

MEMORANDUM FOR CONSIDERATION

TO: FCC REVIEWING ENGINEER

FROM: JIM HAYNES

SUBJECT: FREQUENCY RANGES AND CELLULAR WARNING LABEL

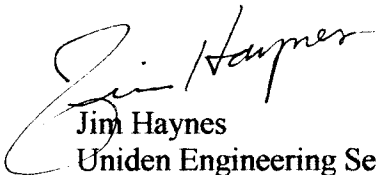

FCC ID: AMWUB299

Please note that the Frequency Range(s) entered under the Equipment Specifications are duplicates of our original application submission. However, in reviewing the Grant of Equipment Authorization (issued March 19, 1999) it appears that the frequencies below 29 MHz were omitted from the Grant. Possibly, this was deleted from the original grant due to the fact that the frequencies between .52 MHz and 1.72 MHz are considered the standard AM broadcast band and not subject to this type of Equipment Authorization. Therefore, when comparing the Frequency Range(s) of this application against the FCC's database, they may not completely agree.

Additionally, the Cellular Modification Warning Label mandated pursuant to new Part 15.121(f)(1) is not an "ID Label" but we could not find a more suitable exhibit heading to upload this drawing. Therefore, the label is being uploaded under the Exhibit Type as an "ID Label & Location Info".

Please contact the undersigned if you need any further clarification on this matter.

Regards,

Jim Haynes
