3. ANALYTICAL CONSIDERATIONS

2000

Figure 10. Estimated spectra for the 1000- and 10000- $\text{W} \cdot \text{m}^{-2}$ high-altitude (near-foot) spectra after correcting for atmospheric attenuation. For the 1000- $\text{W} \cdot \text{m}^{-2}$ spectrum, the model spectra from 1000 to 10000 $\text{W} \cdot \text{m}^{-2}$ are shown. The 10000- $\text{W} \cdot \text{m}^{-2}$ spectrum is shown for comparison. The 10000- $\text{W} \cdot \text{m}^{-2}$ spectrum is shown for comparison. The 10000- $\text{W} \cdot \text{m}^{-2}$ spectrum is shown for comparison.

1. Analyze the data to determine the most significant factors influencing the results.
2. Develop a hypothesis based on the findings of the analysis.
3. Design an experiment to test the hypothesis, ensuring that all variables are controlled.
4. Conduct the experiment, collecting data and observing the results.
5. Analyze the experimental data to determine if the hypothesis is supported or refuted.
6. Draw conclusions based on the results of the experiment and the initial analysis.

by Robert M. Anderson

1. *Explain the difference between the two types of models, as defined in the text. Do you consider it desirable to have a single model, and if the data indicate, how can you determine the best model? Do you consider it desirable to have the model fit the data, and if the data indicate, how can you determine the best model? Do you consider it desirable to have the model fit the data, and if the data indicate, how can you determine the best model?*

W. LEE BATTERY INDICATION / THERMAL HISTORY

1. *Univariate analysis*: When the statistical analysis is performed using categorical variables only, the analysis is called univariate analysis. For example, the analysis of the relationship between sex and the occurrence of a disease is a univariate analysis.

When the conditions in the 1990s were less favorable, and resulted in 10 months with only a 15 percent change in the share of the national and worldwide effort, the committee left in 1991. It was not, as the committee has described in its report, a result of some major "wrong" thing. On the contrary, it was a sign of the "immaturity" of the new, young, and growing industry.

PACKAGE CONTENTS

Copyright © 2007 by The McGraw-Hill Companies, Inc.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

RF warning for Portable device: The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
