To Whom It May Concern::

This letter is to provide further explanation for the mobile device categorization of Intermec Technologies Corp. Model 700C. Model 700C is a penkey computer intended for business and industrial markets in data gathering applications such as warehouse inventory tracking, parcel delivery tracking etc. In its current form all SW features and hardware accessories allowing it to be used in a body- or head-worn application have been disabled. Our regulatory user documentation reflect this. However, our Technical Publication group, in anticipation of the future portable configuration of the same product, included statements and references in the User Manual, that indicate body- or head-worn use. As you see in the corrected User Manual, those statements have been removed. The product will be a true mobile application with handheld use only until a new grant application for the portable use is made supported by the appropriate SAR test reports.

If you have any questions, regarding this application, please feel free to contact me (phone: 425 356 1765, fax: 425 348 2633, email: [carl.turk@intermec.com](mailto:carl.turk@intermec.com)).  
Sincerely,

Carl K. Turk, MSEE  
Sr. EMC Engineer  
Intermec Technologies Corp.

A handwritten signature in blue ink, appearing to read 'C. Turk'.
