Subject: Industry File Review – Status of Products with Respect to New Requirements in the Standard for Safety for Appliance Wiring Material, UL758 Review ID# 758-2014-013

On June 17, 2016, UL announced an Industry File Review for the Subject Number and Effective Date noted below. New requirements have been developed that may be applicable to your product(s).

SUBJECT NUMBER: 758 **EFFECTIVE DATE:** December 8, 2016

This letter is intended to supplement the Action Required/Announcement Letter dated June 17, 2016 and provide additional guidance for clients manufacturing products under CCN AVL2 “Appliance Wiring Material – Component” and CCN AVL3 “Appliance Wiring Material- Unlisted Component”

Requirements for production line testing performed by the Manufacturer have been revised. There are three new items in UL 758 that require your attention prior to the Effective Date of December 8, 2016;

- **Appliance wiring material constructed of laminated film insulating material with uninsulated intervals (Section 48.2):** The production line tests on laminated flat constructions of AWM with a purposeful gap in the insulation have been defined. All AWM of this construction must be tested using one of the three methods described in either 48.2.1, 48A, or in the Section General of the individual manufacturer's Follow-Up Services Procedure.
- **Section 48.2.1** now allows for use of a DC spark tester in lieu of an AC spark tester
- **Production-Line Dielectric Test (section 49):** A DC dielectric tester may be used in lieu of an AC dielectric tester for the production-line testing of shielded cords.

UL Field Representatives will review the required test methods employed at the manufacturing site during their routine inspection visits to verify compliance. Any non-compliance with these requirements after the Effective Date will be identified on a “Held Shipment” Variation Notice (VN). Therefore, please ensure that the required production line test equipment and test methods are in place before the Effective Date.

As stated in the Industry File Review Important Letter, Recognition Coverage on your products will cease and you cannot use the UL Mark unless those products comply with the new requirements on or before December 8, 2016

Should your products be covered in a Multiple Listing (ML), Multiple Recognition or Multiple Classification agreement, or you have an Alternate Listee (AL) arrangement with another company, it is suggested that the company(s) be advised of the status of your products as their Recognition Coverage along with the authorization to use the UL Mark will also cease if your products do not comply with the new and revised requirements on or before the Effective Date.

Any information and documentation involving UL Mark Services are provided on behalf of UL LLC (UL) or any authorized licensee of UL.

We appreciate your participation in UL's Certification Program and your continued cooperation with UL's Industry File Review Process.

VERY TRULY YOURS,

4. FIRST-AID MEASURES

INGESTION	: Help to vomit as much as possible. If sick feeling continues, and ask a physician for advice.
INHALATION	: When a gas generated from the molten polymer, especially fume generated during combustion or heat, has been inhaled, remove fresh air without delay and wait until the victim is recovered. If sick feeling continues, ask a physician for advice.
SKIN CONTACT	: Cool the contacted skin with clean water without delay, if a contact with the polymer in a molten form. Do not force to remove the solid resin on the skin. If any burns are observed on the skin, ask a physician for advice.
EYE CONTACT	: Cool and rinse the eye with clean water for at least 15 minutes when the eyes had contact with molten polymer. In case of wearing contact lenses, remove the lenses as soon as possible, and ask a physician for advice. When the eye had contact with the polymer in an ordinary solid form, rinse the eye with clean water without delay. If the discomfort persists, ask a physician for advice.

5. FIRE-FIGHTING MEASURES

EXTINGUISHING MEDIA	: Water, foam fire-extinguishing agent, powder fire-extinguishing agent, and carbon dioxide gas.
SPECIFIC METHODS	: Extinguish the fire with water. A method of extinguishing an ordinary fire may be applied. Do not apply water directly to processing machines.
SPECIFIC HAZARDS	: Incomplete combustion leads to generation of toxic gases such as carbon monoxide or tetrahydrofuran, in addition to carbonic acid gas and water.
SPECIAL EQUIPMENT FOR THE PROTECTION OF FIREFIGHTERS	: In case the fire gained force, use a gas mask or other protective equipment.

6. ACCIDENTAL LEAKAGE MEASURES

PERSONAL PRECAUTIONS	: When pellets were spilled on the road or floor, wipe them off with a broom or cleaner not to cause slipping.
ENVIRONMENTAL PRECAUTION	: Handle the spillage in accordance with provisions given in the "Resin pellet spillage preventive manual", in order to prevent intakes by marine animals and birds.

