The vehicle to vehicle radio antenna is connected to the RC-7W through a non-commodity connector. This makes it impractical to connect an unsanctioned antenna to the RC-7W. The connect is keyed automotive RF connector. Specifically, a FAKRA with keying "K". An explanation of this connector family is available at: <https://amphenolrf.wordpress.com/2015/01/08/fakra-series-part-1-connector-keys-and-codes-explained/>
