

ASSEMBLING YOUR POWER AIR SURFER

Before you start assembling, ask an adult to help. Take all items out of the package and identify the parts.

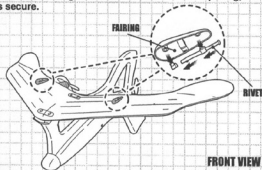

- 1** Take top wing and place holes on top of fuselage. Then fasten together by inserting rivets and secure. If it is difficult to insert rivet from one side, try inserting from the other side.

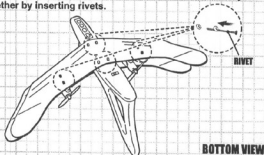

- 2** Take each strut and propeller and attach it to the underside of the top wing. (Make sure that the propeller is positioned close to the top wing.)

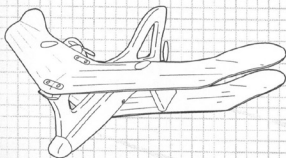

- 3** Fasten strut and propeller to top wing by inserting rivets. Then take fairing and attach to rivets on the top wing, until it is secure.

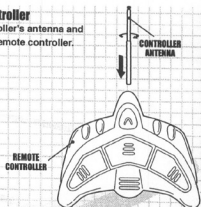

- 4** Flip the fuselage over (the top wing should be lying on the ground). Now take the bottom wing and attach holes to bottom of the fuselage and struts. Then fasten securely together by inserting rivets.

- 5** Now your Power Air Surfer is ready to fly!

- 6 Remote Controller**
Take the controller's antenna and screw it into the remote controller.

INSTALLING BATTERIES

- To install the 7.2V rechargeable batteries, unscrew single screw on battery cover.
- Insert the batteries, making sure to match the $\ominus$ and $\oplus$ polarity direction.
- Replace the battery cover.
