

Integrated Transceiver Modules for WLAN 802.11 a/b/g/n, Bluetooth, Bluetooth Low Energy (BLE), and ANT

FEATURES

- IEEE 802.11 a,b,g,n,d,e,l compliant
- Typical WLAN Transmit Power:
 - o 18.3 dBm, 11 Mbps, CCK (b)
 - o 14.4 dBm, 54 Mbps, OFDM (g)
 - o 12.5 dBm, 65 Mbps, OFDM (n)
- Typical WLAN Sensitivity:
 - o -88 dBm, 8% PER, 11 Mbps
 - o -74 dBm, 10% PER, 54 Mbps
 - o -72 dBm, 10% PER, 65 Mbps
- Bluetooth 2.1+EDR, Power Class 1.5
- Full support for BLE 4.0 and ANT
- Miniature footprint: 18 mm x 13 mm
- Low height profile: 1.9 mm
- Terminal for PCB/Chip antenna feeds
- Worldwide acceptance: FCC (USA), IC (Canada), and CE (Europe)
- Modular certification allows reuse of LSR FCC ID and ETSI certification without repeating the expensive testing on your end product
- Compact design based on Texas Instruments WL1273L Transceiver
- Seamless integration with TI OMAP™ application processors
- SDIO Host data path interfaces
- Bluetooth Advanced Audio Interfaces
- Low power operation modes
- RoHS compliant
- Streamlined development with LSR Design Services

APPLICATIONS

- Security
- HVAC Control, Smart Energy
- Sensor Networks
- Medical

DESCRIPTION

The TiWi5 module is a high performance 2.4 /5.5 GHz IEEE 802.11 a/b/g/n, Bluetooth 2.1+EDR, and Bluetooth Low Energy (BLE) 4.0 radio in a cost effective, pre-certified footprint.

The module realizes the necessary PHY/MAC layers to support WLAN applications in conjunction with a host processor over a SDIO interface.

The module also provides a Bluetooth platform through the UART or btSPI HCI transport layer. Both WLAN and Bluetooth share the same antenna port.

TiWi5 is pin for pin compatible with the TiWi-R2 and TiWi-BLE modules. TiWi5 does not include the on module U.FL connector.

Need to get to market quickly? Not an expert in 802.11 or Bluetooth? Need a custom antenna? Would you like to own the design? Would you like a custom design? Not quite sure what you need? Do you need help with your host board? LS Research Design Services will be happy to develop custom hardware or software, integrate the design, or license the design so you can manufacture yourself. Contact us at sales@lsr.com or call us at 262-375-4400.

ORDERING INFORMATION

Order Number	Description
450-0053	TiWi5 Module (Tray, SPQ = 100)
450-0053R	TiWi5 Module (Tape and Reel, SPQ = 1000)

Table 1 Orderable TiWi5 Part Numbers

MODULE ACCESSORIES

	Order Number	Description
	001-0009	2.4/5.5 GHz Dual-Band Dipole Antenna with Reverse Polarity SMA Connector
	080-0001	U.FL to Reverse Polarity SMA Bulkhead Cable 105mm

TIWi5 MODULE FOOTPRINT AND PIN DEFINITIONS

To apply the TiWi5 module, it is important to use the module pins in your application as they are designated in below and in the corresponding pin definition table found on pages 7 and 8. Not all the pins on the TiWi5 module may be used, as some are reserved for future functionality.

Figure 2 TiWi5 Pinout (Top View)

