Subject: Urgent – Respond ASAP

1Q) user manual page 8 says PTT function not available; SAR report has data for PTT mode – please explain and/or revise manual and/or SAR exhibits.

1A) The QSec2700 phone has all the necessary hardware for PTT operation. The software for PTT operation is currently not available. The QSec2700 phone was developed for a government contract that has a life-cycle of approximately 5 years. When the PTT software is available, the phone will be used in that operational mode also. The SAR PTT data was taken to ensure compliance to the SAR standards. Test software was used to control the QSec2700 phone while the SAR PTT measurements were performed.

2Q) FYI in future filings SAR DAE cal info does not need to be submitted.

3Q) Exhibits titled “SAR part 7” and “SAR part 8” are duplicate probe cal exhibits – probably one of these was intended to be 835 (900) MHz dipole cal. cert. – please submit.

3A) The 835 (900) MHz dipole cal. cert. has been attached.

4Q) Submit the internal photos with the shielding removed.

4A) Additional internal photos with the shielding removed have been attached.

Thank-you for reviewing this material,

Robert Scodellaro
