# Test Report

**Report No.:** CQASZ20220400631E-01  
**Applicant:** Shenzhen Hollyland Technology Co.,Ltd  
**Address of Applicant:** 8F, Building 5D, Skyworth Innovation Valley, Tangtou Road. Shiyan Street, Baoan District Shenzhen, China.  
**Equipment Under Test (EUT):**  
**Product:** WIRELESS VIDEO TRANSMISSION SYSTEM  
**Model No.:** MARS 300 PRO II, MARS 300 PRO Premium, MARS 300 PRO 2022, MARS 300 PRO Max  
**Test Model No.:** MARS 300 PRO II  
**Brand Name:** Hollyland  
**FCC ID:** 2ADZC-9802HT  
**Standards:** 47 CFR Part 15, Subpart E  
KDB 789033 D02 General UNII Test Procedures New Rules v02r01  
KDB 558074 D01 15.247 Meas Guidance v05r02  
**Date of Receipt:** 2022-04-13  
**Date of Test:** 2022-04-13 to 2022-05-27  
**Date of Issue:** 2022-05-31  
**Test Result:** **PASS\***

\*In the configuration tested, the EUT complied with the standards specified above

**Tested By:**

## 1 Version

### Revision History Of Report

| Report No.           | Version | Description    | Issue Date |
|----------------------|---------|----------------|------------|
| CQASZ20220400631E-01 | Rev.01  | Initial report | 2022-05-31 |

## 2 Test Summary

| Test Item                                                               | Test Requirement                           | Test method              | Result |
|-------------------------------------------------------------------------|--------------------------------------------|--------------------------|--------|
| Antenna Requirement                                                     | 47 CFR Part 15 Subpart C<br>Section 15.203 | ANSI C63.10-2013         | PASS   |
| AC Power Line Conducted<br>Emission                                     | 47 CFR Part 15 Subpart C<br>Section 15.207 | ANSI C63.10-2013         | PASS   |
| Conducted Output Power and<br>transmit power control<br>mechanism       | 47 CFR Part 15 Subpart E                   | ANSI C63.10-2013         | PASS   |
| Emission Bandwidth                                                      | 47 CFR Part 15 Subpart E                   | ANSI C63.10-2013         | PASS   |
| Peak Power Spectral Density                                             | 47 CFR Part 15 Subpart E                   | ANSI C63.10-2013         | PASS   |
| Frequency stability                                                     | 47 CFR Part 15 Subpart E                   | ANSI C63.10-2013         | PASS   |
| Operation in the absence of<br>information to the transmit              | 47 CFR Part 15 Subpart E                   | 47 CFR Part 15 Subpart E | PASS   |
| Radiated Spurious Emissions                                             | 47 CFR Part 15 Subpart E                   | ANSI C63.10-2013         | PASS   |
| Restricted bands around<br>fundamental frequency<br>(Radiated Emission) | 47 CFR Part 15 Subpart E                   | ANSI C63.10-2013         | PASS   |

Remark:

The tested sample(s) and the sample information are provided by the client.

Tx: In this whole report Tx (or tx) means Transmitter.

Rx: In this whole report Rx (or rx) means Receiver.

RF: In this whole report RF means Radiated Frequency.

CH: In this whole report CH means channel.

Volt: In this whole report Volt means Voltage.

Temp: In this whole report Temp means Temperature.

Humid: In this whole report Humid means humidity.

Press: In this whole report Press means Pressure.