PIN DESCRIPTIONS

Module Pin	Name	I/O Type	Buffer Type	Logic Level	Description
1	VBAT	PI	-	-	Battery Voltage 3.6 VDC Nominal (3.0-4.8 VDC)
2	BT_FUNC5	DO	4 mA	1.8 VDC	HOST_WU (*)
3	WL_UART_DBG	DIO	4 mA	1.8 VDC	WL_UART_DBG
4	WLAN_IRQ	DO	4 mA	1.8 VDC	WLAN Interrupt Request
5	BT_EN	DI	-	1.8 VDC	Bluetooth Enable
6	FM_EN	DI	-	1.8 VDC	NOT SUPPORTED, CONNECT TO GND
7	WL_RS232_RX	DI	-	1.8 VDC	WLAN TEST UART RX (*)
8	WL_RS232_TX	DO	4 mA	1.8 VDC	WLAN TEST UART TX (*)
9	FM_I2S_FSYNC	DO	4 mA	1.8 VDC	NOT SUPPORTED, NO CONNECT
10	WL_EN	DI	-	1.8 VDC	WLAN Enable
11	VIO	PI	-	-	POWER SUPPLY FOR 1.8 VDC DIGITAL DOMAIN
12	GND	GND	-	-	Ground
13	SDIO_D3	DIO	8 mA	1.8 VDC	SDIO INTERFACE, HOST PULL UP
14	SDIO_D2	DIO	8 mA	1.8 VDC	SDIO INTERFACE, HOST PULL UP
15	SDIO_D1	DIO	8 mA	1.8 VDC	SDIO INTERFACE, HOST PULL UP
16	SDIO_D0	DIO	8 mA	1.8 VDC	SDIO INTERFACE, HOST PULL UP
17	SDIO_CMD	DIO	8 mA	1.8 VDC	HOST PULL UP
18	SDIO_CLK	DI	-	1.8 VDC	HOST PULL UP
19	SLOW_CLK	DI	-	1.8 VDC	SLEEP CLOCK (32 kHz)
20	FM_IRQ	DO	4 mA	1.8 VDC	NOT SUPPORTED, NO CONNECT
21	FM_SDA	DO	4 mA	1.8 VDC	NOT SUPPORTED, NO CONNECT
22	FM_SCL	DO	4 mA	1.8 VDC	NOT SUPPORTED, NO CONNECT
23	FM_I2S_CLK	DO	4 mA	1.8 VDC	NOT SUPPORTED, NO CONNECT
24	FM_I2S_DI	DI	4 mA	1.8 VDC	NOT SUPPORTED, CONNECT TO GND
25	FM_I2S_DO	DO	4 mA	1.8 VDC	NOT SUPPORTED, NO CONNECT
26	FM_AUD_RIN	AI	-	-	NOT SUPPORTED, CONNECT TO GND
27	FM_AUD_LIN	AI	-	-	NOT SUPPORTED, CONNECT TO GND
28	FMRFOUT	AO	-	-	NOT SUPPORTED, NO CONNECT
29	FMRFIN	AI	-	-	NOT SUPPORTED, CONNECT TO GND
30	GND	GND	-	-	Ground

Module Pin	Name	I/O Type	Buffer Type	Logic Level	Description
31	FM_AUD_ROUT	AO	-	-	NOT SUPPORTED, NO CONNECT
32	FM_AUD_LOUT	AO	-	-	NOT SUPPORTED, NO CONNECT
33	AUD_FSYNC	DIO	4 mA	1.8 VDC	PCM I/F
34	HCI_RX	DI	8 mA	1.8 VDC	Bluetooth HCI UART RX (*)
35	HCI_RTS	DO	4 mA	1.8 VDC	Bluetooth HCI UART RTS (*)
36	HCI_TX	DIO	8 mA	1.8 VDC	Bluetooth HCI UART TX
37	AUD_CLK	DO	4 mA	1.8 VDC	PCM I/F (*)
38	AUD_OUT	DO	4 mA	1.8 VDC	PCM I/F (*)
39	HCI_CTS	DI	4 mA	1.8 VDC	Bluetooth HCI UART CTS (*)
40	AUD_IN	DI	4 mA	1.8 VDC	PCM I/F (*)
41	BT_FUNC2	DI	4 mA	1.8 VDC	Bluetooth Wakeup[DI] / DC2DC mode[DO](*)
42	BT_FUNC4	DO	4 mA	1.8 VDC	BT_UARTD (DEBUG) (*)
43	VDD_LDO_CLASS_1P5	NC	-	-	VBAT VOLTAGE PRESENT, NO CONNECT
44	GND	GND	-	-	Ground
45	GND	GND	-	-	Ground
46	GND	GND	-	-	Ground
47	GND	GND	-	-	Ground
48	ANT	RF		-	Antenna terminal for WLAN and Bluetooth (note [1])
49	GND	GND	-	-	Ground
50	GND	GND	-	-	Ground
51	GND	GND	-	-	Ground
52	GND	GND	-	-	Ground

