# **EXHIBIT C - RF EXPOSURE EVALUATION**

# **Applicable Standard**

According to §15.407(f) and §1.1310, systems operating under the provisions of this section shall be operated in a manner that ensure that the public is not exposed to radio frequency energy level in excess of the Commission's guideline.

Report No.: 2502R24398E-RF-00D

According to KDB447498 D01 General RF Exposure Guidance v06:

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq$  50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)]  $\cdot$  [ $\sqrt{f(GHz)}$ ]  $\leq$  3.0 for 1-g SAR and  $\leq$  7.5 for 10-g extremity SAR, where

- f(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison
- 3.0 and 7.5 are referred to as the numeric thresholds in the step 2 below

The test exclusions are applicable only when the minimum test separation distance is  $\leq$  50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is  $\leq$  5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

### **Measurement Result**

#### For 5150-5250MHz:

The max conducted power including tune-up tolerance is 8.1dBm (6.46 mW). [(max. power of channel, mW)/(min. test separation distance, mm)][ $\sqrt{f(GHz)}$ ] =6.46/5\*( $\sqrt{5.24}$ ) = 2.96< 3.0

### For 5250-5350MHz:

The max conducted power including tune-up tolerance is 8.1dBm (6.46 mW). [(max. power of channel, mW)/(min. test separation distance, mm)][ $\sqrt{f(GHz)}$ ] =6.46/5\*( $\sqrt{5.32}$ ) = 2.98< 3.0

### For 5470-5725MHz:

The max conducted power including tune-up tolerance is 7.9dBm (6.17 mW). [(max. power of channel, mW)/(min. test separation distance, mm)][ $\sqrt{f(GHz)}$ ] =6.17/5\*( $\sqrt{5}$ .70) = 2.94< 3.0

## For 5725-5850MHz:

The max conducted power including tune-up tolerance is 7.9dBm (6.17 mW). [(max. power of channel, mW)/(min. test separation distance, mm)][ $\sqrt{f(GHz)}$ ] =6.17/5\*( $\sqrt{5.825}$ ) = 2.98< 3.0

Note: the max conducted power including tune-up tolerance was declared by manufacturer.

Result: Compliant. The stand-alone SAR evaluation is not necessary.
