Summary9

Appendix A: Test Common requirements for all bands.....11

Appendix B: Tests results for the U-NII-1 Band 5.15 – 5.25 GHz57

Appendix C: Tests results for the U-NII-3 Band 5.725 – 5.85 GHz120

Competences and guarantees

DEKRA Testing and Certification is a testing laboratory accredited by the National Accreditation Body (ENAC - Entidad Nacional de Acreditación), to perform the tests indicated in the Certificate No. 51/LE 147.

DEKRA Testing and Certification is a FCC-recognized accredited testing laboratory with appropriate scope of accreditation that include testing performed in this test report.

DEKRA Testing and Certification is an ISED-recognized accredited testing laboratory with appropriate scope of accreditation that include testing performed in this test report

In order to assure the traceability to other national and international laboratories, DEKRA Testing and Certification has a calibration and maintenance program for its measurement equipment.

DEKRA Testing and Certification guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at DEKRA Testing and Certification at the time of performance of the test.

DEKRA Testing and Certification is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

The results presented in this Test Report apply only to the particular item under test established in this document.

IMPORTANT: No parts of this report may be reproduced or quoted out of context, in any form or by any means, except in full, without the previous written permission of DEKRA Testing and Certification.

General conditions

1. This report is only referred to the item that has undergone the test.
2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
3. This document is only valid if complete; no partial reproduction can be made without previous written permission of DEKRA Testing and Certification.
4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of DEKRA Testing and Certification and the Accreditation Bodies.

Uncertainty

Uncertainty (factor k=2) was calculated according to the DEKRA Testing and Certification internal document PODT000.

Data provided by the client

The following data has been provided by the client:

1. Information relating to the description of the sample ("Identification of the item tested", "Trademark", "Model and/or type reference tested").
2. The sample of NTG7 PREMIUM is an automotive head unit to be installed in cars with the following features: FM/AM/DAB/DVBT, USB, Bluetooth, WLAN and GNSS.

DEKRA Testing and Certification S.A.U. declines any responsibility with respect to the information provided by the client and that may affect the validity of result.

Usage of samples

Samples undergoing test have been selected by: The client.

- Sample S/01 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
60268/015	Automotive Infotainment System	NTG7 PREMIUM	HBM239GQ0KS000354	2019/08/26
60268/048	Radio Controller of Automotive Infotainment System	--	--	2019/08/28
60268/017	Harness	--	--	2019/08/26
60268/245	Antennas	--	--	2019/08/26

Sample S/01 has undergone the following test(s): All RADIATED tests above 1 GHz indicated in Appendixes B and C.

- Sample S/02 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
60268/059	Automotive Infotainment System	NTG7 PREMIUM	HBM239KS000361	2019/09/23
60268/025	Cable RF Harness Short	--	--	2019/08/28
60268/245	Antennas	--	--	2019/08/26

Sample S/02 has undergone the following test(s): All RADIATED tests above below 1 GHz indicated in Appendixes B and C.

- Sample S/03 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
60268/015	Automotive Infotainment System	NTG7 PREMIUM	HBM239GQ0KS000354	2019/08/26
60268/048	Radio Controller of Automotive Infotainment System	--	--	2019/08/28
60268/026	Cable RF Harness Short	--	--	2019/08/28

Sample S/03 has undergone the following test(s): All CONDUCTED tests indicated in Appendixes A, B and C for SISO MODE.

- Sample S/04 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
60268/059	Automotive Infotainment System	NTG7 PREMIUM	HBM239K\$000361	2019/09/23
60268/026	Cable RF Harness Short	--	--	2019/08/28

Sample S/04 has undergone the following test(s): All CONDUCTED tests indicated in Appendixes A, B and C for MIMO MODE.

Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %
Air pressure	Min. = 860 mbar Max. = 1060 mbar

In the semianechoic chamber, the following limits were not exceeded during the test.

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %
Air pressure	Min. = 860 mbar Max. = 1060 mbar

In the chamber for conducted measurements, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 35 %
Air pressure	Min. = 860 mbar Max. = 1060 mbar

Remarks and comments

The tests have been performed by the technical personnel: Jesús García, Verónica García, Ignacio Cabra, Nicolás Salguero, Miguel Ángel Torres, Francisco José Alcaide, Cristina Calle, Jaime Barranquero and José Alberto Aranda.