PI = Power Input PO = Power Output DI = Digital Input (1.8 VDC Logic Level) DO = Digital Output (1.8 VDC Logic Level)
 AI = Analog Input AO = Analog Output AIO = Analog Input/Output RF = RF Port GND = Ground

Note[1]: Antenna terminal presents DC short circuit to ground.

(*) indicates that pin is capable of bidirectional operation, but is used as the type shown.

Table 3 TiWi5 Module Pin Descriptions

All digital I/O signals use 1.8V logic. If the host microcontroller does not support 1.8V logic, then level shifters MUST be used.

INI FILE RADIO PARAMETERS

There is an ini file that contains WLAN radio parameters which are critical to both the RF performance and EMC compliance of the module.

The ini file available on the LSR wiki is only intended to be used with the LSR WLAN Eval Tool. Note that this ini file will not work when using the TiWi5 module in normal operation which typically involves an operating system. To use the TiWi5 module in normal operation, refer to specifics contained in the TiWi Family INI File Radio Parameter User Guide which is also available for download on the LSR website.

The settings specified in the appropriate ini file must be used to operate the module in compliance with the modular certification for FCC or ETSI. There is a unique ini file for operating the module in compliance with FCC regulations, and a different ini file for operating the module in compliance with the ETSI regulations.

ELECTRICAL SPECIFICATIONS

The majority of these characteristics are based on controlling and conditioning the tests using the TiWi5 control software application. Other control conditions may require these values to be re-characterized by the customer.

Absolute Maximum Ratings

Parameter	Min	Max	Unit
Power supply voltage (VBAT) ⁽⁴⁾⁽⁵⁾	-0.5	+5.5	V
Digital supply voltage (VIO)	-0.5	2.1	V
Voltage on any GPIO	-0.5	VIO + 0.5	V
Voltage on any Analog Pins ⁽³⁾	-0.5	2.1	V
RF input power, antenna port		+10	dBm
Operating temperature ⁽⁶⁾	-40	+85	°C
Storage temperature	-55	+125	°C

1. Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device and are not covered by the warranty. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. All parameters are measured as follows unless stated otherwise: VDD_IN=1.8V, VDDIO_1.8V=1.8V, VDD_LDO_CLASS1P5=3.6V
3. Analog pins: XTALP, XTALM, RFIOBT, DRPWXRBM, DRPWXRBP, DRPWXTB, and also FMRFINP, FMRFINM, FMRFINM, FMAUDLIN, FMAUDRIN, FMAUDLOUT, FMAUDROUT
4. The following signals are from the VBAT group, PMS_VBAT and VDD_LDO_CLASS1P5 (if BT class 1.5 direct VBAT is used).
5. Maximum allowed depends on accumulated time at that voltage; 4.8V for 7 years lifetime, 5.5V for 6 hours cumulative.
6. The device can be reliably operated for 5,000 active-WLAN cumulative hours at T_A of 85°C.

Table 4 Absolute Maximum Ratings

Recommended Operating Conditions

Parameter	Min	Typ	Max	Unit
V _{BAT}	3.0	3.6	4.8	V
VIO	1.62	1.8	1.92	V
V _{IH}	0.65 x VIO	-	VIO	V
V _{IL}	0	-	0.35 x VIO	V
V _{OH} @ 4, 8 mA	VIO - 0.45	-	VIO	V
V _{OL} @ 4, 8 mA	0	-	0.45	V
Ambient temperature range	-40	25	85	°C

Table 5 Recommended Operating Conditions

GMSK Maximum Input Level	PER = 30.8%	-	-5	-	-20	dBm

Table 18 Bluetooth Low Energy Receiver RF Characteristics

WLAN POWER-UP SEQUENCE

The following sequence describes device power-up from shutdown. Only the WLAN Core is enabled; the Bluetooth and FM cores are disabled.

