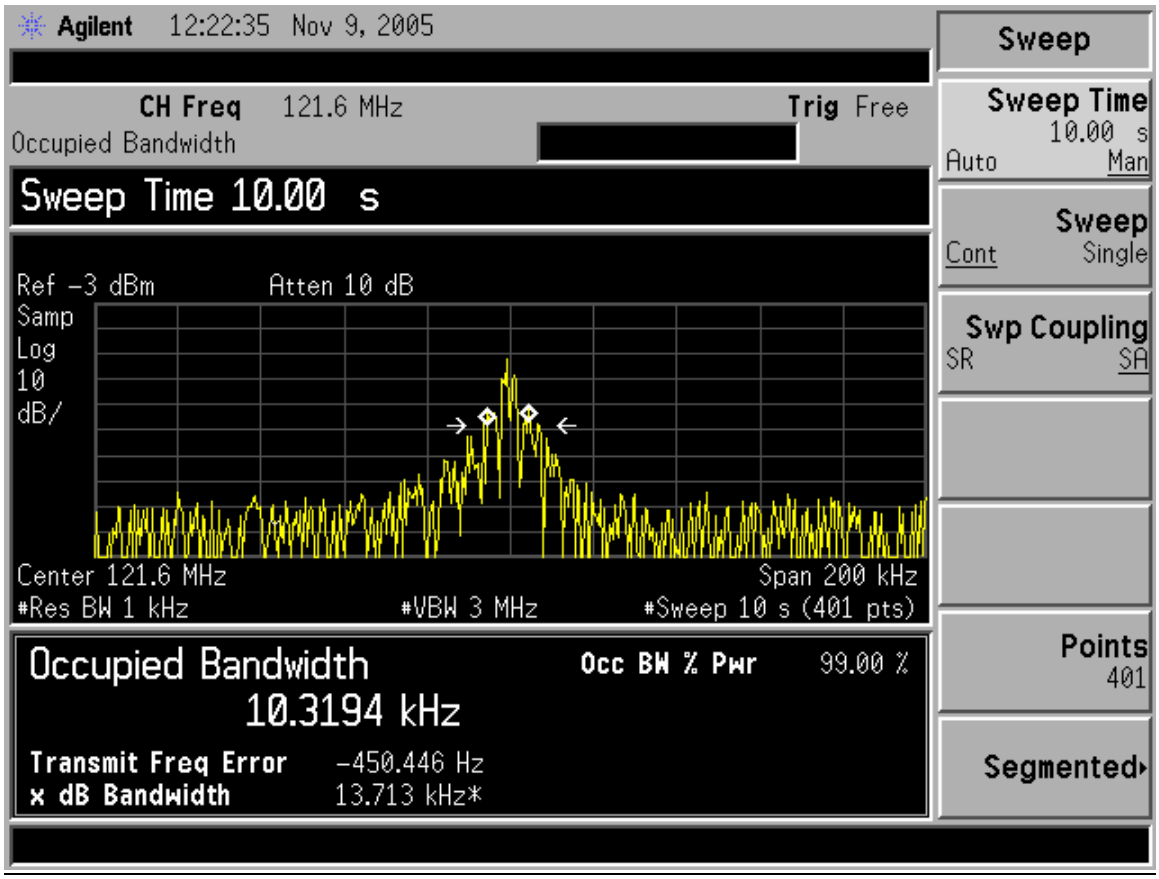
121.5MHz FCC TESTING
TO 47 CFR CH.1 (10-1-00 EDITION) PART 80.1053

1. Occupied Bandwidth test. (Limits <25KHz)

Plot 1 shows the occupied bandwidth for SMARTFIND EPIRB. The carrier is Amplitude Modulated in the form of a square wave, being swept up from 300Hz to 1300Hz.

