RE: FCC ID: QMNRM-59_ATCB002724

Attention: Louis Le / Elizabeth Parish

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please provide the manual with the appropriate HAC user information.
2. Please note that C63.19 does not address simultaneous transmission of two or more transmitters. Please provide information on how the BT device is addressed in this HAC application (i.e. information to the user in the manual etc).
3. FYI - Please note that the FCC training states that for TCB certification the measurement uncertainty is to be 2dB or under. Please note that this 2dB is also apparently related to the examples given in C63.19. It should be noted that your uncertainty budget has considerably more than the example in C63.19. Please note that for E-field you list an uncertainty of 33.2% or approximately 3.5dB. Please note that your uncertainty budget, while very conservative compared to that of the example in C63.19, is in excess of 2dB. There may be subsequent questions from the FCC.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