INDEX

FCC 15.35 (c) / RSS-Gen 6.10. Duty Cycle13

RSS-Gen 6.6 / RSS-247 6.2. 99% Occupied Bandwidth24

FCC 15.403 (i) 26 dB Emission Bandwidth (EBW).....34

FCC 15.35 (c) / RSS-Gen 6.10. Duty Cycle

SPECIFICATION:

When the radiated emission limits are expressed in terms of the average value of the emission, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.

RESULTS:

The results below are for data rates with a duty cycle less than 98%. The results for all rest of modes having a value > 98%.

Tests performed on the SISO mode CORE-0_Port3 Antenna.

Tests performed on the MIMO mode CORE-MIMO_Port1 & Port4 Antennas.

	802.11ac VHT80: MCS0 to MCS9	
Setting of cores / ports:	3, 1+4.	
Beamforming:	No.	
Frequency Range:	5150 MHz to 5250 MHz	
Channel Spacing:	20 MHz	
Transmit Channels	Channel	Channel Frequency (MHz)
	Lowest: 36	5180
	Middle: 40	5200
	Highest: 48	5240
Channel Spacing:	40 MHz	
Transmit Channels	Channel	Channel Frequency (MHz)
	Lowest: 38	5190
	Highest: 46	5230
Channel Spacing:	80 MHz	
Transmit Channels	Middle: 42	5210

The test set-up was made in accordance to the general provisions of FCC Unlicensed National Information Infrastructure (U-NII) Devices 789033 D02 General U-NII Test Procedures New Rules v02r01 dated Dec 14, 2017.

The EUT was tested in the following operating mode:

- Continuously transmitting with a modulated carrier at maximum power in all required channels using the supported data rates/modulations types.

The field strength at the band edges was evaluated for each mode on the lowest and highest channels at the rated power for the channel under test.

For all modes, the EUT was configured in test mode using a software application. The application was used to enable a continuous transmission and to select the test channels as required. The client supplied instructions to configure the EUT. The customer supplied a document containing the setup instructions.

The worst cases for testing were identified for output power and spurious levels at the band edges which were selected based on preliminary testing that correspond to next data rates:

- 802.11a20: 6 Mbits
- 802.11n HT20: MCS0
- 802.11n HT40: MCS0
- 802.11ac VHT20: MCS0

CONDUCTED MEASUREMENTS

The equipment under test was set up in a shielded room and connected to the spectrum analyzer using a low loss RF cable. The reading in the spectrum analyzer is corrected taking into account the internal and external RF cable loss.

For all modes:

The DC supply voltage is applied using an external power supply.

RADIATED MEASUREMENTS

All radiated tests were performed in a semi-anechoic chamber. The measurement antenna is situated at a distance of 1 m for the frequency range 1 GHz-40 GHz (1 GHz-18 GHz Double ridge horn antenna and 18 GHz-40 GHz horn antenna).

For radiated emissions in the range 1 GHz-40 GHz that is performed at a distance closer than the specified distance, an inverse proportionality factor of 20 dB per decade is used to normalize the measured data for determining compliance.

The EUT was placed at a height of 80 cm above the reference ground plane in the center of the chamber turntable to perform the measurements below 1GHz and the EUT was placed at a height of 1.5 meters above the test chamber floor in the center of the chamber turntable to perform the measurements above 1GHz. It was also rotated 360° and the antenna height was varied from 1 to 4 meters to find the maximum radiated emission.

Measurements were made in both horizontal and vertical planes of polarization.

The final measured value, for the given emission, in the tables below incorporates the calibrated antenna factor and cable loss.

Radiated measurements setup $f < 1$ GHz.

Radiated measurements setup $f > 1$ GHz up to 18 GHz.

Radiated measurements setup $f > 18$ GHz up to 40 GHz.

FCC 15.407 (a)(1)(ii) / RSS-247 6.2.1.1 Transmitter Maximum Conducted Output Power

SPECIFICATION:

FCC 15.407: For client devices in the band 5.15-5.25 GHz, the maximum conducted output power over the frequency band of operation shall not exceed 250 mW (24 dBm) provided the maximum antenna gain does not exceed 6 dBi. If transmitting antennas of directional gain greater than 6 dBi are used, the maximum conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

RSS-247: The maximum e.i.r.p. shall not exceed 200 mW (23 dBm) or $10 + 10 \log_{10} B$, dBm, whichever power is less. B is the 99% emission bandwidth in MHz.