Plot 1



2. Modulation Duty Cycle (Limits 33%-55%)

Plot 3

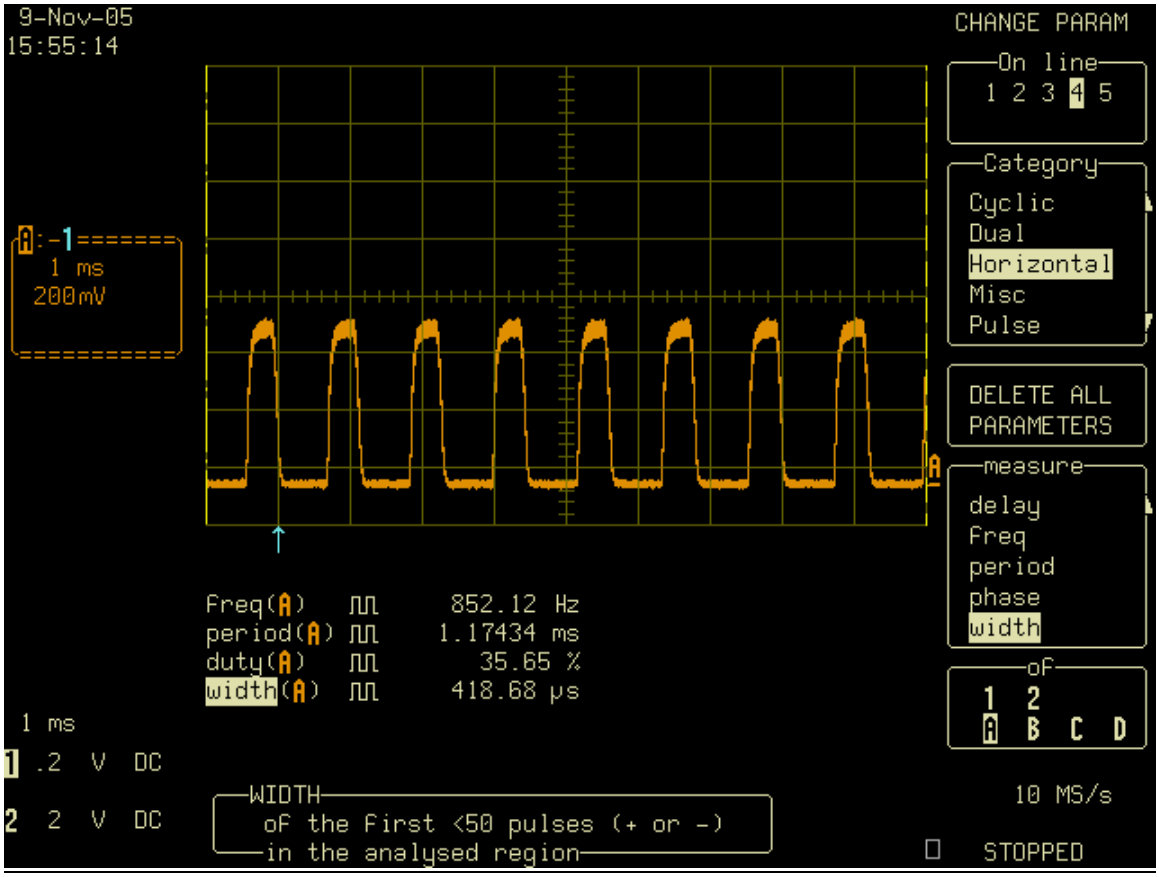
Plot 5



Plots 3 to 5 show the Modulation duty-cycles for the upper, lower and centre swept limits for the Smartfind+.

Lower 340Hz = **34.7%**

Centre 852Hz = **35.65%**

Upper 1.25KHz = **37.5%**

Measurement of Audio frequencies

F_{low} = **340Hz**
F_{high} = **1250Hz**

F_{range} = 1250Hz - 340Hz = **910Hz**

3. **Modulation Factor (Limits <1)**

The modulation factor for the Smartfind+

$$M = \frac{V\max - V\min}{V\max + V\min}$$

$$M = \frac{554mV - 19mV}{554mV + 19mV} = \mathbf{0.933}$$

Sweep Repetition rate **= 3Hz**

4. Signal Enhancement Test (Limits >30% Power in 30Hz)

$$\frac{carrierpower}{totalpower} = \log 10 - 1 \quad \left[\frac{dBc - dBt}{10} \right]$$