7. HANDLING AND STORAGE

HANDLING	: This resin in a pellet form will neither ignite nor explode at room temperatures.
HANDLING 2	: For molding work, effective means for local exhaust are required to discharge gases generated by melt processing.
HANDLING 3	: Avoid inhaling of gases generated in moulding work. Do not directly touch resin of high temperature.
HANDLING 4	: Avoid retaining hot resin in the processing machines for many hours.
HANDLING 5	: This pellets spilled on the floor are likely to cause slipping. Remove such spillage at any times.

HANDLING 6	: Glass fibers are not generally exposed in a single substance under normal processing and handling conditions as they are compounded in pellets. However, the following measures will be necessary to minimize the exposure to glass fibers or dusts containing glass fibers, when pellets or molded parts containing glass fibers are cut, ground or burnt, depending on environmental and operational conditions. • Those who are sensitive in skin to glass fiber should wear suitable (protective) clothes to minimize the exposure of their skin. • Wash working clothes apart from other laundry, so that the latter will not cause contamination with glass fibers. • Provide the workshop with partitions to prevent diffusion of glass fiber dusts. • Pay precautions not to rub face, neck or arms with hands. Wash hands and gargle after working without fail. • Keep dust sources totally enclosed. • Provide local air exhausters and implement periodical inspections and adjustments at least once a year. • Reduce cutting and grinding processes to the possible minimum, and devise working procedures to minimize dust generation. • Provide dust-preventive masks, protective glasses and gloves for personal hygiene. • Determine the operational environment at indoor working places and confirm the effects of environmental improvement. Note) Glass fibers are, like road dusts, told to be least hazardous to human bodies, but proper measures are required to avoid useless inhaling.
STORAGE	: Keep the substance away from any fire or heat sources for the sake of safe storage.
RECOMMENDED PACKAGING MATERIALS	: No information.

8. EXPOSURE CONTROL / PERSONAL PROTECTION

CONTROL CONCENTRATION	: None at present
PERMISSIBLE CONCENTRATION	: OSHA PEL/1985 Max. permissible concentration of inactive powder 15mg/m ³ – ditto – (Aspiration) 5 mg/m ³ ACGIH TLV/1992 1993 Exposure limit of the powder TWA 10 mg/m ³
ENGINEERING MEASURE	: When handling dust: Use totally enclosed containers resisting dust explosion. When heat melted in molding: Effective local ventilation must be provided.
PERSONAL PROTECTIVE EQUIPMENT	:
RESPIRATORY PROTECTION	: Wear a dust-proof mask.
EYE PROTECTION	: Wear protective glasses or goggles.
HAND PROTECTION	: Wear heat-resisting gloves against burns, when handling molten polymer.
SKIN & BODY PROTECTION	: Wear long sleeve clothes against burns, when handling molten polymer.

2 <Effects on Human Bodies>

(1) Effects on skin

Stimulation to the skin with glass fibers may be caused when glass fibers diameter is larger than $4.5 \sim 5 \mu\text{m}$. They give mechanical stimulation followed by itchiness to the skin, but further continuous exposure reportedly results in extinction of stimulation. It may sometimes leads to irritable dermatitis complicated with urticaria or eczema-like reaction. It is, however reported that such dermatitis is not so serious in general and does not last too long. Therefore, skin stimulation can be prevented by proper use of glass fibers.

(2) Effects on Tumor

Investigations made on glass fibers till today reveal that there is neither increase in mortality of glass fiber production workers due to lung cancer or mesothelioma nor such cases reported.

<Animal Test Report>

It is suggested that carcinogenicity of mineral fibers is dependent on their shapes rather than on their constituents. According to a report on experiments using 17 kinds of artificial mineral fibers in various sizes prepared by Dr.Stanton of National Cancer Institute, in USA, statistical studies on correlations between the diameter and length of fibers and the coincidence of mesothelioma have revealed that mineral fibers having a diameter smaller than $0.25 \mu\text{m}$ and a length larger than $8 \mu\text{m}$ are closely related to the coincidence of cancers. Since these experiments were performed by artificially dosing the subject animals with a large quantity of glass fibers and consequently they are quite different from the actual exposures to human bodies, it is told to be problematic to make a conclusion that mineral fibers are hazardous to human health, basing on the results obtained from these experiments. Upto the present time, there is no result obtainable to demonstrate a mechanism of glass fibers causing lung cancers in spite of experiment by long exposure to glass fibers with high concentration.

OTHER CAUTIONS : Toxicological information of Carbon black which is an ingredient is shown below. Toxicity of the ingredient does not appear as product for pellet. When dust is generated by cutting and sanding, toxicity appears. Avoid breathing dust and avoid generating dust.