RESULTS:

The maximum conducted output power was measured using the channel power integration method according to point E) 2) b) (Method SA-1) of 789033 D02 General UNII Test Procedures New Rules v02r01 when the duty cycle is >98% and the channel power integration method according to point E) 2) d) (Method SA-2) of 789033 D02 General UNII Test Procedures New Rules v02r01 when the duty cycle is <98%.

For data rates where the EUT was transmitting at <98% duty cycle, the duty calculated in Appendix A was added to the measured power in order to calculate the total average power during the actual transmission time.

The e.i.r.p. levels are calculated by adding the declared maximum antenna gain (dBi).

Preliminary tests determined the SISO worst case is CORE-0_Port3 Antenna.

Preliminary tests determined the MIMO worst case is CORE-MIMO_Port1 & Port4 Antennas.

- SISO – CORE-0_Port3 Antenna – Declared Maximum Antenna Gain: +2.5 dBi
- MIMO – CORE-MIMO_Port1 & Port4 Antennas – Declared Maximum Antenna Gain:
 - Port4 – Declared Maximum Antenna Gain: +4.5 dBi
 - Port1 – Declared Maximum Antenna Gain: +4.5 dBi

For all modes of operation, the antenna gain is less than 6 dBi.

SISO – CORE-0_Port3 Antenna:

FCC 15.407 (a)(1)(ii) Density / RSS-247 6.2.1.1. Maximum Power Spectral Density

SPECIFICATION:

FCC 15.407: The maximum power spectral density shall not exceed 17 dBm in any 1 megahertz band. If transmitting antennas of directional gain greater than 6 dBi are used, the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

RSS-247: The e.i.r.p. spectral density shall not exceed 10dBm in any 1.0 MHz band.

RESULTS:

The maximum power spectral density (PSD) was measured using the method according to point F) referencing E.2.b) (Method SA-1) and E.2.b) (Method SA-2) of Guidance 789033 D02 General UNII Test Procedures New Rules v02r01.

The PSD test uses the same setup as the transmitter maximum conducted output power test. The result of the Peak PSD was measured by colocation a marker on the peak of the signal and the results are in the tables below.

The e.i.r.p. levels are calculated by adding the declared maximum antenna gain (dBi).

Preliminary tests determined the SISO worst case is CORE-0_Port3 Antenna.

Preliminary tests determined the MIMO worst case is CORE-MIMO_Port1 & Port4 Antennas.

- SISO – CORE-0_Port3 Antenna – Declared Maximum Antenna Gain: +2.5 dBi
- MIMO – CORE-MIMO_Port1 & Port4 Antennas – Declared Maximum Antenna Gain:
 - Port4 – Declared Maximum Antenna Gain: +4.5 dBi
 - Port1 – Declared Maximum Antenna Gain: +4.5 dBi

For all modes of operation, the antenna gain is < 6 dBi.

SISO – CORE-0_Port3 – Antenna:

Maximum PSD (dBm/MHz)	-1.96	-4.00
Maximum PSD E.I.R.P. (dBm/MHz)	2.54	0.50
Measurement uncertainty (dB)	<±1.56	

Verdict: PASS

FCC 15.407 (b)(1)(6) / RSS-247 6.2.1.2. Out of Band Radiated Emissions

SPECIFICATION:

For transmitters operating in the 5.15–5.25 GHz band: all emissions outside of the 5.15–5.35 GHz band shall not exceed an EIRP of –27 dBm/MHz (68.23 dBμV/m at 3 m distance).

Radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)):

Frequency Range (MHz)	Field strength (μV/m)	Field strength (dBμV/m)	Measurement distance (m)
0.009-0.490	2400/F(kHz)	-	300
0.490-1.705	24000/F(kHz)	-	300
1.705 - 30.0	30	-	30
30 - 88	100	40	3
88 - 216	150	43.5	3
216 - 960	200	46	3
960 - 40000	500	54	3

The emission limits shown in the above table are based on measurements employing CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector.

