1. FCC 90.203 seems to require additional narrower channel BW's in order to comply with the narrowbanding requirements. This device has only 12.5 kHz Channel BW (11K0F3E) and 25KHz Channel BW (16K0F3E). Please specifically indicate and justify the section of FCC 90.203 (j) for which compliance to the FCC narrowbanding requirements are met.

CT – CT – As per KDB 579009, we are allowed to proceed with the Class 2 Permissive change without the 6.25kHz BW and without the 25KHz BW.
