

Product Operation Description of HT03

This product HT03 is wireless multimedia keyboard, which has 104/105 standard keys and some multimedia keys such as Home, Search, Favorites, etc. It uses two AA batteries. There is a low-power LED indicator on the keyboard. When the batteries are low, the LED will flash. Please change new battery for the Keyboard.

The main function of HT03 is modulating pressing keys message and transmitting RF signal to associated receiver. HT03 has one working channel, and the operation frequency range is 26.96 to 27.28MHz.

The “CONNECT” key on HT03 is used to setup of the wireless link between the keyboard and its receiver at first time of use or while changing the battery.

While the “CONNECT” key of the receiver is pressed, the indicator on the receiver will light on and the receiver is successfully prepared for connection.

Then press “CONNECT” key of HT03, the Receiver connection indicator light goes off, the Keyboard is working.

To setup the connection between the Keypad and the receiver, place the receiver at least 20cm (8 inches) away from other electronics devices, such as monitor and external storage drives.
