

12

-
- Figure 1 displays a 3x3 grid of scatter plots illustrating the relationship between the number of children and the number of children in the household. The rows represent different levels of the 'Number of children' variable (1, 2, 3) and the columns represent different levels of the 'Number of children in the household' variable (1, 2, 3). Each plot shows a positive correlation between the two variables.

These results suggest that the use of a single, standard, non-validated, self-report questionnaire to assess physical activity is associated with a greater risk of misclassification. The use of a validated questionnaire, such as the IPAQ, may reduce the risk of misclassification and increase the validity of the results. The use of a validated questionnaire, such as the IPAQ, may also increase the reliability of the results. The use of a validated questionnaire, such as the IPAQ, may also increase the validity of the results. The use of a validated questionnaire, such as the IPAQ, may also increase the validity of the results.

Support Systems Analysis

Real Buttons Press and hold "reset" button for 5 sec. reset's success.
