# 802.11b/g Wireless LAN USB2.0 Adapter

**User's Manual** 

# **REGULATORY STATEMENTS**

### **FCC Certification**

The United States Federal Communication Commission (FCC) and the Canadian Department of Communications have established certain rules governing the use of electronic equipment. The 802.11b/g Wireless LAN USB2.0 Adapter has been tested to the FCC exposure requirements (Specific Absorption Rate) measured value of 0.998 watts/kg

### Part15, Class B

Warning: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the distance between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

#### CAUTION:

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment, under 47 CFR 2.1093 paragraph (d)(2).

# **INTRODUCTION**

The **802.11b/g Wireless LAN USB2.0 Adapter** is a device that allows you connect your computer to a wireless local area network (LAN). A wireless LAN allows your system to use wireless Radio Frequency (RF) technology to transmit and receive data without physically attaching to the network. The Wireless protocols that come with this product ensure data security and isolation from interference generated by other radio frequencies.

This Adapter also allows you to take full advantage of your computer's mobility with access to real-time information and online services anytime and anywhere. In addition, this device eliminates the bother of pulling cable through walls and under furniture. It even allows you to place your system in locations where cabling is impossible. Modifying and augmenting networks has never been so easy.

# **Wireless Network Options**

#### The Peer-to-Peer Network

This network installation lets you set a small wireless workgroup easily and quickly. Equipped with Wireless USB Adapter, you can share files and printers between each PC and laptop.

- 1 -

Wireless &Cl Cable/DSL Modem Internet

> Wireless PC Card

You can also use one computer as an Internet Server to connect to a wired global network and share files and information with other computers via a wireless LAN.

#### **The Access Point Network**

The network installation allows you to share files, printers, and Internet access much more conveniently. With Wireless LAN Adapters, you can connect wireless LAN to a wired global network via an **Access Point**.

### **LED Indicators For Wireless USB Adapter**

#### Link Indicator: (Green LED)

The Link LED will appear as solid green when the Wireless USB Adapter is connected with an AP. If the Wireless USB Adapter is not connected with an AP, the power LED will be blank.

#### Act Indicator: (Green LED)

The Act LED will be blinking green when transmitting/receiving wireless data.

- 2 -

# **INSTALLATION**

**Caution:** Do not insert the **Wireless USB Adapter** into your computer until the procedures in "**Install the Driver & Utility**" has been performed.

### **Install the Driver & Utility**

3. Exit all Windows programs. Insert the CD-ROM into the CD-ROM drive of your computer.

If the CD-ROM is not launched automatically, go to your CD-ROM drive (e.g. drive D) and double-click on **Setup.exe.** 

4. The main screen of the CD-ROM opens. Click **Install Driver & Utility** to start the installation.

5. When the Welcome screen appears, click **Next** to continue.

6. The **Choose Destination Location** screen will show you the default destination chosen by the utility. Click **Next** to continue.

7. Follow the instruction to select the program folder. Click **Next** to continue.

- 4 -

9. Select **Yes**, **I want to restart my computer now** and click **Finish** to complete the software installation.

- 5 -

### **Install the device**

Do not insert the USB Adapter into your computer until the procedures in "Install Driver & Utility" have been performed"

- 1. Locate your USB host and insert the USB Adapter
- 2. Once the device has been inserted to your computer, Windows will detect the new hardware.

#### Note for Windows 98 users:

Before installation of the device, make sure you have your operating system CD-ROM at hand. You may be asked to insert the OS CD-ROM in order to download specific drivers.

#### Note for Windows XP users:

#### - 6 -

# 4. Click **Finish** to complete the installation.

### **Verify Device Installation**

To verify that the device has been properly installed in your computer and is enabled, go to Start  $\rightarrow$  Settings  $\rightarrow$  Control Panel  $\rightarrow$  System ( $\rightarrow$  Hardware)  $\rightarrow$  Device Manager. Expand the Network adapters item. If the 802.11g Wireless USB Adapter is listed, it means that your device is properly installed and enabled.

- 7 -

- 8 -

# **NETWORK CONNECTION**

Once the driver has been installed, you will need to make adjustments to your network settings.

# In Windows 98/ME

- 1. Go to Start  $\rightarrow$  Settings  $\rightarrow$  Control Panel  $\rightarrow$  Network.
- 2. Make sure that you have all the following components installed.

Network ? 🗙
Configuration   Identification   Access Control
The following network components are installed:
Client for Microsoft Networks
802.11g Wireless USB Adapter
Be Diarop Adapter
Realtek RTL8139(A) PCI Fast Ethernet Adapter
■ Realtek RTL8139(A)-based PCI Fast Ethernet Adapter
Add Remove Properties

Description
A network adapter is a hardware device that physically
connects your computer to a network.
OK Cancel

- 802.11g Wireless USB Adapter
- IPX/SPX-compatible Protocol
- NetBEUI
- TCP/IP

- 9 -

If any components are missing, click on the **Add** button to install them. All of the protocols and clients required (listed above) are provided by Microsoft.