For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

RESULTS:

The situation and orientation was varied to find the maximum radiated emission. It was also rotated 360° and the antenna height was varied from 1 to 4 meters to find the maximum radiated emission.

Measurements were made in both horizontal and vertical planes of polarization.

All tests were performed in a semi-anechoic chamber at a distance of 1m for the frequency range 1 GHz-40 GHz and a distance of 3m for frequency range 30MHz-1GHz.

The field strength is calculated by adding correction factor to the measured level from the spectrum analyzer. This correction factor includes antenna factor, cable loss and pre-amplifiers gain.

Test performed on the following worst case: 802.11a20: 6 Mbits. The worst case was determined by measuring the eirp density (radiated).

SISO CORE-0_Port3 Antenna:

Frequency range 30 MHz - 1 GHz

The spurious emissions below 1 GHz do not depend on either the operating channel or the modulation mode selected in the EUT.

Spurious frequencies detected at less than 20 dB below the limit:

Spurious frequency (MHz)	Emission Level (dBμV/m)	Limit (dBμV/m)	Polarization	Detector	Measurement Uncertainty (dB)
40.557	31.3	40	V	Peak	<±3.04
71.532	36.2	40	V	Peak	<±3.04
212.861	32.3	43.5	V	Peak	<±3.04
375.013	38.7	46	V	Peak	<±3.04
504.152	27.5	46	V	Peak	<±3.04
875.016	29.5	46	H	Peak	<±3.04

Frequency range 1 - 40 GHz

The results in the next tables show the maximum measured levels in the 1-40 GHz frequency range.

The Low, Middle and High Channels were measured for out-of-band emissions for the worst mode.

Spurious frequencies with peak levels above the average limit (54 dBμV/m at 3 m) are measured with an average detector for checking compliance with the average limit.

- **Mode 802.11 a20** (worst case)

- LOW CHANNEL. Spurious frequencies detected at less than 20 dB below the limit:

Spurious frequency (GHz)	Emission Level (dBμV/m)	Limit (dBμV/m)	Polarization	Detector	Measurement Uncertainty (dB)
1.2513	49.42	68.23	V	Peak	<±2.72
1.37483	49.07	68.23	V	Peak	<±2.72
8.50253	49.71	68.23	V	Peak	<±4.72
10.36138	67.16	68.23	V	Peak	<±4.72

- MIDDLE CHANNEL. Spurious frequencies detected at less than 20 dB below the limit:

Spurious frequency (GHz)	Emission Level (dBμV/m)	Limit (dBμV/m)	Polarization	Detector	Measurement Uncertainty (dB)
1.12494	47.09	68.23	V	Peak	<±2.72
1.37538	47.46	68.23	V	Peak	<±2.72
8.52843	50.71	68.23	V	Peak	<±4.72
10.40268	68.05	68.23	V	Peak	<±4.72

- HIGH CHANNEL. Spurious frequencies detected at less than 20 dB below the limit:

Spurious frequency (GHz)	Emission Level (dBμV/m)	Limit (dBμV/m)	Polarization	Detector	Measurement Uncertainty (dB)
1.12494	48.38	68.23	V	Peak	<±2.72
1.37501	49.57	68.23	V	Peak	<±2.72
6.99971	45.2	68.23	V	Peak	<±4.72
8.53018	49.37	68.23	V	Peak	<±4.72
10.47898	67.96	68.23	V	Peak	<±4.72

Verdict: PASS

SISO CORE-0_Port3 Antenna:

FREQUENCY RANGE 30 MHz - 1 GHz

This plot is valid for the Low, Middle and High Channels and all the modulation modes.

- **Mode 802.11 a20.**

FREQUENCY RANGE 1 – 6.5 GHz (worst mode)

- Low Channel:

Note: The peak shown in the plot above the limit is the carrier frequency.

- Middle Channel:

Note: The peak shown in the plot above the limit is the carrier frequency.

- High Channel:

Note: The peak shown in the plot above the limit is the carrier frequency.

FREQUENCY RANGE 6.5 - 17 GHz. (worst mode)

- Low Channel:

- Middle Channel:

- High Channel:

FREQUENCY RANGE 17 - 26 GHz

This plot is valid for the Low, Middle and High Channels and all the modulation modes.
