When operating in Wi-Fi Direct mode on these non-DFS U-NII bands, it may operate as a peer-to-peer(P2P) client device or group owner (GO) to establish a P2P network if, and only if, a master device is present and network communication is maintained between a master device and the GO.

This information when programmed into the EEPROM will not be accessible and can not be changed by the end user. If you have any questions, please do not hesitate to contact us.