3. Next, highlight the specific network component you need, click Add.

4. Highlight **Microsoft**, and then double click on the item you want to add. Click **OK**.

Select Network Protocol	×
	notocol that you want to install, then click OK. If you have or this device, click Have Disk.
Manufacturers:	Network Photocols: ATM Cal Manager ATM LAN Emulation Client IRV/SRX-compatible Protocol ATM NetBEUI PPP over ATM (protocol) TCP/IP
	Have Disk
	OK Cancel

After returning to the Network screen, you can make your computer is visible on the network by enabling the **File and Print Sharing**.

5. Click the **Identification** tab. Enter a name that is unique on the network. Type the name of your workgroup, which should be the same name used by all of the other PCs on the network.

Network.
Configuration Identification Decess Control
Windows uses the following information to identify your computer on the network. Please type a name for this computer, the workgroup it will appear in, and a short description of the computer.
Computer name:

**Note** : Only one configuration utility can be active at a time. When the ZCU is set to be the active utility, opening the TI utility - by double-clicking on the utility icon in the system tray or right-clicking the icon and selecting Open - launches the ZCU inserted of the TI utility.

Configure using Windows Zero Config.	<b>External Configuration Checkbox</b> (Windows XP only): A checkbox that enables you to disable the WLAN Station Configuration Utility and indicates that the station driver is to be configured with Windows XP's built-in Zero Configuration Utility
	<ul> <li>(ZCU).</li> <li>On Windows XP systems, the ZCU service is automatically stopped when the WLAN utility is installed. The ZCU is started when you check the Configure using Windows Zero Configuration checkbox.</li> <li>The checkbox is only displayed on Windows XP systems.</li> </ul>
Profile name	The profile name that is currently connected.
SSID	The <b>SSID</b> is the unique name shared among all points in your wireless network. The name must be identical for all devices and points attempting to connect to the same network.
	<ul> <li>Indicates that the network does not require special security settings and access rights in order to connect to it (that is, you can connect to the network by setting the station's privacy mode to None and authentication mode to None.)</li> </ul>
	Indicates that the network requires special security settings and access rights in order to connect to it.
	Indicates a hidden network which is not

- 17 -

	broadcasting its SSID. The SSID for such networks are listed as <b><hidden network=""></hidden></b> . In order to connect to such a network, you must know the network's SSID.
BBS ID	The MAC address for the Access Point or station.
Current Tx Rate	It displays the currently connected rate.
Channel	The channel that is currently connected.
BSS type	The type of connection, either Access Point or Peer-to-Peer.
Tx Rate /Rx Rate	The actual instantaneous transmit and receive rates, in Mbps.
Signal quality	The signal strength from the network Access Point or station. The strength is displayed in three formats: a signal quality level (one of five levels, from Bad to Best), a numerical value in dBm, and a signal quality bar graph with a scale of $-82$ to $-10$ .

Connect	Highlight one of the devices from the list area and press the Connect button to access it.
	Prefik Configuration

	Overal 240%
	Open Advanced Mode
	<b>Profile Name :</b> Enter the profile name you wish to have.
	<b>Set Configuration :</b> The <b>Set Configuration</b> area contains the following fields
	<b>SSID Name :</b> The SSID for the current profile
	BSS Type: The BSS type, either peer-to-peer or Access
	Point
	Channel: The preferred channel on which to make a
	connection (available for peer-to-peer connections only)
L	

- 18 -

<b>Band</b> : The band on which to make a connection.
Super Profile : Determines the security settings
available to you, and can be one of the following:
<b>Personal:</b> Enables only the basic security settings that
you are likely to need at home.
Enterprise: Enables all security settings, including
more complex certificate-based settings that you may
need in an office.
Security : Determines the type of security to use for
this connection, and can be one of the following:
None
• WEP
• WPA2
<ul> <li>Any WPA</li> </ul>
<b>y</b> ··· =
<ul> <li>WEP : WEP (Wired Equivalent Privacy) is a data security mechanism based on a 64 Bit/128 Bit/256 Bit shared key algorithm.</li> <li>Press the Configure button to change WEP configuration.</li> </ul>
Note: You must use the same Default Key #, Key Size,
and <b>Encryption Key</b> on both the host and destination devices in order to establish a connection.
<b>KEY1 ~ KEY 4</b> : You can specify up to 4 different
keys, but only one can be used at a time.
<b>Encryption</b> : Enter the key value in this field.
A key of <b>10</b> hexadecimal characters (0-9, A-F) is required if a <b>64-bit Key Size</b> is selected.

