

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing the setup for a conducted emission test. On the left, a piece of electronic equipment, likely a spectrum analyzer or a noise meter, sits on a light-colored wooden workbench. To its right, a power supply unit is connected to a large, light-colored wooden panel. Various cables are visible, connecting the equipment to the power source and the test panel. The background is a plain, light-colored wall.
Radiation Emission Test Setup (Below 30MHz)	 A photograph of a radiation emission test chamber. The interior walls are lined with white, square-shaped electromagnetic interference (EMI) absorbers arranged in a grid pattern. In the center of the chamber, a test fixture is mounted on a rotating platform. The fixture consists of a black metal frame supporting a white, rectangular object. The floor of the chamber is also covered with absorbers. A yellow and black striped safety line is visible on the floor.
