

Operational Descriptions

This device is a 2.4GHz Wireless Router with ADSL, which operates in the 2.4GHz frequency spectrum with throughput of up to 54Mbps using OFDM technique. If the signal to noise ratio is too poor that 54Mbps could not be supported, the 11Mbps data rate with DSSS technique will be applied.

External power adapter powers the transmitter of the EUT. The antenna is an Omni-Directional antenna that is secured to the EUT Enclosure by snap fit. Under normal conditions, the user has to keep at least 20cm of separation distance between radiator and the body of the user.

For other detailed instructions, please refer to the user's manual.