N/A: In this whole report not application

## 4 Test Requirement

### 4.1 Test setup

#### 4.1.1 For Conducted test setup

#### 4.1.2 For Radiated Emissions test setup

Radiated Emissions setup:

Figure 1. Below 30MHz

Figure 2. 30MHz to 1GHz

Figure 3. Above 1GHz

#### 4.1.3 For Conducted Emissions test setup

##### Conducted Emissions setup

## 4.2 Test Environment

|                                                                                                                                                                                                              |                  |             |

### 5.2 General Description of EUT

|                                  |                                                                            |
|----------------------------------|----------------------------------------------------------------------------|
| Product Name:                    | WIRELESS VIDEO TRANSMISSION SYSTEM                                         |
| Model No.:                       | MARS 300 PRO II, MARS 300 PRO Premium, MARS 300 PRO 2022, MARS 300 PRO Max |
| Test Model No.:                  | MARS 300 PRO II                                                            |
| Trade Mark:                      | Hollyland                                                                  |
| Software Version:                | V1.0.0.5                                                                   |
| Hardware Version:                | V1.1.0                                                                     |
| Power Supply:                    | DC 12V 2A                                                                  |
| EUT Supports Radios application: | 5GHz: custom: U-NII-1: 5.15-5.25GHz; U-NII-3: 5.725-5.850GHz               |

### 5.3 Product Specification subjective to this standard

|                       |                                                                                                                    |
|-----------------------|--------------------------------------------------------------------------------------------------------------------|
| Operation Frequency:  | 5180MHz ~5220 MHz<br>5745MHz ~5825 MHz                                                                             |
| Channel Numbers:      | 5180MHz ~5220MHz/ 2 channel<br>5745MHz ~5825MHz/ 3 channel                                                         |
| Type of Modulation:   | OFDM                                                                                                               |
| Sample Type:          | <input checked="" type="checkbox"/> Mobile <input type="checkbox"/> Portable <input type="checkbox"/> Fix Location |
| Test Power Grade:     | N/A                                                                                                                |
| Test Software of EUT: | MainWindow (manufacturer declare)                                                                                  |
| Antenna Type:         | External antenna                                                                                                   |
| Antenna gain:         | 3dBi                                                                                                               |

Operation Frequency each of channel

| 5150MHz ~5250 MHz |           |         |           |
|-------------------|-----------|---------|-----------|
| Channel           | Frequency | Channel | Frequency |
| 0                 | 5180MHz   | 1       | 5220MHz   |
| 5725MHz ~5850 MHz |           |         |           |
| Channel           | Frequency | Channel | Frequency |
| 2                 | 5745MHz   | 3       | 5785MHz   |
| 4                 | 5825MHz   | NA      | NA        |

## 5.4 Description of Support Units

The EUT has been tested with associated equipment below.

| Description | Manufacturer | Model No.      | Certification | Supplied by |
|-------------|--------------|----------------|---------------|-------------|
| PC          | Lenovo       | ThinkPad E450c | FCC ID        | CQA         |

## 5.5 Test Location

All tests were performed at:

**Shenzhen Huaxia Testing Technology Co., Ltd.,**

1F., Block A of Tongsheng Technology Building, Huahui Road, Dalang Street, Longhua New District, Shenzhen, Guangdong, China

## 5.6 Test Facility

• **A2LA (Certificate No. 4742.01)**

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 4742.01.

• **FCC Registration No.: 522263**

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration No.:522263

## 5.7 Deviation from Standards

None.

## 5.8 Abnormalities from Standard Conditions

None.

## 5.9 Other Information Requested by the Customer

None.

## 5.10 Measurement Uncertainty (95% confidence levels, k=2)

| No. | Item                            | Measurement Uncertainty |
|-----|---------------------------------|-------------------------|
| 1   | Radio Frequency                 | $3 \times 10^{-8}$      |
| 2   | RF power, conducted             | 0.86dB                  |
| 3   | Radiated Spurious emission test | 5.12dB (Below 1GHz)     |
|     |                                 | 4.6dB (Above 1GHz)      |
| 4   | Conduction emission             | 3.5dB (9kHz to 150kHz)  |
|     |                                 | 3.1dB (150kHz to 30MHz) |
| 5   | Temperature test                | 0.8°C                   |
| 6   | Humidity test                   | 2.0%                    |
| 7   | DC power voltages               | 0.5%                    |