- 19 -

A key of 26 hexadecimal characters (0-9, A-F) is required if a **128-bit Key Size** is selected. A key of **58** hexadecimal characters (0-9, A-F) is required if a 256-bit Key Size is selected. WPA2 & Any WPA: (WiFi Protected Access ) is more secure than WEP, and should be used if possible. Authentication Mode : Determines the type of authentication to use for this connection. With Super Profile set to Personal, this field can be one of the following: **Open** : If your access point/wireless router is using "Open " authentication, then the wireless adapter will need to be set to the same authentication type. Shared Key: Shared Key is when both the sender and the recipient share a secret key. Auto Switch: Select Auto Switch for the adapter to automatically select the appropriate **PSK**: In the **Passphrase** field, enter the key that you are sharing with the network for the WLAN connection. By default, the key that you type is masked with asterisks (\*). To view the key that you entered, check Unmask. PSK Pre-shared key Passphrase: Unmask. DK. Cancel With Super Profile set to Enterprise, this field can also be one of the following:

#### TLS

**PEAP** – **MS-CHAP-V2** (only with CCX mode enabled)

**PEAP – GTC** (only with CCX mode enabled)

- 20 -

LEAP (only with CCX mode enabled)
The <i>Personal Certificate</i> window enables you to supply a personal certificate for use with TLS and PEAP – MS-CHAP-V2 authentication. This window is only applicable with Enterprise security.
Personal Certificate :
Personal certificate       Image: Certificate         User Name:       Image: Certificate         Certificate not found.       Image: Display to the server Certificate         Validate Server Certificate       Image: DK

DKRøn	Auto		Prearble	Shot .	-
Packet Bunt:	Enable		Firmy Limits	Shut	[1]
Tarbo Node	Enable			Long	4

**Power Save Mode:** Indicates whether to use power saving. This field can be one of the following:

• None : No power save mode.

♦ Max : Max power save mode.

**TX Power Level:** The transmit power level, which can be one of the following:

- **Low Power** (6% of full power)
- Medium-Low Power (12%)
- **♦ Medium-Power** (25%)
- ♦ Medium-High Power (50%)
- ◆ **High Power** (100%)

**TX Rate:** The preferred rate of transmission, in Mbps. The options for this field are based on the selected band and channel,

**Packet Burst:** Indicates whether the Packet Bursting feature is enabled.

**Turbo Mode:** Indicates whether the 4X feature is enabled.

**Fragment Threshold:** The maximum fragment length, in bytes. The value is an even number from 256 to 4096 (default is 4096).

	RTS Threshold: The minimum packet length for sending an RTS frame, in bytes. The value must be greater than 0 (default is 4096). Preamble: Either short or long Retry limits: The number of retries to attempt, if necessary, when sending a frame. There are two Retry limits fields: Short: For frames without an RTS frame Long: For frames with an RTS frame To hide the advanced fields, click Close Advanced Mode. OK : When the configuration is done, click OK to save.
Rescan	<b>Cancel</b> : Click <b>Cancel</b> to discard changes. Searches for all available networks. Clicking on the button, the device will start to rescan and list all available sites.
Configure	Click <b>Configure</b> to modify the settings for the profiles with the SSID of the selected network. If no profile exists, the Profile Configuration window is displayed so that you can create a profile. The Profile Name field is blank If no profile exists, the Profile Configuration window is displayed so that you can modify its settings.

OK	Click $\overline{\mathbf{OK}}$ to save your settings.
Cancel	Click <b>Cancel</b> to discard changes.
Apply	Click <b>Apply</b> to save any changes to profiles and connection settings.

- 24 -

# **Profile Manager Tab**

The Profile Manager enables you to create, modify and delete the profiles that the station uses to connect to WLAN networks, to activate and de-activate profiles, and to raise and lower a profiles' priority.

All profiles are displayed in one of the following lists:

**Profiles Pool:** A list of inactive profiles, that is, profiles that cannot currently be used for making a connection.

Active Profiles: A list of active profiles, that is, profiles that can be used for making a connection.

Each profile in the **Active Profiles** list has a priority based on its location in the list. The higher in the list, the higher the profile's priority.

When the station tries to connect to a network with a specific SSID, the station first tries to connect to the network using the profile with the highest priority (that is, the profile highest in the list of active profiles) that is set to the selected SSID. If the station cannot connect using the first profile, the station tries to connect using the next-highest profile, and so forth.

Likewise, when the station loses the connection with the current network, the station tries to make a connection with any available network for which a profile exists. The station first tries to connect to a network using the profile with the highest

- 25 -

priority. If the station cannot connect using the first profile, the station tries to connect using the next-highest profile, and so forth.

To move a profile up one spot in the **Active Profiles** list, select the profile by clicking on it, and then click

To move a profile down one spot in the **Active Profiles** list, select the profile by clicking on it, and then click

New	Click <b>New</b> to create a new profile.
	The new profile is inactive and is added to the <b>Profiles Pool</b> list.
Edit	Click <b>Edit</b> to edit an exiting profile.
Delete	Click <b>Delete</b> to delete the profile that is currently selected in the Profile Manager tab. The following confirmation dialog box is displayed :
	Profile Manager         Do you really want to delete the selected profile "802.1155ID"?         Yes
ОК	Click <b>OK</b> to save any changes to profiles and connection settings, and then minimizes the utility to the Windows system tray
Cancel	Click <b>Cancel</b> to discard any changes to profiles and connection settings, and then minimizes the utility to the Windows system tray.
Apply	Click <b>Apply</b> to save any changes to profiles and connection settings.

# **Information Tab**

The **Information** tab displays information maintained by the driver, such as the number of packet errors and the total number of bytes received or transmitted. The

- 26 -

tab also displays information about the current connection, as well as network information about the station. The statistics are for the period starting when you last connected to a network. The statistics are refreshed at least twice a second.
