

American Telecommunications Certification Body Inc.

6731 Whittier Ave, McLean, VA 22101

October 2, 2001

RE: UTStarcomm
FCC ID: O6YUTS-800FSU

There are still some outstanding issues which are not resolved on the Application.

- 1.) Table 6.1 of the Test Report is in error. Power Output to antenna is listed in dBm and then converted to EIRP. This is in error – should be simply watts or milliwatts.
- 2.) Occupied Bandwidth is still in error. Resolution Bandwidth used is 300Hz when it should be approximately 1% of emission bandwidth. This should be approximately 3 KHz for 300 KHz wide emission bandwidths. Please redo.
- 3.) Occupied Bandwidth is not set up so Reference Level is equal to conducted power output. Please redo.
- 4.) Limit values in tables 9.1, 9.2, 9.3 appear to be calculated incorrectly. This also makes me question the rest of your procedure. As an example, if the limit is $43 + 10\log P$ (-13dBm) and I add 25.1dBc I should approach the radiated power output of ~167mW. This is not happening Please review. Provide sample calculations as needed.
- 5.) On your answer to my question #1 of 09/17/2001, what does it mean to "...get the manufacturer's data from Scott..."?
- 6.) RF Exposure information mixes up mobile and fixed category language. Also, no calculations are presented. Please remedy
- 7.) Be sure language in RF Exposure information and Manual match.

William H. Graff
Examining Engineer
President and Director of Engineering