## 6 Equipment List

| Test Equipment                            | Manufacturer | Model No.              | Instrument No. | Calibration Date | Calibration Due Date |

**2. Conducted Average Output Power****Measurement Data**

| Test Mode | Antenna | Channel | Meas.Level [dBm] | Av.Power [dBm] | Verdict |
|-----------|---------|---------|------------------|----------------|---------|
| 11n       | Ant1    | 5180    | 9.226            | 13.65          | PASS    |
| 11n       | Ant1    | 5220    | 8.602            | 13.25          | PASS    |
| 11n       | Ant1    | 5745    | 7.99             | 13.14          | PASS    |
| 11n       | Ant1    | 5785    | 8.548            | 13.32          | PASS    |
| 11n       | Ant1    | 5825    | 7.99             | 13.14          | PASS    |

Remark:

Av.Power=Meas.Level+10 log (1/duty cycle)

E.i.r.p=Av.Power+G,

G = antenna gain in dBi.

## Appendix C): Power Spectral Density

Result Table

| Test Mode | Antenna | Channel | Meas.Level [dBm] | Duty Cycle Factor [dB] | PSD [dBm/MHz] | Limit [dBm/MHz]    | Verdict |
|-----------|---------|---------|------------------|------------------------|---------------|--------------------|---------|
| 11n       | Ant1    | 5180    | 3.35             | 4.424                  | 9.654         | 11.00              | PASS    |
| 11n       | Ant1    | 5220    | 3.16             | 4.648                  | 9.878         | 11.00              | PASS    |
| Test Mode | Antenna | Channel | Meas.Level [dBm] | Duty Cycle Factor [dB] | PSD [dBm/MHz] | Limit [dBm/500kHz] | Verdict |
| 11n       | Ant1    | 5745    | 5.23             | 5.15                   | 10.38         | 30.00              | PASS    |
| 11n       | Ant1    | 5785    | 4.57             | 4.772                  | 9.342         | 30.00              | PASS    |
| 11n       | Ant1    | 5825    | 5.45             | 5.15                   | 10.6          | 30.00              | PASS    |

**Remark:**

PSD = Meas PSD + Duty Cycle Factor

## Appendix D): Band Edge Measurements

Result Table

| Test Mode | Antenna | Channel | Max.Level [dBm] |            | Verdict |
|-----------|---------|---------|-----------------|------------|---------|
| 11n       | Ant1    | 5180    | -37.63          |            | PASS    |
| 11n       | Ant1    | 5220    | -36.63          |            | PASS    |
| Test Mode | Antenna | Channel | Max.Level [dBm] |            | Verdict |
|           |         |         | Below 5715      | 5715-5725  |         |
| 11n       | Ant1    | 5745    | -41.96          | -38.22     | PASS    |
| Test Mode | Antenna | Channel | Max.Level [dBm] |            | Verdict |
|           |         |         | 5850-5860       | Above 5860 |         |
| 11n       | Ant1    | 5825    | -37.84          | -35.45     | PASS    |

## Appendix E): Frequency Stability

### Measurement Data

| Frequency Stability Versus Temp. |         |                    |                 |
|----------------------------------|---------|--------------------|-----------------|
| Operating Frequency: 5220 MHz    |         |                    |                 |
| Temp                             | Voltage | Measured Frequency | Frequency Drift |
| (°C)                             |         | (MHz)              | (ppm)           |
| 50                               | VN      | 5219.944           | -10.728         |
| 40                               |         | 5219.935           | -12.452         |

Note: All the modulation and channels had been tested, but only the worst data recorded in the report.

## Appendix F): Antenna Requirement

### 15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

### 15.407(a)(1) (2) requirement:

The conducted output power limit specified in paragraph (a) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (a) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power and the peak power spectral density shall be reduced by the by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

### EUT Antenna:

The antenna is External antenna with reversed SMA connector. The best case gain of the 5G antenna is 3dBi@Band 1, 3dBi@Band 4, Only one antenna is used for transmission, and the other root is a receiving antenna and does not transmit signals.

