

# RF Exposure Evaluation Declaration

Product Name: Cradle

Model No. : CCB01-010BT-BF

FCC ID : HD5-CCB01BF

Applicant: Honeywell International Inc.

Address: 9680 Old Bailes Rd, Fort Mill, SC 29707, USA

Date of Receipt: Nov. 30, 2016

Test Date : Nov. 30, 2016~ Jan. 09, 2017

Issued Date : Jan. 24, 2017

Report No. : 16B2201R-RF- US-P20V02

Report Version : V1.0

The test results relate only to the samples tested.

The test results shown in the test report are traceable to the national/international standard through the calibration of the equipment and evaluated measurement uncertainty herein.

This report must not be used to claim product endorsement by CNAS, TAF or any agency of the government. The test report shall not be reproduced without the written approval of DEKRA Testing & Certification (Suzhou) Co., Ltd.

## **Test Report Certification**

Issued Date: Jan. 24, 2017

Report No.: 16B2201R-RF-US-P20V02

Product Name : Cradle

Applicant : Honeywell International Inc.

Address : 9680 Old Bailes Rd, Fort Mill, SC 29707, USA

Manufacturer : 1, Honeywell International Inc

2 Metro(Suzhou)Technologies Co.,Ltd

Address : 1, 9680 Old Bailes Rd, Fort Mill, SC 29707, USA

2. No.221 Xinghai street China-Singapore Suzhou

Industrial Park

Model No. : CCB01-010BT-BF

FCC ID : HD5-CCB01BF

Brand Name : HONEYWELL

EUT Voltage : DC 5V

Test Voltage : AC 100-240V; 50/60Hz Applicable Standard : KDB 447498 D01v06

Test Result : Complied

Performed Location : DEKRA Testing and Certification (Suzhou) Co., Ltd.

No.99 Hongye Rd., Suzhou Industrial Park, Suzhou,

215006, Jiangsu, China

## **RF Exposure Evaluation**

#### 1.1. Limits

According to KDB 447498 D01 General RF Exposure Guidance v06

#### 4.3.1 Standalone SAR test exclusion considerations

1) The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)]  $\cdot [\sqrt{f(GHz)}]$   $\leq 3.0$  for 1-g SAR and  $\leq 7.5$  for 10-g extremity SAR,where

- f(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison
- 3.0 and 7.5 are referred to as the numeric thresholds in the step 2 below

The test exclusions are applicable only when the minimum test separation distance is  $\leq$  50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is  $\leq$  5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

- 2) At 100 MHz to 6 GHz and for test separation distances > 50 mm, the SAR test exclusion threshold is determined according to the following, and as illustrated in Appendix B:
- a) [Power allowed at numeric threshold for 50 mm in step 1) + (test separation distance 50 mm)·( f(MHz)/150)] mW, at 100 MHz to 1500 MHz
- b) [Power allowed at numeric threshold for 50 mm in step 1) + (test separation distance 50 mm)·10] mW at > 1500 MHz and  $\leq$  6 GHz
- 3) The 1-g and 10-g SAR test exclusion thresholds for below 100 MHz at test separation distances ≤ 50 mm are determined by:
- a) The power threshold at the corresponding test separation distance at 100 MHz in step 2) is multiplied by  $[1 + \log(100/f(MHz))]$  for test separation distances > 50 mm and < 200 mm
- b) The power threshold determined by the equation in a) for 50 mm and 100 MHz is multiplied by  $\frac{1}{2}$  for test separation distances  $\leq$  50 mm
- c) SAR measurement procedures are not established below 100 MHz. When SAR test exclusion cannot be applied, a KDB inquiry is required to determine SAR evaluation requirements for any test results to be acceptable. Note: when the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

Report No: 16B2201R-RF-US-P20V02

## 1.2. Test Procedure

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

The temperature and related humidity: 18°C and 78% RH.

## 1.3. Test Result of RF Exposure Evaluation

Product	:	Cradle			
Test Item	:	RF Exposure Evaluation			
Test Site	:	AC-6			

### Antenna Gain:

Antenna manufacturer	N/A						
Antenna Delivery	$\boxtimes$	1*TX+1*RX		☐ 2*TX+2*RX ☐ 3*TX+3*RX			
Antenna technology	$\boxtimes$	SISO					
		MIMO		Basic			
				CDD			
				Beam-forming			
Antenna Type		External		Dipole			
		Internal		PIFA			
	$\boxtimes$			PCB			
			$\boxtimes$	Ceramic Chip Antenna			
				Metal plate type F antenna			
Antenna Gain	1.8d	Bi					

Based on The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm and the formula below:

Estimated SAR=
$$\sqrt{f(GHz)} * \frac{\text{(Max Power of channel, mW)}}{\text{Min. Separation Distance, mm}}$$

Band	Band Exposure Condition	Pmax	Pmax	Distance	f(GHz)		Stand-alone	
						calculation	Test	CAD Toot
		(dDm)	(mu)	(mm)		result	exclusion	SAR Test
		(dBm)	(mw)				threshold	
ВТ	Body	3.78	2.39	5	2.402	0.74	3.00	No

Conclusion: 2400MHz-2480MHz SAR was not required.