Figure 3 TiWi5 Power-up Sequence Requirements

1. No signals are allowed on the IO pins if no IO power is supplied, because the IOs are not 'failsafe'. Exceptions are CLK_REQ_OUT, SLOWCLK, XTALP, and AUD_XXX, which are failsafe and can tolerate external voltages with no VDD5 and DC2DC.
2. V_{BAT}, V_{IO}, and SLOWCLK must be available before WL_EN.
3. T_{wakeup} = T1 + T2

The duration of T1 is defined as the time from WL_EN=high until F_{REF} is valid for the SoC. T1=~55ms

The duration of T2 depends on:

- Operating system
- Host enumeration for the SDIO/WSPI
- PLL configuration
- Firmware download
- Releasing the core from reset

– Firmware initialization

WLAN POWER-DOWN SEQUENCE

Notes:

1. The DC2DC(1.8V) signal can be monitored on BT_FUNC2 Module Pin (#41)
2. DC_REQ and CLK_REQ are internal signals shown for reference only

Figure 4 TiWi5 Module Power-down Sequence Requirements

1. DC_REQ will go low only if WLAN is the only core working. Otherwise if another core is working (e.g BT) it will stay high.
2. CLK_REQ will go low only if WLAN is the only core working. Otherwise if another core is working and using the F_{REF} (e.g BT) it will stay high.
3. If WLAN is the only core that is operating, WL_EN must remain de-asserted for at least 64μsec before it is re-asserted.

BLUETOOTH POWER-UP SEQUENCE

The following sequence describes device power up from shutdown. Only the Bluetooth core is enabled; the WLAN core is disabled.

Notes:

1. (A) After this sequence is completed, the device is in the low VIO-leakage state while in shutdown
2. The DC2DC(1.8V) signal can be monitored on BT_FUNC2 Module Pin (#41)
3. DC_REQ, CLK_REQ, and F_{REF} are internal signals shown for reference only

Figure 5 Bluetooth Power-up Sequence

Power up requirements:

1. No signals are allowed on the IO pins if no IO power supplied, because the IOs are not 'failsafe'. Exceptions are CLK_REQ_OUT, SLOWCLK, XTALP, and AUD_XXX, which are failsafe and can tolerate external voltages with no VDD and DC2DC.
2. VDD and SLOWCLK must be stable before releasing BT_EN.
3. Fast clock must be stable maximum 55 ms after BT_EN goes HIGH.

BLUETOOTH POWER-DOWN SEQUENCE

Notes:

1. The DC2DC(1.8V) signal can be monitored on BT_FUNC2 Module Pin (#41)
2. DC_REQ and CLK_REQ are internal signals shown for reference only

Figure 6 Bluetooth Power-down Sequence

The TiWi5 module indicates completion of Bluetooth power-up sequence by asserting HCI_RTS low. This occurs up to 100 ms after BT_EN goes high.

ENABLE SCHEME

The module has 3 enable pins, one for each core: WL_EN, and BT_EN and FM_EN. Presently, there are 2 modes of active operation now supported: WLAN and Bluetooth. It is recommended that the FM_EN pin be grounded to disable the FM section. It is also recommended that the FM section be disabled by Bluetooth HCI commands.

1. Each core is operated independently by asserting each EN signal to Logic '1'. In this mode it is possible to control each core asynchronously and independently.
2. Bluetooth mode operation. WLAN will be operated through WL_EN asynchronously and independently of Bluetooth.

IRQ OPERATION

1. The default state of the WLAN_IRQ prior to firmware initialization is 0.
2. During firmware initialization, the WLAN_IRQ is configured by the SDIO module; a WLAN_IRQ changes its state to 1.
3. A WLAN firmware interrupt is handled as follows:
 - a. The WLAN firmware creates an Interrupt-to-Host, indicated by a 1-to-0 transition on the WLAN_IRQ line (host must be configured as active-low or falling-edge detect).
 - b. After the host is available, depending on the interrupt priority and other host tasks, it masks the firmware interrupt. The WLAN_IRQ line returns to 1 (0-to-1 transition on the WLAN_IRQ line).
 - c. The host reads the internal register status to determine the interrupt sources - the register is cleared after the read.
 - d. The host processes in sequence all the interrupts read from this register
 - e. The host unmask the firmware interrupts.
4. The host is ready to receive another interrupt from the WLAN device.

