Subject: FCC ID: SWW2112P

Mr. Ross:

In order for processing of this application (FCC ID: SWW2112P) to continue, the following issue(s) will have to be addressed:

1) Notwithstanding the fact that the device does not begin to charge its batteries until 45 seconds after being placed on the charger, were investigations made to determine the radiated and conducted emission levels of the intentional radiator when transmitting while connected to the charger, but not charging?

The item(s) indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 60 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Please upload responses and/or exhibits to the electronic filing website. Your correspondence number is SWW2112P-3.

Correspondence by Project

Project Number:

770071777

Correspondence Number	Memo
SWW2112P-1	1. The device uses FSK modulation. 2. The pagers do not charge until 45 seconds after being placed on the charger. The information that is sent to the base unit, is sent in this time and stops before charging starts. 3. The report has been uploaded in two sections, both less than 4 MB in size.
Correspondence Number	Memo
SWW2112P-3	1) The EUT has been investigated and tested for emissions while transmitting and receiving while being placed on the charging board. The Test report has been revised to include this data. Also, the configuration has been revised to reflect that the EUT transmits and receives while being on the charging board. Please see the exhibits for the revised test report.
