

Remote control line description

1 . system power: 3.0V

2. press: FORWARD, BACKWARD, RIGHTWARD, LEFTWARD, respectively control, forward, backward, left turn, right turn. The remote control coding signal produced by TX-2 consists of 945, L3 and crystal oscillator, which emits 27.145 MHz oscillation frequency, modulate, amplifies and transmits the carrier wave, and transmits and receives by the transmitting circuit and the antenna.