SLOW (32 KHZ) CLOCK SOURCE REQUIREMENTS

The slow clock is always supplied from an external source. It is input on the SLOW_CLK pin, and can be a digital signal in the range of VIO only. For slow clock frequency and accuracy refer to Table 19. The external slow clock must be stable before the system exits from shut down mode.

Parameter [1]	Condition	Symbol	Min	Typ	Max	Unit
Input slow clock frequency				32768		Hz
Input slow clock accuracy	WLAN, BT				+/-250	ppm
Input transition time T_r/T_f – 10% to 90%		T_r/T_f			100	ns
Frequency input duty cycle			30	50	70	%
Input voltage limits	Square wave, DC coupled	V_{IH}	$0.65 \times V_{DD5}$		V_{DD5}	V_{peak}
V_{IL}	0		$0.35 \times V_{DD5}$			
Input impedance			1			MW
Input capacitance					5	pF
Rise and fall time					100	ns
Phase noise	1 kHz			-125		dBc/Hz

[1] Slow clock is a fail safe input

Table 19 Slow Clock Source Requirements

BLUETOOTH HCI UART

Figure 7 Bluetooth UART Timing

Symbol	Characteristics	Condition	Min	Typ	Max	Unit
	Baud rate	Most rates ⁽¹⁾	37.5		4000	kbps
t5, t7	Baud rate accuracy	Receive/Transmit			-2.5 to 1.5	%
t3	CTS low to TX_DATA on		0	2		μs
t4	CTS high to TX_DATA off	Hardware flow control			1	byte
t6	CTS-high pulse width		1			bit
t1	RTS low to RX_DATA on		0	2		μs
t2	RTS high to RX_DATA off	Interrupt set to 1/4 FIFO			16	byte
tb	Bit width (Jitter)		See application note ⁽¹⁾			% relative to ideal bit width

(1) Some exceptions: e.g. for 19.2-MHz max baud rate = 3.84 kbps.

Table 20 Bluetooth UART Timing

Figure 11 SDIO Timing

SOLDERING RECOMMENDATIONS

Recommended Reflow Profile for Lead Free Solder

Note: The quality of solder joints on the castellations ('half vias') where they contact the host board should meet the appropriate IPC Specification. See IPC-A-610-D Acceptability of Electronic Assemblies, section 8.2.4 Castellated Terminations."

Figure 12 Reflow Profile

CLEANING

In general, cleaning the populated modules is strongly discouraged. Residuals under the module cannot be easily removed with any cleaning process.

- Cleaning with water can lead to capillary effects where water is absorbed into the gap between the host board and the module. The combination of soldering flux residuals and encapsulated water could lead to short circuits between neighboring pads. Water could also damage any stickers or labels.
- Cleaning with alcohol or a similar organic solvent will likely flood soldering flux residuals into the RF shield, which is not accessible for post-washing inspection. The solvent could also damage any stickers or labels.
- Ultrasonic cleaning could damage the module permanently.

OPTICAL INSPECTION

After soldering the Module to the host board, consider optical inspection to check the following:

- Proper alignment and centering of the module over the pads.
- Proper solder joints on all pads.
- Excessive solder or contacts to neighboring pads, or vias.

REWORK

The module can be unsoldered from the host board if the Moisture Sensitivity Level (MSL) requirements are met as described in this datasheet.

Never attempt a rework on the module itself, e.g. replacing individual components. Such actions will terminate warranty coverage.

SHIPPING, HANDLING, AND STORAGE

Shipping

Bulk orders of the TiWi5 modules are delivered in trays of 100 or reels of 1,000.