## Appendix G): Operation in the absence of information to the transmit

### 15.407(c) requirement:

The device shall automatically discontinue transmission in case of either absence of information to transmit or operational failure. These provisions are not intended to preclude the transmission of control or signal ling information or the use of repetitive codes used by certain digital technologies to complete frame or burst intervals. Applicants shall include in their application for equipment authorization a description of how this requirement is met.

### Operation in the absence of information to the transmit

While the EUT is not transmitting any information, the EUT can automatically discontinue transmission and become standby mode for power saving. The EUT can detect the controlling signal of ASK message transmitting from remote device and verify whether it shall resend or discontinue transmission. (manufacturer declare )

## Appendix H): AC Power Line Conducted Emission

| Test Procedure:       | <p>Test frequency range :150KHz-30MHz</p> <p>1)The mains terminal disturbance voltage test was conducted in a shielded room.</p> <p>2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a 50Ω/50μH + 5Ω linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.</p> <p>3)The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane,</p> <p>4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.</p> <p>5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10 on conducted measurement.</p> |                       |              |  |            |         |          |           |           |       |    |    |      |    |    |

### Measurement Data

An initial pre-scan was performed on the live and neutral lines with peak detector.

Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected.

Notes:

1. The following Quasi-Peak and Average measurements were performed on the EUT:
2. Final Test Level =Receiver Reading + LISN Factor + Cable Loss.
3. The 6Mbps of rate of OFDM\_5240 is the worst case, only the worst data recorded in the report.

## Appendix I): Restricted bands around fundamental frequency (Radiated Emission)

| Test Procedure: | <p><b>Below 1GHz test procedure as below:</b></p> <ol style="list-style-type: none"> <li>The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.</li> <li>The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</li> <li>The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</li> <li>For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> <li>Place a marker at the end of the restricted band closest to the transmit frequency to show compliance. Also measure any emissions in the restricted bands. Save the spectrum analyzer plot. Repeat for each power and modulation for lowest and highest channel</li> </ol> <p><b>Above 1GHz test procedure as below:</b></p> <ol style="list-style-type: none"> <li>Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber and change form table 0.8 metre to 1.5 metre( Above 18GHz the distance is 1 meter and table is 1.5 metre).</li> <li>Test the EUT in the lowest channel , the Highest channel</li> <li>The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is worse case.</li> <li>Repeat above procedures until all frequencies measured was complete.</li> </ol> |                           |        |                  |            |

Note:

1) Through Pre-scan transmitting mode with all kind of modulation and data rate, find the 6Mbps is the worst case of OFDM; and then Only the worst case is recorded in the report.

2) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level = Receiver Reading - Correct Factor

Correct Factor = Preamplifier Factor - Antenna Factor - Cable Factor

## Appendix J): Radiated Spurious Emissions

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                             |                                  |                 |            |                           |

| <b>Below 1GHz test procedure as below:</b><br>a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.<br>b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.<br>c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.<br>d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading.<br>e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.<br>f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet. |                                                                                                                                                                                                                                                                             |                                  |                 |            |                           |
| <b>Above 1GHz test procedure as below:</b><br>g. Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber and change form table 0.8 metre to 1.5 metre( Above 18GHz the distance is 1 meter and table is 1.5 metre)<br>h. Test the EUT in the lowest channel ,the middle channel ,the Highest channel<br>i. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is worse case.<br>j. Repeat above procedures until all frequencies measured was complete.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                             |                                  |                 |            |                           |

#### Remark:

- 1) The 6Mbps of rate of OFDM at 1 channel is the worst case, only the worst data recorded in the report.
- 2) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:  
Final Test Level = Receiver Reading + Antenna Factor + Cable Factor – Preamplifier Factor
- 3) Scan from 9kHz to 40GHz, The disturbance above 18GHz and below 30MHz was very low, and the above harmonics were the highest point could be found when testing, so only the above harmonics had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported.
