Re: Audit of G8JHHI01 Equipment Authorization

This letter and the attached drawings constitute our response to the FCC's Audit of our Handheld Interrogator modular radio product, ID# G8JHHI01, in which we demonstrate our commitment to comply with the Commission's rules. We now submit our response via Rheintech and American TCB.

On the 11th of January, 2006, Tim Harrington of the Commission's Equipment Authorization Branch requested that AMCOAS demonstrate compliance with labeling requirements of 47 CFR 2.925(d). The correspondence Tim referenced concerned an equipment authorization grant label on the outside of the handheld computer (hereinafter: host device) that contains our modular radio card. We put a grantee label on the modular radio card itself, and intended to put one on the outside of the host device, but the photos in our final test report do not show the label on the outside of the host device. We regret the oversight.

To rectify the situation, AMCOAS has modified our assembly drawings to show a grantee code label on the outside of the host device. A grantee code label will be applied to the host device by AMCOAS at the time the modular radio device is installed in the host device. We will send grantee labels with instructions to our customers for the 28 units we have in the field, and retrofit grantee labels on units that come to AMCOAS for repair.

Attached to this letter is an AMCOAS released drawing showing the details of the label. Also attached is another drawing showing the assembly of the modular radio into the host device, including placement of the grantee code label.

Sincerely,

Steve Bragg