Handling

The TiWi5 modules contain a highly sensitive electronic circuitry. Handling without proper ESD protection may destroy or damage the module permanently.

Moisture Sensitivity Level (MSL)

Per J-STD-020, devices rated as MSL 4 and not stored in a sealed bag with desiccant pack should be baked prior to use.

After opening packaging, devices that will be subjected to reflow must be mounted within 72 hours of factory conditions (<30°C and 60% RH) or stored at <10% RH.

Bake devices for 48 hours at 125°C.

Storage

Please use this product within 6 months after receipt. Any product used after 6 months of receipt needs to have solderability confirmed before use.

The product shall be stored without opening the packing under the ambient temperature from 5 to 35deg.C and humidity from 20 to 70%RH. (Packing materials, in particular, may be deformed at the temperatures above this range.)

Do not store in salty air or in an environment with a high concentration of corrosive gas, such as Cl₂, H₂S, NH₃, SO₂, or NO_x.

Do not store in direct sunlight.

The product should not be subject to excessive mechanical shock.

Repeating Reflow Soldering

Only a single reflow soldering process is encouraged for host boards.

AGENCY CERTIFICATIONS

FCC ID: TFB-TIWI501

IC ID: 5969A-TIWI501

CE: Compliant to standards EN 60950-1, EN 300 328, EN 301 489, and EN 301 893

AGENCY STATEMENTS

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC 15.407(c) states: The device shall automatically discontinue transmission in case of either absence of information to transmit or operational failure. These provisions are not intended to preclude transmission of control or signaling information or the use of repetitive codes used by certain digital technologies to complete frame or burst intervals. Applicants shall include in their application for equipment authorization a description of how this requirement is met.

Description to meet FCC 15.407(c):

Data transmission is always initiated by software, which is then passed down through the MAC, through the digital and analog baseband, and finally to the RF transceiver. Several special packets (ACKs, CTS, PSpoll, etc) are initiated by the MAC. These are the only ways the digital baseband portion will turn on the RF transmitter, which it then turns off at the end of the packet. Therefore, the transmitter will be on only while one of the aforementioned packets are being transmitted.

FCC CAUTION: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

The following device approved under 15.407(b)(4)(ii) may be marketed, sold and imported until March 2, 2020. After this date these devices must comply with the emission limits of 15.407.

Firmware / Software updates are provided by LSR for use with the module in compliance with FCC regulations. Users may obtain this software from the LSR website after they agree to the software license agreement.

All users should refer to the "Antenna Design Guide" located on the LSR website for the specific requirements and design guide for use of the Johanson 2450AD46A5400E chip antenna.

Industry Canada Statements

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that permitted for successful communication.

This device has been designed to operate with the antenna(s) listed below, and having a maximum gain of 2.0 dBi (LSR Dipole), 1.0dBi (Johanson Chip), and .3dBi (Synapse Antenna Configuration). Antennas not included in this list or having a gain greater than 2.0 dBi, 1.0dBi, and .3dBi are strictly prohibited for use with this device. The required antenna impedance is 50 ohms.

List of all Antennas Acceptable for use with the Transmitter

- 1) LS Research 001-0009 dipole antenna and LS Research 080-0001 U.FL to Reverse Polarity SMA cable.
- 2) Johanson 2450AD46A5400E chip antenna.
- 3) Synapse Antenna Configuration.

UNII devices operating within 5.15-5.25 GHz are to be restricted to indoor operations to reduce any potential for harmful interference to co-channel MSS operations.

IC RSS-210 A9.4 (4) states: The device shall automatically discontinue transmission in case of absence of information to transmit, or operational failure. A description of how this is done shall accompany the application for equipment certification. Note that this is not intended to prohibit transmission of control or signaling information or the use of repetitive codes where required by the technology.

Description to meet IC RSS-210 A9.4(4):

Data transmission is always initiated by software, which is then passed down through the MAC, through the digital and analog baseband, and finally to the RF transceiver. Several special packets (ACKs, CTS, PSpoll, etc) are initiated by the MAC. These are the only ways the digital baseband portion will turn on the RF transmitter, which it then turns off at the end of the packet. Therefore, the transmitter will be on only while one of the aforementioned packets are being transmitted.

