Reliability Laboratory of Huawei Technologies Co., Ltd.

(Global Compliance and Testing Center of Huawei Technologies Co., Ltd)

No.2, New City Avenue, Songshan Lake Sci. & Tech. Industry Park, Dongguan, Guangdong, 523808, P.R.C

Tel: +86 769 23830808 Fax: +86 769 23837628

*** * Notice * ***

- The laboratory has passed the accreditation by China National Accreditation Service for Conformity Assessment (CNAS). The accreditation number is L0310.
- The laboratory has passed the accreditation by The American Association for Laboratory Accreditation (A2LA). The accreditation number is 2174.01 & 2174.02 & 2174.03
- The laboratory (Reliability Lab of Huawei Technologies Co., Ltd) is also named as "Global Compliance and Testing Center of Huawei Technologies Co., Ltd", the both names have coexisted since 2009.
- 4. The test report is invalid if not marked with the signatures of the persons responsible for preparing and approving the test report.
- 5. The test report is invalid if there is any evidence of erasure and/or falsification.
- 6. The test report is only valid for the test samples.
- 7. Content of the test report, in part or in full, cannot be used for publicity and/or promotional purposes without prior written approval from the laboratory.
- 8. If any question about this report, please contact the laboratory (PublicGCTC@huawei.com).

1.1 General Description

The HUAWEI LTE CPE B311-521 is a Long Term Evolution (LTE) wireless gateway for multiple users in household or small office environments. It enables users to access the Internet, supports 3GPP Release 9 with UE downlink/uplink category 4. Working band: LTE: B2/B4/B5/B7/B66, UMTS: B2/B4/B5, Wi-Fi: 2.4 GHz 802.11b/g/n 2x2 MIMO up to 300Mbps. Maximum Users: 32

| Relative Humidity | 30% – 70% |

7 RF Exposure Requirements

An estimation of MPE in this application for product is used to ensure if it complies with the rules of the standard in the regulation list above.

Maximum permissible exposure (MPE) refers to the RF energy that is acceptable for human exposure. It is broken down into two categories, Occupational/controlled and General population/uncontrolled.

Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.

General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.

A rough estimation of the expected exposure in power flux density on a given point can be made with the following equation:

$$S = \frac{P \times G}{4 \times \pi \times R^2}$$

Where:

S = power density

P = power input to the antenna

G = numeric gain of the antenna in the direction of interest relative to an isotropic radiator

R= distance to the centre of radiation of the antenna

EIRP = P*G

The antenna of the product, under normal use condition is at least 20 cm away from the

body of the user. Warning statement to the user for keeping at least 20cm separation distance and the prohibition of operating to a person has been printed on the user's manual. Therefore, the S of the device is calculated with R=20cm, and if it is below the limit S, then we can conclude the device complies with the rules.

7.1 FCC MPE Limits

We analysis if it comply with the limits for General population/uncontrolled exposure. The FCC MPE limits for field strength and power density are given in 47CFR 1.1310(Table below). These limits are generally based on recommended exposure guidelines published by the National Council on Radiation Protection and Measurements (NCRP), and also partly based on guidelines recommended by the American National Standards Institute (ANSI) in Section 4.1 of ANSI/IEEE C95.1.

Table: Limits for Maximum Permissible Exposure (MPE)

| p / | | | | | | |
|---|---|------------------|--------------------------|-------------------------------|--|--|
| (A) Limits for Occupational/controlled Exposure | | | | | | |
| Fraguency: | Floatria Field | Magnetic Field | Power | Averaging Time | | |
| Frequency | Electric Field | Magnetic Field | Density | (minute) $ E ^2$, $ H ^2$ or | | |
| Range(MHz) | Strength(E)(V/m) | Strength(H)(A/m) | (S)(mW/cm ²) | S | | |
| 0.3-3.0 | 614 | 1.63 | (100)* | 6 | | |
| 3.0-30 | 1842/f | 4.89/f | (900/f ²)* | 6 | | |
| 30-300 | 61.4 | 0.163 | 1.0 | 6 | | |
| 300-1500 | | | f/300 | 6 | | |
| 1500-100,000 | | | 5 | 6 | | |
| (| (B) Limits for General Population/uncontrolled Exposure | | | | | |
| Frequency | Electric Field | Magnetic Field | Power | Averaging Time | | |
| | | • | Density | (minute) $ E ^2$, $ H ^2$ or | | |
| Range(MHz) | Strength(E)(V/m) | Strength(H)(A/m) | (S)(mW/cm ²) | S | | |

