANSI/TIA/EIA -603-1992.

Test Engineer: Ben W. K. Ho

Date of Test: February 4, 2004

| 4208.680           | -49.1                                   | 24.6                           | 73.7                | 37.6          | 36.1           |
| 4676.310           | -53.3                                   | 24.6                           | 77.9                | 37.6          | 40.3           |

- Remark:
1. Transmission power is 24.6 dBm or -5.4 dB(W).
  2. According to Section 95.635(b7), the unwanted emission should be attenuated below TP by at least  $43 + 10 \log_{10}(TP)$  dB or 37.6 dB.
  3. The test is performed according to ANSI/TIA/EIA -603-1992.

Test Engineer: Ben W. K. Ho

Date of Test: February 4, 2004

## **INTERTEK TESTING SERVICES**

---

### **EXHIBIT 7**

### **FREQUENCY STABILITY**

## INTERTEK TESTING SERVICES

---

### 7.0 **Frequency Stability**

The frequency tolerance was tested in normal condition & over extreme ambient conditions with respect to voltage and temperature variation.

---

## INTERTEK TESTING SERVICES

---

### 7.1 Frequency Tolerance (Section 95.627)

#### A. Test Equipment

| Equipment              | Brand Name | Model No.  |
|------------------------|------------|------------|
| Regulated Power Supply | PAD        | 30-35L     |
| 20 dB RF Load          | Bird       | 8304-200-N |
| Frequency Counter      | Phillips   | PM6668     |

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Measure all transmit channel frequencies in MHz.

---

## INTERTEK TESTING SERVICES

---

### C. Test Result

Table 5

Giant Electronics Ltd.  
Giant T5500

#### Frequency Tolerance

| Channel | Frequency<br>(MHz) | Measured<br>Frequency (MHz) | Tolerance<br>(%) |
|---------|--------------------|-----------------------------|------------------|
| 1       | 462.5625           | 462.56150                   | -0.000216        |
| 2       | 462.5875           | 462.58650                   | -0.000216        |
| 3       | 462.6125           | 462.61150                   | -0.000216        |

### 7.2 Frequency Stability - Temperature (Section 2.1055)

#### A. Test Equipment

| Equipment         | Brand Name | Model No.  |
|-------------------|------------|------------|
| 20 dB RF Load     | Bird       | 8304-200-N |
| Frequency Counter | Phillips   | PM6668     |

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Set the Temperature Chamber to -20°C and stabilize the EUT temperature for one hour. Set transmitter ON for two minutes.
- 3) Measure the channel frequency of channel 4, 11 in MHz.
- 4) Turn the EUT OFF
- 5) Repeat the above procedure from -20°C to 50°C with 10°C increment.

### 7.3 Frequency Stability - Voltage (Section 2.995)

#### A. Test Equipment

| Equipment              | Brand Name | Model No.  |
|------------------------|------------|------------|
| Regulated Power Supply | PAD        | 30-35L     |
| 20 dB RF Load          | Bird       | 8304-200-N |
| Voltage meter          | Fluke      | 87         |
| Frequency Counter      | Phillips   | PM6668     |

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Vary the level of regulated power supply to the manufacturer specified battery end point of the EUT.
- 3) Measure the channel frequency of channel 4 and 11 in MHz.