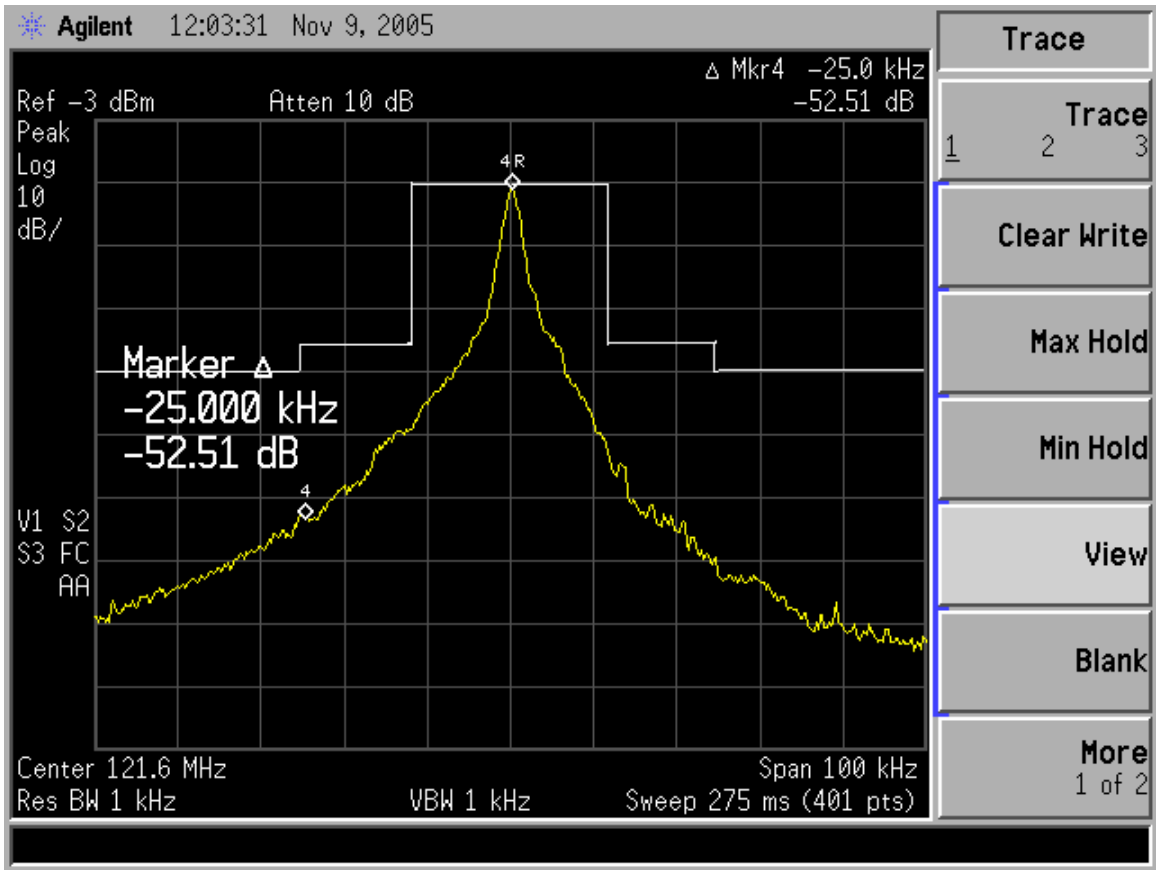
Smartfind+

dBt = -6.00dB + 10Log 0.36 = -10.44dB
dBc = -13.38dB

$$\%Power = Log10\text{-}1 \times \frac{-13.38 - (-10.44)}{10} = \mathbf{50.78\%}$$

5. Emission limitation (Limits : ±12.5KHz >25dBc & ±25KHz >30dBc)

Plot 7



Plot 7 shows the emission mask for the SMARTFIND EPIRB.

-25Khz	-12.5KHz	+12.5KHz	+25KHz
-52.5dBc	**-37.46dBc**	**42.57dBc**	**59.52dBc**