| UMTS Band IV | External Antenna 2 | 24.5 | 3.00 | 27.5 | 562.3 | 20 | 0.112 | 1.000 | 11.19% |
| UMTS Band V | Internal Antenna 1 | 25.0 | 1.80 | 26.8 | 478.6 | 20 | 0.095 | 0.549 | 17.35% |
| UMTS Band V | External Antenna 1 | 25.0 | 1.00 | 26.0 | 398.1 | 20 | 0.079 | 0.549 | 14.43% |
| UMTS Band V | External Antenna 2 | 25.0 | 3.00 | 28.0 | 631.0 | 20 | 0.126 | 0.549 | 22.88% |
| LTE Band 2 | Internal Antenna 1 | 24.0 | 1.10 | 25.1 | 323.6 | 20 | 0.064 | 1.000 | 6.44% |
| LTE Band 2 | External Antenna 1 | 24.0 | 1.00 | 25.0 | 316.2 | 20 | 0.063 | 1.000 | 6.29% |
| LTE Band 2 | External Antenna 2 | 24.0 | 3.00 | 27.0 | 501.2 | 20 | 0.100 | 1.000 | 9.98% |
| LTE Band 4 | Internal Antenna 1 | 24.0 | 0.30 | 24.3 | 269.2 | 20 | 0.054 | 1.000 | 5.36% |
| LTE Band 4 | External Antenna 1 | 24.0 | 1.00 | 25.0 | 316.2 | 20 | 0.063 | 1.000 | 6.29% |
| LTE Band 4 | External Antenna 2 | 24.0 | 3.00 | 27.0 | 501.2 | 20 | 0.100 | 1.000 | 9.98% |
| LTE Band 5 | Internal Antenna 1 | 24.0 | 1.80 | 25.8 | 380.2 | 20 | 0.076 | 0.549 | 13.78% |
| LTE Band 5 | External Antenna 1 | 24.0 | 1.00 | 25.0 | 316.2 | 20 | 0.063 | 0.549 | 11.47% |
| LTE Band 5 | External Antenna 2 | 24.0 | 3.00 | 27.0 | 501.2 | 20 | 0.100 | 0.549 | 18.17% |
| LTE Band 7 | Internal Antenna 1 | 24.5 | 1.60 | 26.1 | 407.4 | 20 | 0.081 | 1.000 | 8.11% |
| LTE Band 7 | External Antenna 1 | 24.5 | 1.00 | 25.5 | 354.8 | 20 | 0.071 | 1.000 | 7.06% |
| LTE Band 7 | External Antenna 2 | 24.5 | 3.00 | 27.5 | 562.3 | 20 | 0.112 | 1.000 | 11.19% |
| LTE Band 66 | Internal Antenna 1 | 24.5 | 0.30 | 24.8 | 302.0 | 20 | 0.060 | 1.000 | 6.01% |
| LTE Band 66 | External Antenna 1 | 24.5 | 1.00 | 25.5 | 354.8 | 20 | 0.071 | 1.000 | 7.06% |
| LTE Band 66 | External Antenna 2 | 24.5 | 3.00 | 27.5 | 562.3 | 20 | 0.112 | 1.000 | 11.19% |
| WiFi 2.4G | Internal Antenna 2 | 20.5 | 4.17 | 24.7 | 293.1 | 20 | 0.058 | 1.000 | 5.83% |
| WiFi 2.4G | Internal Antenna 3 | 17.5 | 3.40 | 20.9 | 123.0 | 20 | 0.024 | 1.000 | 2.45% |

Note:

According to the power density calculations with a distance from the point to the antenna 20cm above, all values meet the limit specified in section 7, so it is into compliance.

^{1)*} based on the maximum tune-up tolerance limit declared by manufacturer

9 Exposure calculations for multiple sources

When a number of sources at different frequencies, and/or broadband sources, contribute to the total exposure, it becomes necessary to weigh each contribution relative to the MPE in accordance with the provisions of Table (A) and Table (B). To comply with the MPE, the fraction of the MPE in terms of E^2 , H^2 (or power density) incurred within each frequency interval should be determined and the sum of all such fractions should not exceed unity.

In order to ensure compliance with the MPE for a controlled environment, the sum of the ratios of the power density to the corresponding MPE should not exceed unity. That is

$$\sum_{i=1}^{n} \frac{S_i}{MPE_i} \le 1$$

The product also has multiple transmitters The Simultaneous Transmission Possibilities are as below:

| Simultaneous Tx Combination | Configuration |
|------------------------------|---------------------|
| 1 | WiFi 2.4G MIMO |
| 2 | UMTS/LTE +WiFi 2.4G |

9.1 Calculation of WiFi MIMO Transmitters

| Mode | Antenna | Tune-up Power (dBm) | Gain (dBi) | EIRP (dBm) | EIRP (mW) | R (cm) | S (mW/cm2) | Limit (mW/cm2) | % of limit |
|------|------------|---------------------------|---------------|---------------|--------------|-----------|---------------|-------------------|---------------|
| WiFi | Internal | 19.5 | 1.24 | 20.7 | 118.6 | 20 | 0.024 | 1.000 | 2.36% |
| 2.4G | Antenna 2 | | | | | | | | |
| 2*2 | & Internal | | | | | | | | |
| MIMO | Antenna 3 | | | | | | | | |

9.2 Estimation of Co-located Transmitters

| NO. | Simultaneous Conditions | Max. PD Mode/Band | % of limit | Total exposure ratio (<1) | |
|-----|-------------------------|--------------------------------|------------|---------------------------------|--|
| 1 | UMTS/LTE +WiFi 2.4G | UMTS Band V External Antenna 2 | 22.88% | 28.71% | |
| | UIVITO/LTE +VVIFT 2.4G | WiFi 2.4G Internal Antenna 2 | 5.83% | 20.7170 | |

According to the Table above, we can conclude that the calculation results of all simultaneous transmission possibilities are less than 100%, so it is into compliance. Therefore the product also meets the requirements under multiple sources condition.

END