L'opération est soumise aux deux conditions suivantes: (1) cet appareil ne peut pas provoquer d'interférences et (2) cet appareil doit accepter toute interférence, y compris les interférences qui peuvent causer un mauvais fonctionnement de l'appareil.

Pour réduire le risque d'interférence aux autres utilisateurs, le type d'antenne et son gain doivent être choisis de manière que la puissance isotrope rayonnée équivalente (PIRE) ne dépasse pas celle permise pour une communication réussie.

Cet appareil a été conçu pour fonctionner avec l'antenne (s) ci-dessous, et ayant un gain maximum de 2.0 dBi (LSR Dipole), 1,0 dBi (Johanson Chip), et 0,3 dBi (Configuration Antenne Synapse). Antennes pas inclus dans cette liste ou présentant un gain supérieur à 2.0 dBi, 1,0 dBi et 0,3 dBi sont strictement interdits pour une utilisation avec cet appareil. L'impédance d'antenne requise est de 50 ohms.

Liste de toutes les antennes acceptables pour une utilisation avec l'émetteur

- 1) LS Research 001-0009 antenne dipôle et LS Research 080-0001 U. FL à Reverse SMA à polarité du câble.
- 2) Antenne Johanson puce 2450AD46A5400E.
- 3) Synapse Antenne Configuration.

Dispositifs UNII opérant dans 5.15-5.25 GHz doivent être limités à des opérations à l'intérieur afin de réduire tout risque d'interférences nuisibles à la co-canal exploitation du MSS.

IC RSS-210 A9.4 (4): le dispositif doit automatiquement cesser d'émettre en cas d'absence d'informations à transmettre, ou l'échec opérationnel. Une description de la façon dont cela est fait doit accompagner la demande d'homologation du matériel. Notez que ce n'est pas pour objet d'interdire la transmission de contrôle ou de signalisation d'informations ou l'utilisation de codes répétitifs requis par la technologie.

Description de rencontrer IC RSS-210 A9.4 (4):

La transmission de données est toujours initiée par le logiciel, qui est ensuite transmis à travers la MAC, à travers la bande de base numérique et analogique et, enfin, à l'émetteur-récepteur RF. Plusieurs paquets spéciaux (ACK, CTS, PSPoll, etc) sont initiés par le MAC. Ce sont les seuls moyens de la partie bande de base numérique se met en marche l'émetteur RF, ce qui lui puis s'éteint à la fin du paquet. Par conséquent, l'émetteur sera sur que lorsque l'un des paquets ci-dessus sont transmises.

OEM RESPONSIBILITIES TO COMPLY WITH FCC AND INDUSTRY CANADA REGULATIONS

The TiWi5 Module has been certified for integration into products only by OEM integrators under the following conditions:

This device is granted for use in Mobile only configurations in which the antennas used for this transmitter must be installed to provide a separation distance of at least 20cm from all person and not be co-located with any other transmitters except in accordance with FCC and Industry Canada multi-transmitter product procedures.

As long as the two conditions above are met, further transmitter testing will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed (for example, digital device emissions, PC peripheral requirements, etc.).

IMPORTANT NOTE: In the event that these conditions cannot be met (for certain configurations or co-location with another transmitter), then the FCC and Industry Canada authorizations are no longer considered valid and the FCC ID and IC Certification Number cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC and Industry Canada authorization.

Le module de TiWi5 a été certifié pour l'intégration dans des produits uniquement par des intégrateurs OEM dans les conditions suivantes:

Ce dispositif est accordé pour une utilisation dans des configurations mobiles seul dans lequel les antennes utilisées pour cet émetteur doit être installé pour fournir une distance de séparation d'au moins 20cm de toute personne et ne pas être colocalisés avec les autres émetteurs, sauf en conformité avec la FCC et de l'Industrie Canada, multi-émetteur procédures produit.

