

FUNCTIONAL DESCRIPTION

The 5804BD-MX is identical in function to the 5804BD (CFS8DL5804BD), it is a Bi-directional communicator giving a remote status of the alarm system, and allows arming and disarming and the sending of panic messages, nor is it supervised. In-fact it will be sold as the 5804BD. The only difference is that a new single chip receiver chip has replaced the previous single chip receiver that has just gone obsolete.
