

**EXHIBIT 6****Section 2.1033 (c)(10) CIRCUITRY AND DEVICES FOR SUPPRESSION OF SPURIOUS RADIATION**

A description of all circuitry and devices provided for suppression of spurious radiation.

Response

The SBCBR transceiver was designed in adherence to proper Electromagnetic Compatibility (EMC) guidelines and RF shielding to significantly suppress inter-modulation products, carrier induced harmonics and other spurious signals as well as the emissions radiated from them. The suppression of spurious radiation from the SBCBR unit was achieved by the following two techniques:

1. Proper grounding and shielding of the circuitry and device,
2. Proper filtering in the transceiver unit.