Tant que les deux conditions précitées sont réunies, les tests de transmetteurs supplémentaires ne seront pas tenus. Toutefois, l'intégrateur OEM est toujours responsable de tester leur produit final pour toutes les exigences de conformité supplémentaires requis avec ce module installé (par exemple, les émissions appareil numérique, les exigences de périphériques PC, etc.)

NOTE IMPORTANTE: Dans le cas où ces conditions ne peuvent être satisfaites (pour certaines configurations ou de co-implantation avec un autre émetteur), puis la FCC et Industrie autorisations Canada ne sont plus considérés comme valides et l'ID de la FCC et IC numéro de certification ne peut pas être utilisé sur la produit final. Dans ces circonstances, l'intégrateur OEM sera chargé de réévaluer le produit final (y compris l'émetteur) et l'obtention d'un distincte de la FCC et Industrie Canada l'autorisation.

OEM LABELING REQUIREMENTS FOR END-PRODUCT

The TiWi5 module is labeled with its own FCC ID and IC Certification Number. The FCC ID and IC certification numbers are not visible when the module is installed inside another device, as such the end device into which

the module is installed must display a label referring to the enclosed module. The final end product must be labeled in a visible area with the following:

“Contains Transmitter Module FCC ID: TFB-TIWI501”

“Contains Transmitter Module IC: 5969A-TIWI501”

or

“Contains FCC ID: TFB-TIWI501”

“Contains IC: 5969A-TIWI501”

The OEM of the TiWi5 Module must only use the approved antenna(s) listed above, which have been certified with this module.

Le module de TiWi5 est étiqueté avec son propre ID de la FCC et IC numéro de certification. L'ID de la FCC et IC numéros de certification ne sont pas visibles lorsque le module est installé à l'intérieur d'un autre appareil, comme par exemple le terminal dans lequel le module est installé doit afficher une étiquette faisant référence au module ci-joint. Le produit final doit être étiqueté dans un endroit visible par le suivant:

“Contient Module émetteur FCC ID: TFB-TIWI501”

“Contient Module émetteur IC: 5969A-TIWI501”

ou

“Contient FCC ID: TFB-TIWI501”

“Contient IC: 5969A-TIWI501”

Les OEM du module TiWi5 ne doit utiliser l'antenne approuvée (s) ci-dessus, qui ont été certifiés avec ce module.

OEM END PRODUCT USER MANUAL STATEMENTS

The OEM integrator should not to provide information to the end user regarding how to install or remove this RF module or change RF related parameters in the user manual of the end product.

The user manual for the end product must include the following information in a prominent location:

This device is granted for use in Mobile only configurations in which the antennas used for this transmitter must be installed to provide a separation distance of at least 20cm from all person and not be co-located with any other transmitters except in accordance with FCC and Industry Canada multi-transmitter product procedures.

Other user manual statements may apply.

L'intégrateur OEM ne devraient pas fournir des informations à l'utilisateur final sur la façon d'installer ou de supprimer ce module RF ou modifier les paramètres liés RF dans le manuel utilisateur du produit final.

Le manuel d'utilisation pour le produit final doit comporter les informations suivantes dans un endroit bien en vue:

Ce dispositif est accordé pour une utilisation dans des configurations mobiles seule dans laquelle les antennes utilisées pour cet émetteur doit être installé pour fournir une distance de séparation d'au moins 20cm de toute personne et ne pas être co-localisés avec les autres émetteurs, sauf en conformité avec FCC et Industrie Canada, multi-émetteur procédures produit.

Autres déclarations manuel de l'utilisateur peuvent s'appliquer.

EUROPE

CE Notice

This device has been tested and certified for use in the European Union. See the Declaration of Conformity (DOC) for specifics.

If this device is used in a product, the OEM has responsibility to verify compliance of the final product to the EU standards. A Declaration of Conformity must be issued and kept on file as described in the Radio and Telecommunications Terminal Equipment (R&TTE) Directive.

The 'CE' mark must be placed on the OEM product per the labeling requirements of the Directive.

Declaration of Conformity (DOC)

This DOC can be downloaded from the LSR Wiki.
